TO

PEKIN. CHAP.

Occurrences at Pekin, Audience of the Ambassador, &c.

companied with the master of the ceremonies, and five Jesuits, came to compliment the ambassador. As soon as they entered the gate, two of their attendants walked before them, at some distance, making a humming noise, the usual sign that some person of distinction is coming. Aloy desired the ambassador would give him a copy of his credentials; which was Vol. II.

not easily complied with, till these ministers absolutely insisted on it; alledging that the Emperor never received any letters from his best friends, among whom he reckoned his Czarish Majesty the chief, without knowing the contents. The Latin copy was at last produced, the original being in the Russian language; and the master of the ceremonies and the millionaries having translated it into Chinese, took their leave. But the aleggada remained for the space of three hours, talking on different subjects. This minister, it seems, was a great sportsman. He asked to see the ambaffador's dogs, which were a few greyhounds, and fome French buck-hounds. He was desired to receive, in a present, any of them which pleased him best; but he would accept only of a couple of greyhounds.

In the mean time, the Emperor sent an, officer to inquire after the ambassador's health; who brought along with him a table, carried by four men, and covered with yellow silk, on which was placed va-

3

riety of fruits and confections, and, in the middle, a large piece of excellent mutton. The officer acquainted the ambassador that these provisions were brought from the Emperor's own table, and therefore hoped he would cat of them. This circumstance was accounted a singular mark of the Emperor's favour.

The day following, the ambaffador had a vifit from the president of the council for western affairs, called Asschinoma, accompanied by four millionaries, two of which were Meffieurs Paranim and Fridelii. The conversation turned chiefly on the ceremonial of the ambassador's introduction to the Emperor, which was a inatter not cafily settled. The principal points, insisted on by the ambassador, were, that he might deliver his credentials into the Emperor's own hands, and be excused from bowing thrice three times on entering his Majefly's presence; to which custom all must submit who appear before the Emperor. The president, on the contrary, asserted, that the constant practice in China, for many ages past.

past, was directly opposite to these demands; that their Emperors never received letters of credence with their own hands; that the custom was for the ambassador to lay them on a table, at some distance from the throne, or the place where the Emperor may happen to sit: after which they were delivered to the Emperor by the officer appointed for that purpose.

At the same time, the president invited the ambassador to an entertainment, to be given at a palace in the city, where he said the Emperor would be present, and speak with him. His Excellency replied, He would accept of the invitation, provided he might on that occasion deliver the Czar his master's letter. He was told, this was neither a proper place nor time for that purpose; but that the Emperor intended to give him a public audience very soon, and receive his credentials in form.

The ambassador was apprehensive that the Emperor, having already seen a copy of his credentials, should he also see himfelf at the entertainment, his public audience might thereby be retarded; and therefore declined the invitation. It appeared, however, afterwards, that this fuspicion was without foundation, and that the Emperor intended nothing more than to do honour to the ambassador.

The 21st, the aleggada paid a second visit. His servants brought tea ready made, some jars of arrack, with fruits and confections. From this day little material happened, except daily messages from court relating to the ceremonial, till the 27th, when this affair was at last adjusted, on the following terms: "That the am-" baffador should comply with the esta-" blished customs of the court of China; " and, when the Emperor sent a minister " to Russia, he should have instructions to " conform himself, in every respect, to the " ceremonies in use at that court." This affair gave the ministry at Pekin much trouble; and, I must confess, the missionaries took great pains to soften matters on both fides.

On the 28th, the day appointed for the ambassador's public audience of the Emperor, horses were brought to our lodgings for the ambassador and his retinue; the Emperor being then at a country house called Tzan-shu-yang, about six miles westward from Pekin. We mounted at eight in the morning, and about ten arrived at court, where we alighted at the gate, which was guarded by a firong party of foldiers. The commanding officers conducted us into a large room, where we drank tea, and staid about half an hour, till the Emperor was ready to receive us. We then entered a spacious court, inclosed with high brick-walls, and regularly planted with several rows of forest-trees, about eight inches diameter, which I took to be limes. The walks are spread with small gravel; and the great walk is terminated by the hall of audience, behind which are the Emperor's private apartments. On each fide of the great walk are fine flowerplots and canals. As we advanced, we found

1720

found all the ministers of state, and officers belonging to the court, feated upon furcushions, cross-legged, before the hall, in the open air; among these, places were appointed for the ambassador and his retinue; and in this fituation we remained, in a cold frosty morning, till the Emperor came into the hall. During this interval, there were only two or three servants in the hall, and not the least noise was heard from any quarter. The entry to the hall is by seven marble steps, the whole length of the building. The floor is finely paved with a neat checker work of white and black marble. The edifice is quite open to the fouth; and the roof supported by a row of handsome wooden pillars, octangular, and finely polished; before which is hung a large canvass, as a shelter from the heat of the fun, or inclemencies of the weather.

After we had waited about a quarter of an hour, the Emperor entered the hall at a back-door, and feated himself upon the throne; upon which all the company stood.

stood. The master of the ceremonies now desired the ambassador, who was at some distance from the rest, to walk into the hall, and conducted him by one hand, while he held his credentials in the other. Having ascended the steps, the letter was laid on a table placed for that purpose, as had been previously agreed; but the Emperor beckoned to the ambassador, and directed him to approach; which he no fooner perceived, than he took up the credentials, and, attended by Aloy, walked up to the throne, and, kneeling, laid them before the Emperor, who touched them with his hand, and inquired after his Czarish Majesty's health. He then told the ambassador, that the love and friendship he entertained for his Majesty were such, that he had even dispensed with an established custom of the empire in receiving his letter.

During this part of the ceremony, which was not long, the retinue continued standing without the hall, and we imagined, the letter being delivered, all was over. But

the master of the ceremonies brought back the ambassador, and then ordered all the company to kneel, and make obeisance nine times to the Emperor. At every third time we stood up, and kneeled again. Great pains were taken to avoid this piece of homage, but without success. The master of the ceremonies stood by, and delivered his orders in the Tartar language, by pronouncing the words morgu and boss; the sirst meaning to bow, and the other to stand; two words which I cannot soon forget.

This piece of formality being ended, the master of the ceremonies conducted the ambassador, and the six gentlemen of the retinue, with one interpreter, into the hall. Our clerks, inferior officers, and servants, remained still without, together with many courtiers and officers of distinction. We were seated on our own cushions, in a row upon the sloor, to the right of the throne, about six yards distance: And, immediately behind us, sat three missionaries, dressed Vol. II.

in Chinese habits, who constantly attend the court. On this occasion they served by turns as interpreters.

Soon after we were admitted, the Emperor called the ambassador to him, took him by the hand, and talked very familiarly on various subjects. Among other things, he told him, that he was informed his Czarish Majesty exposed his person to many dangers, particularly by water, at which he was much surprised, but defired he would take the advice of an old man, and not hazard his life, by committing himself to the rage of the merciless waves and winds, where no valour could avail. We were near enough to hear this piece of friendly and wholesome advice.

This conversation being finished, the Emperor gave the ambassador, with his own hand, a gold cup-full of warm taraffun, a sweet fermented liquor, made of various forts of grain, as pure and strong as Canary wine, of a disagreeable smell, tho not unpleasant to the taste. This cup was brought

Every

brought about to the gentlemen, and all of us drank the Emperor's health, who obferved, that this liquor would warm us that cold morning. His Majesty also found many faults with our dress, as improper for a cold climate, and, I must confess, I thought him in the right.

On the left side of the throne sat five Princes, fons to the Emperor, together with all the ministers and grandees of the court. The taraffun, however, was handed about to none but ourselves, and the Jesuits behind us. Eight or ten of the Emperor's grandsons now entered the hall. They were very handsome, and plainly dressed, having nothing to distinguish them, but the dragon with five claws, woven into their outer garments, and a yellow tunic of fattin, bearing the same device, with little caps on their heads faced with fable. After them came the musicians carrying their instruments. By this time the hall was pretty full; and, what is furprifing, there was not the least noise, hurry, or confusion.

Every one perfectly knows his own builness; and the thick paper soles of the Chinese boots prevent any noise from their
walking on the floor. By these means
every thing goes on with great regularity,
but at the same time with wonderful quickness. In short, the characteristic of the
court of Pekin is order and decency, rather
than grandeur and magnificence.

The Emperor fat cross-legged on his throne. He was dressed in a short loose coat of sable, having the fur outward, lined with lamb-skin, under which he wore a long tunic of yellow silk, interwoven with sigures of golden dragons with five claws; which device no person is allowed to bear except the imperial family. On his head was a little round cap, faced with black fox-skin; on the top of which I observed a large beautiful pearl, in the shape of a pear, which, together with a tassel of red silk tied below the pearl, was all the ornament I saw about this mighty monarch. The throne also was very simple, being made

of wood, but of neat workmanship. It is raised five easy steps from the sloor, is open towards the company, but has a large japanned screen on each side to defend it from the wind,

The master of the ceremonies, and a few officers of the houshold, were dressed in robes of fate, of gold and filver stuffs, with monstrous dragons on their backs and breafts. Most of the ministers of state were dreffed very plain, having nothing like ornaments about them; a few only had large rubies, Sapphires, and emeralds. These precious stones are cut into the shape of pears, through which a hole is drilled, to fix them on the top of their bonnets. These holes diminish the value of the stones, one half at least, at an European market. I once faw, however, one of these subies, with a hole drilled through it, which was bought at Pekin for a trifle, valued at ten thousand pounds Sterling in Europe. But fuch bargains are rarely to be met with, this being a stone of the first class

class for bigness and purity. As for diamonds, the Chinese, it seems, do not much esteem them; for few diamonds are found in China, and these very rudely cut and shaped, and so, indeed, are all their coloured flones.

It was now about noon, at which time our entertainment began to be served up, (of which I shall also give some account.) There were first brought neat little tables, covered with variety of fruits and confections, and placed before all the company. It seems to be the fashion in this country to bring the defert first, at least that was the case at all the entertainments where I was present. In this, as in many other things, the behaviour of the Chinese is quite contrary to that of the Europeans. Soon after the fruits, the victuals were served in the same manner, and placed on small tables before the guests. They confisted of fowls, mutton, and pork, all very good of their kinds; and the whole was either boiled, or stewed with pickles, but nothing roasted.

from his own table to the ambassador, particularly some boiled pheasants, which were very agreeable.

The music played all the time of dinner. The chief instruments were flutes, harps, and lutes, all tuned to the Chinese taste. There was also some vocal music; an old Tartar, in particular, sung a warlike song, to which he beat time, by striking, with two ivory roads, upon a chime of little bells that hung before him. A young Tartar fung a call to war, dancing at the fame time, and keeping time by drawing the head of an arrow across his shield. Then entered two little girls, who danced and fung while the instruments played. After them came tumblers, who performed various feats of activity in the court before the hall. These were succeeded by wrestlers, fencers, and other performers of the same species. The Emperor sent frequently to the ambassador, to ask how he liked the music, dancing, and other entertainments.

ments. He also inquired about several princes and states of Europe, with whose power by sea and land he was not unacquainted. But, above all, he wondered how the kingdom of Sweden could hold out so long against so great a power as that of Russia. After this conversation, the Emperor informed the ambassador that he would foon fend for him again; but, as the night was cold, he would detain him no longer at present, and immediately stept from his throne, and returned to his private apartments by the same passage he left them. We also mounted, and repaired to our lodgings in the city, so well satisfied with the gracious and friendly reception of the Emperor, that all our former hardships were almost forgot.

The 29th, the Mandarin Tulishin came to our lodgings with two clerks, and took a list of the presents sent by the Czar to the Emperor. These consisted of various rich surs, clocks, repeating watches set in diamonds, mirrors; and the battle of Pol-

czarish Majesty's own hands, and set in a curious frame. The ambassador, at the same time, delivered to the Mandarin, as a present from himself to the Emperor, several toys of value, a sine managed horse, some greyhounds, and large buck-hounds.

Every thing was entered in a book very exactly, even the names and qualities of each particular dog. There was also tied about the neck of each dog a yellow filk-cord, drawn through a hole in a little bit of wood, which hung from the dog's neck, as a mark of its belonging to the court. The Chinese, in general, are very fond of little harlequin dogs that play monkey tricks. A servant of ours had one of that kind, which he sold for an hundred ounces of filver.

The same day, all the fruits and confections of the entertainment given at the audience which remained, were sent to the ambassador's lodgings. They were carried in great state through the streets, covered Vol. II. with yellow filk; and an officer of the court walked before the procession.

Next day, the Emperor fent to our lodgings several large dishes of massive gold, containing a kind of delicate fish, called mu, already dreffed, but in such a manner that I did not know to what to compare it. Also some bowls filled with excellent vermicelli, and a fort of pastry-puffs, baked over the steam of boiling water, exceeding in whiteness any thing of that kind I ever faw. All these things were sent from his Majesty's own table; an honour which he grants but seldom. It seems he was refolved we should have provisions, in abundance; for, besides all these, we received our daily allowance, in which we were by no means stinted.

After dinner, the master of the ceremonies, accompanied with the captain of the
eunuchs, and three Jesuits, came to visit
the ambassador. This eunuch was a great
favourite of the Emperor, on account of
the knowledge he had acquired in mathematics

matics and mechanics. He made the ambaffador a present of a small enamelled gold-watch, and a wind-gun, both of his own making. The Emperor himself is a great lover of the arts, so far, that whoever distinguishes himself in any useful branch of them, is sure to meet with proper encouragement. The eunuch also made a present to the ambassador of a steel to strike sire, and then desired to see the presents, which was granted. At taking leave, Aloy told the ambassador, that the Emperor intended to give him a Chinese dress, which was more convenient and warmer than the European.

December the first, Merin-Sanguin, a general officer, and brother to the first minister of state, came to visit the ambassador. Notwithstanding the high rank of this military gentleman, he had no sword about him; for at Pekin, no person, not even officers and soldiers, except when on duty, wears a sword, or any other weapon in the city.

The day following, the ambassador had a fecond audience of the Emperor at the same palace. On this occasion the Czar's presents were carried to court, by a number of people sent for that purpose. The Emperor viewed them all at a distance; after which they were delivered to an officer appointed by his Majesty to receive them. This audience was held in a private hall within the inner-court, where only the officers of the houshold, and the gentlemen of the retinue were present. We were entertained in the same manner as before. The Emperor conversed very familiarly with the ambassador on various fubjects, and talked of peace and war in particular in the style of a philosopher. In the evening, we returned to the city, in a cold north-wind, which blew the dust about in clouds. Scarcely had we arrived, when the fruits and confections, according to custom, were fent to our lodgings.

This evening, one of the Emperor's grandsons came to visit the ambassador.

He was a genteel youth, about fourteen years of age, and had not above half a dozen of attendants.

Next day, the weather continued cold and frosty. The sky was clear, and a strong wind at north-west, blowing the dust about. I observed that the north-west winds are the coldest in this place; as they come over the vast tracts of ice, and snow in Siberia.

The 4th, there was a fall of snow, to the deepness of seven or eight inches, which was immediately thrown into heaps, and the streets clean swept. This day the missionaries sent a present to the ambassador, consisting of several forts of venison and wild-sowl, and a greater variety of sine fruits and confections than I ever saw in any country, together with a couple of jars of wine made by themselves. Among the fruits there were some species which I had never before seen, particularly a sort of apple, about the size of a common orange, with a smooth skin, of a yellowish colour.

colour, very foft and sweet, or rather luscious; also a fruit about the bigness of a walnut, but quite round, resembling in taste a prune, but far more delicious: It contains a smooth hard stone, and the whole is covered with a thin brownish shell, so brittle that it is easily broken between the finger and thumb. Some of these shells are rough, and others smooth. They serve to prevent the tender fruit from being devoured by birds, and from flying dust; and, what is fomething uncommon, the fruit does not adhere to the shell, but a fmall vacuity is left between them. It is not only pleasant to the taste, but is accounted very wholesome.

The 5th, the ambassador had a third audience of the Emperor, in the palace at Pekin. As some affairs relating to the two Empires were to be discussed, the secretary only, M. de Lange, accompanied the ambassador. After he was introduced, the Emperor told him, he had given orders to the tribunal for western affairs to hear the subject

1720.

subject of his commission, and then retired to his own apartments, leaving his ministers to transact the business, which was soon sinished on this occasion; and the ambassador returned to his lodgings.

The 6th, being St Nicolas's day, a great festival in the Greek church, the ambassador went to the Russian chapel in Pekin to hear divine service. This house stands within the city, under the east wall, and was built by the bounty of the present Emperor Kamhi, on the following occasion.

About the year 1688, there happened a difference betwixt the government of Siberia and the Chinese, about a small fort called Albazin, which the Russians had built upon the banks of the river Amoor. The Chinese alledged the fort was erected on their territories; and, jealous of the approach of such powerful neighbours, made several fruitless representations to the governour of Siberia to have it demolished. The Emperor, at last, impatient of longer delay,

delay, sent an army of above one hundred thousand men, to do by force what could not be accomplished by negotiation. They invested the place on all sides, and raised batteries against it. After a vigorous defence, the garrison, consisting of about three or four hundred Coffacks, was obliged to surrender for want of provisions. No terms could be obtained, and all the Russians were made prisoners of war. In consequence of which they were carried to Pekin, where the Emperor generously affigned them houses apart from the rest of the inhabitants, permitted the free exercise of their religion, and gave them a daily allowance equal with his own soldiers. By this mild treatment they were enabled to build the little chapel which they still possess. The descendants of these prisoners are pretty numerous, and useful to their countrymen, the Russians, as interpreters. I formerly mentioned that these disputes were ended on the following terms ; the prisoners on both sides were to remain unexchanged,

17/20.

The

Vol. II. D

The 7th, we dined at the alleggada's, where we were magnificently entertained. There was no other company but ourselves, and we staid the whole day. This was the most elegant and complete entertainment of any I saw in China.

About ten o'clock in the morning, chairs were fent for the ambaffador and gentlemen of the retinue, and horses for the servants, though the prime minister's house was very near our lodgings. The chairs were carried through two courts, and fet down at the entry into a hall, where the alleggada waited to receive the ambassador. After entering the hall, we were seated on neat cane chairs, with japanned frames, inlaid with mother of pearl. The apartment itfelf was very simple, open to the fouth and the roof supported on that side by a row of well-turned wooden pillars. It had no cieling, but the rafters appeared finely polished, and perfectly clean. The floor was paved with a checker-work of white and black marble; and in the middle of it flood

stoou a large brass chasing-dish, in shape of an urn, full of charcoal. At the entry were placed two large China cisterns, filled with pure water, in which played some scores of small fishes, catching at crumbs of bread thrown into the water. These sistes are about the fize of a minnow, but of a different shape, and beautifully varied with red, white, and yellow spots, and therefore called the gold and filver fish. I never faw any of them out of this country, though, I imagine, they might easily be brought to Europe, as they are by no means of the tender kind. I had about twenty of them standing in a window at my lodgings; in a morning, after a frosty night, I found all the water frozen, most of the fishes stiff, and seemingly dead; but, on putting them into cold fresh water, they all recovered, except two or three.

After we had drunk a dish of tea, a collation of broths and victuals was placed on the tables, intermixed with variety of fruits and confections. Every person had a table apart, and all were served in the same manner. This repast, it seems, was only breakfast, though it might well have passed for dinner.

After this entertainment the alleggada carried us first to see his dogs, of which he had great variety. I formerly observed that this gentleman was a great sportsman, He took greater pleasure in talking of hounds than politics; though, at the same time, he had the character of a very able minister, and an honest man.

We were now conducted through all the different apartments of his house, excepting only those of the ladies, to which none have access but himself, and the eunuchs who attend them. We faw a noble collection of many curiosities, both natural and artificial; particularly a large quantity of old porcelain or China ware, made in China and Japan, and at present to be found only in the cabinets of the curious. They consisted chiefly of a great number of jars of different sizes. He took much pleasure

in telling when and where they were manufactured; and, as far as I can remember, many of them were above two thousand years old. He added, that, both in China and Japan, they had lost the art of making porcelain in that perfection they did in former times; and the fault, in his opinion, lay in the preparation of the materials. These curiosities were piled up on shelves to the very roof of the house, and in such order and symmetry as had a pretty effect.

From the house we went into a little garden, inclosed with a high brick-wall. In the middle of it stood a small bason, full of water, surrounded with several old crooked trees and shrubs; among which I faw that which produces the famous tea. The climate about Pekin being too cold for this shrub, there are only a few bushes of it to be found in the gardens of the curious. I shall not at present enlarge on this useful plant, which appeared like a current-bush, as an opportunity will occur of giving a fuller account of it before I leave

leave this place. There was a walk round the garden, which, together with that in the middle, was covered with small gravel. At each end of the middle walk was a piece of artificial rock-work, with water running under it, through holes so natural they looked as if made by the current of the stream. The rocks were about seven feet high, and shaded with some old bended trees. This garden, and many other things in China, display the taste of the inhabitants for imitating nature.

From the garden we were called to dinner, where we found a plentiful and elegant entertainment, fet out in the finest order, far exceeding any thing of that kind we had seen before. We had no music nor dancing; and the whole was conducted with furprifing decency and regularity. The entertainment lasted about two hours, after which we returned to our lodgings.

This day, our gates were opened to people of all characters, and merchants and others allowed to go in and out at plea-

fure. Though all communication was not prohibited before this time, it was, however, difficult, and not to be obtained witkout permission of the proper officer.

The 8th, we dined at the fouth convent, where the Italian missionaries generally reside. Here all the Jesuits in the place, to the number of ten or twelve, were assembled. We met with a friendly reception, and a most splendid entertainment.

This convent stands within the city, upon a piece of ground given to the fathers by the Emperor. He gave also ten thoufand ounces of filver towards building and adorning the chapel, which is indeed very neat, and handsomely decorated with pictures of faints, and scripture-pieces, by the best hands. An account of this remarkable benefaction of the Emperor Kamhi is cut out; in the Chinese language, in letters of gold, and fixed above the great gate, which makes the place more respected. When we arrived, one of the priests was officiating in the chapel, where were assembled a-

bout one hundred Chinese converts. At dinner we had a few bottles of wine, made in the convent; but I cannot fay it was good, though the grapes were fine, and of an agreeable taste.

After dinner, we were conducted to the Emperor's stables, where the elephants are kept. The keeper asked the ambassador to walk into his apartments till they were equipped; then we went into the court, and saw these huge animals richly caparifoned in gold and filver stuffs. Each had a rider of his back, who held in their hands small battle-axes, with a sharp pike at one end, to drive and guide them. We stood about an hour admiring those sagacious animals; some of them very large, who, passing before us at equal distances, returned again behind the stables, and so on round and round, till there seemed to be no end of the procession. The plot, however, was at last discovered by the features and dress of the riders; and the chief keeper told us there was only fixty of them. The climate

climate about Pekin is too cold for them to breed; and all these were brought from warmer countries. The Emperor keeps them only for show, and makes no use of them, at least in these northern parts. Some of them were brought near to the place where we sat, and made obeisance to us, by kneeling and making a dreadful noise; others sucked up water from vessels, and spouted it through their trunks among the mob, or wherever the rider directed. The fagacity of these animals is most surprising, and approaches so near to reason, that, in this respect, they surpass all the brute creation. After this show, we took leave of the Jesuits, who had accompanied us hither, and returned to our lodgings.

Next day, all the gentlemen dined at the palace of the Emperor's ninth son, in consequence of an invitation from his chief eunuch, who is a great friend to the Ruffia house. As the invitation was not from the Prince, the ambassador would not accept of it. Our entertainment was very

Vol. II.

magnifi-

magnificent, and accompanied with music, dancing, and a kind of comedy, which lasted most part of the day. The comedians were of both fexes; if the women's parts were not performed by boys dreffed like actresses. As the play was in the Chinese language, I could understand nothing of it, except from the gesture and action of the performers. It feemed to be a parcel of detached dissimilar interludes, without any principal end, or unity of design. I shall, therefore, only mention one scene, which appeared to me the most extraordinary. There entered on the stage seven warriors, all in armour, with different weapons in their hands, and terrible vizards on their faces. After they had taken a few turns about the stage, and surveyed each other's armour, they at last fell a quarrelling; and, in the encounter, one of the heroes was slain. Then an angel descended from the clouds, in a flash of lightning, with a monstrous sword in his hand, and soon -parted the combatants, by driving them all

off the stage; which done, he ascended in the same manner he came down, in a cloud of fire and Imoke. This scene was succeeded by feveral comical farces, which to me seemed very diverting, though in a language I did not understand. The last character that appeared on the stage was a European gentleman, completely dreffed, having all his cloaths bedaubed with gold and filver lace. He pulled off his hat, and made a profound reverence to all that paifed him. I shall leave it to any one to imagine, what an aukward figure a Chinese must make in this ridiculous habit. This scene was interrupted, and the performers dismissed, by the master of the feast, from a suspicion that his guests might take offence. The play being finished, we were entertained with jugglers, who exhibited a variety of legerdemain tricks with great dexterity.

The banquet was prolonged the whole day, excepting the time spent in these interludes. No sooner was one course car-

ried off, than another was instantly placed upon the tables, and the whole concluded with deferts of fruits and sweet-meats. One would scarce have imagined, that luxury had made fuch progress among the sober and industrious Chinese. It must indeed be observed, that there is almost no drinking at their entertainments, as they use no liquor on these occasions but tea, and now and then a dram of hot arrack. The Chinese handle the two ivory or wooden pins, which they use instead of forks, with such dexterity, that they can even take up needles with them. In place of napkins they sometimes employ a few square pieces of paper.

Continuation of Occurrences at Pekin, &c.

had a fourth audience of the Emperor, at the palace in the city. This interview was also private, and the ambassador was attended only by his secretary. The Emperor repeated the assurances of his friendship for his Czarish Majesty, talked strongly on the vanity and uncertainty of all human assairs, adding, that he was now an old man, and, by the course of nature, could not live long, and desired to die in

AJOURNEY

18

peace with God and all mankind. At taking leave, each of them was presented with a complete Chinese suit of cloaths, made of strong silk, interwoven with dragons claws, and lined with sable.

The 12th, we dined at the French or western convent, where we again found all the missionaries. The chapel, and other edifices, are handsome, but not so grand as the Italian convent. Father Paranim is president of this convent; he is a man of parts and address, and in great favour with the Emperor. I was informed this entertainment was given at the expence of the court, and had some reason to believe it was so, as it far exceeded what might reafonably be expected from the Jesuits. The Emperor's band of music played all the time of dinner; after which we had jugglers and tumblers of great activity. Among the many feats and tricks performed by these people, I shall only mention two or three, which seemed most uncommon. The roof of the room where we fat was **fupported** fupported by wooden pillars. The juggler took a gemlet, with which he bored one of the pillars, and asked, whether we chose red or white wine? The question being answered, he pulled out the gemlet, and put a quill in the hole, through which run, as from a cask, the wine demanded. After the same manner, he extracted several forts of liquors, all which I had the curiosity to taste, and sound them good of their kinds.

Another of these expert youths took three long sharp-pointed knives, and, throwing them up by turns, kept one always in each hand, and the third in the air. This he continued to perform for a considerable time; catching constantly the falling knife by the handle, without ever allowing it to touch the sloor. The knives were exceeding sharp, so that, had he missed laying hold of the handles, he must infallibly have lost some of his singers.

The same person took a wooden ball, somewhat less than those commonly used

in bowling-greens, with a hole through the middle of it, and a rod two feet long, about the size of a walking staff, pointed at the extremity, to fit the hole in the ball. He then tossed the ball above a yard high, and caught it again upon the point of the rod, not in the hole of the ball, but wherever it happened to meet the point; and, in this manner, he continued to throw up and catch the ball for a considerable time. He now placed the ball upon the point of the rod, taking no notice of the hole, and twirled it round like a top so quickly, that the motion could not be observed. This feemed extremely dextrous, for all the while he played with the ball in appearance; and, when the motion began to flacken, gave it a fresh twirl with his hand, as if the rod and ball had been fastened to each other.

This person also placed a large earthen dish, above eighteen inches diameter, upon the point of the same rod, and twirled it round in the same manner as he did the

ball. During this swift motion, he did not always keep the point in the centre of the vessel; on the contrary, he often held it within three inches of the brim. I shall only mention one instance more.

There were placed erect, upon the pavement of the room, two bambos, which are a kind of cane. The length of them was about twenty-five feet; at the lower end I reckon them to be near five inches diameter, and at the top about the breadth of a crown piece. They were straight, light, and smooth, and each supported by two Two boys then climbed up the poles, without the least assistance; and, having reached the top, stood upright, fometimes on one foot, and sometimes on the other, and then upon their heads. This being done, they laid one hand on the top of the pole, and stretched out their bodies almost at right angles to it. In this posture they continued for a considerable time, and even shifted hands. I observed that much depended on the men who held the poles; Vol. II. F one

one of the two at each pole having it fixed to his girdle, and they kept a steady eye on the motions of the boys. There were about twenty or thirty of these performers, who all belong to the Emperor, and never display their art without his permission. I am fully persuaded that, in tricks and feats of dexterity, sew nations can equal, and none excel the Chinese.

After these diversions, we were conducted to the Emperor's glass-house, which his Imperial Majesty often visits with pleasure. It was erected by himself, and is the first manufactory of the kind that ever was in China. The person employed to superintend and carry on this design was Kilian Stumpsf, a German father, lately deceased; a man in great favour with the Emperor, and well known in China for his ingenuity and literature. His Majesty is so fond of this glass-work, that he sent several of the most curious of its productions in a present to his Czarish Majesty. It is surprising that the Chinese, who have been constant1720.

y employed for so many ages in the manu facture of China-ware, should never have stumbled upon that of glass. This shows evidently, that the degree of heat necessary in their ovens must not be very great, or their materials free from land; for it is certain they had no knowledge of glass of any kind till this house was erected. I was informed, that, not long ago, fome Europeans brought to Canton a parcel of prisms, or triangular glasses, which the Chinese took for natural productions of rock-crystal, and bought them at the rate of one hundred ounces of filver apiece: But, from the great quantity imported, they foon discovered their mistake.

On the evening of the 14th, an officer came from court, desiring the ambassador to wait on the Emperor at his palace of Tzangsuang, and bring his musicians along with him. These consisted of performers on violins, trumpets, and kettledrums.

Next

Next day, we arrived at the palace about ten of the clock, and had immediate admittance to the Emperor's private apartments, few being present but the officers of the household and Father Paranim. After a short conference, the music was ordered to play. There were in the room ten or twelve of the Emperor's grandsons, who feemed much entertained with the instruments. I asked an elderly gentleman who flood by me, how he liked the music? he faid it was very good, but their own was better. No ladies were to be seen, though, I believe, several of them were behind a fereen, at the other end of the room.

The music being over, the Emperor ordered one of the princes to conduct the
ambassador into the gardens belonging to
the palace; into which we entered, along
a draw-bridge, over a canal of pure water.
They abounded with shaded walks, arbours,
and fish ponds, in the Chinese taste: The
young princes entertained themselves by
shooting with bows and arrows. Some of

them displayed great dexterity, being accultomed from their infancy to this exercife, which is accounted both genteel and healthy; as the drawing of the bow extends and strengthens the muscles both of the breast and arms. One of the princes shewed us a bow and arrows used by the Emperor when young, by which it appeared that he had been a person of extraordinary bodily strength. After we had surveyed the gardens in every quarter, we took leave of the princes, and returned to the city.

This day, arrived in Pekin Signior Mezzobarba, ambassador from his Holiness the Pope to the Emperor. This gentleman was a cardinal, and patriarch of Alexandria. His retinue was composed of ecclesiastics of different orders, and a few fervants, who were all lodged in the Italian convent. They came from Europe to Macao in a Portuguese ship, from thence to Canton, and then by land to this place.

The design of this embassy was to inquire into the disputes and misunderstanding that had lately arisen in this country betwixt the Jesuits and Dominicans, relating to certain rites annually performed by the Chinese Christians, at the tombs of their deceased parents, or other relations. This custom seems to be the same with that of the parentalia anciently in use among the Greeks and Romans. It is universal in China, from the Emperor to the meanest peasant. It seems the Jesuits permitted their converts to visit the tombs of their relations; alledging, that, without fuch indulgence, no person would embrace Christianity, and that time would wean them from such superstitious ceremonies. The Dominicans, on the other hand, affirmed that it was next to idolatry, and declared it unlawful to allow any fuch custom, strictly prohibiting all conformity in their converts. These differences, in all probability, will not soon be determined. The Emperor himself tried to make the parties compromife

have

ineffectual, he left them to agree or dispute according to their pleasure. He inclined, indeed, to favour the opinion of the Jesuits, which he thought most reasonable. At any rate, it must be acknowledged an instance of uncommon condescension, for an heathen Emperor to interest himself so much in the peace of a Christian church.

The 16th, Mr De Lange and I paid a visit to the Fathers Fridelly and Keaggler, at the Oriental or German convent. This place is large enough; but neither the chapel nor buildings are near so magnificent as those of the two other convents. It is called oriental, because situated in the eastern district of the city. Both these fathers, and several other ecclesiastics of inferior rank in this convent, are Germans. One of the fathers was a clock-maker; and, by fuch means, they frequently infinuate themselves into acquaintance with people of distinction, who protect them in times of danger. For, in China, they

have still a great number of enemies, who would gladly see both them and their resignion extirpated; but the favour of the trefent Emperor hath hitherto prevented or disappointed the design of such persons.

The 17th, I sent to inform the Captain of the Chinese guard, that I intended to take a turn through the city, who immediately gave orders for a foldier to attend me. When we passed through the gate, the clerk marked our names in his book, and dashed them out at our return. I went into several shops, where were sold different kinds of merchandise; particularly those of the goldsmiths, whose business it is to exchange gold for filver, or filver for gold. In these shops are found vast quantities of those valuable metals, cast into bars of different fizes, and piled up one upon another; which are fold only by weight, as there is no current coin in this country; except one small round piece of brass, with a square hole in the middle, through which may be run a string, for the convenience

of carrying them to market. This coin, called joss by the Chinese, is about the value of one tenth of a penny Sterling, and is extremely useful among the common people. With one of them a man can buy a dith of hot tea, a pipe of tobacco, or a dram of brandy, in the streets; and a beggar may dine for three of them. There are, indeed, few beggars to be feen in the city; but, notwithstanding the labour and industry of the inhabitants, they are so numerous, that it is hardly possible to prevent many from being reduced to the utmost necessity. There are cooks shops, where dogs and cats, and fuch other creatures, are dreifed for the entertainment of these people. These coins have Kamhi, the name of the Emperor, on one fide, and the words Tum Pao, or the universal price, on the other.

When the Chinese have occasion to buy any thing above the value of sixpence, they cut off a piece of silver, and weigh it, whick is done in a trice.

Vol. II.

Although the want of current coin seems ill calculated for the despatch of business, the Chinese find no inconvenience on that account. It is in so far preferable to money, that it loses little by wearing in the circulation, which coin does perhaps more than is generally imagined.

In most of the shops I found both men and women unveiled. They were extremely complaisant, and gave me a dish of tea in every shop. These people expose their gold and silver, and other goods of value, with as much freedom and security, as the merchants do in London or Amsterdam.

The 19th, Lange and I went to the French convent, but not one of the ecclesialties were at home, having all gone to attend Signor Mezzobarba at an audience of the Emperor, except an old gentleman, Monsieur Bouvett, who had formerly written a small treatise, entitled, "Le Portrait de l'Empereur de la Chine," which he had printed in Europe.

The 20th, cold and windy.

The 21st, frost and snow, which softened the air, and laid the dust.

Next day, the ambassador, with Secretary Lange, went to the council appointed for western assairs, and had a conference on the subject of his embassy.

The winter here lasts only about two months, but is very sharp and piercing while the wind is northerly. If the wind, indeed, is southerly, the air is mild and pleasant, and the sky clear. I mentioned above, that the Chinese have a method of keeping themselves warm during the cold, which I shall now describe as distinctly as I can.

In building a house, they make two stove-holes, one in each side-wall, about three feet from the gable-end. The holes are a foot square; one serves for receiving the fewel, and the other to let out the smoke, when the stove is sinished. There is a partition of brick, which runs from one side of the house to the other, about

five or fix feet from the gable, and only eighteen inches high, which I shall call the front of the stove-bench. Between/this and the gable are built several other thin partitions of brick, in a direction at right angles to the first, having a small opening at the extremity of each. For example, suppose the passage in the first partition to the right hand, and in the second to the left, and so on, alternately, to the last, which communicates with the hole, on the other fide of the room, for letting out the smoke. These divisions being made, the whole is arched, or otherwise covered with brick; above which is laid a layer of clay, or plaister, to prevent the smoke from rifing through the surface. It is plain that below this bench there will be a winding channel for the smoke, from one fide of the room to the other. A few handfuls of bruth-wood, straw, or any kind of fewel, will warm the bench, as much as is necessary, to work or sleep without feeling cold. It is generally co-

vered

PER TYPE RITA.

vered with mats, felts. or other thick stuffs, according to the ability of the owner.

The 22d, Father Keaggler came to visit This gentleman had been long in China, and was well acquainted with the language, cultums, and manners of the country. In talking of the extent of Perkin, he said that Nankin is at least three times as large. At this rate, Nankin must be one of the largest cities in the world. He added, that it was somewhat diminished fince the court had left that place to reside at Pekin. Nankin is a place of the most extensive commerce, and contains the greatest manufactories, of all forts of filk and cotton stuffs, of any city in the country, besides those of China-ware. It is watered by a fine navigable river, on which are employed an incredible number of boats, in carrying merchandise and passengers.

The 23d, cold northerly wind, and strong frost.

The 24th, Christmas-eve; the ambassa-dor heard divine service in the Russ church.

The

AJOURNEY

The 25th, the ambassador, and the whole retinue went to church.

The Emperor sent Father Fridelly, accompanied by several mandarins, with a present to his Czarish Majesty, of six large boxes of tiles, made of China-ware, sit for such stoves as are used in Russia for warming rooms. They were very pretty, blue and white, and, with due care, may last for ages.

January 1st, 1721, the Emperor's general of the artillery, together with Father Fridelly, and a gentleman called Stadlin, an old German, and a watchmaker, dined at the ambassador's. He was by birth a Tartar; and, by his conversation, it appeared he was by no means ignorant in his profession, particularly with respect to the various compositions of gun-powder used in artificial fire-works. I asked him, how long the Chinese had known the use of gun-powder? He replied, above two thousand years, in fire-works, according to their

their records, but that its application to the purposes of war was only a late introduction. As the veracity and candour of this gentleman were well known, there was no room to question the truth of what he advanced on this subject.

The conversation then turned on printing. He said he could not then ascertain precisely the antiquity of this invention; but was absolutely certain it was much ancienter than that of gun-powder. It is to be observed, that the Chinese print with stamps, in the manner that cards are made in Europe. Indeed, the connection between stamping and printing is so close and obvious, that it is surprising the ingenious Greeks and Romans, so samous for their medals, never discovered the art of printing.

On this occasion, Father Fridelly told me, that several of the missionaries, who had the good fortune to be in favour with the Emperor, had often solicited that Prince to become Christian, and allow himself to A JOURNAY

872L.

be baptised; but he always excused himfelf, by saying, he worthipped the same
God with the Christians; and that such a
change of religion might occasion some
distributed in the empire, which by all
means he would endeavour to prevent.
However this be, it is certain that, on
Christians day, he sent one of his chief eunuclis to the Italian convent, with orders
that prayers should be offered for him;
which was accordingly done, and the eunuch remained in church all the time of
divine service.

Next day, the ambassador had another private audience of the Emperor, at the palace of Tzan shu-yang. The weather being very cold, the hall was warmed with several large chassing dishes, filled with charcoal. We staid above two hours; during which time his Majesty talked very familiarly, on various subjects, particularly history; wherein he descovered himself well acquainted with that of the Holy Scriptures, as well as of his own country.

hat the chronology of the Chine more ancient than that of the Holmes; but observed, that it ended by bulous accounts, concerning which which certain could be determined.

As to how a flood, he affirmed, that, at or near the last time, there was a great deluge in which destroyed all the inhabitants of the plains, but that such as escaped to the manuains were saved.

He then is a field of the invention of the loads and which he said was known in China above two thousand years ago; for, it appeared from their records, that a certain ambastador, from some distant island to the court of China, missing his course, in a form, was cast on the Chinese coast, in the utmost distress. The then Emperor, whose name I have forgot, after entertaining him hospitably, sent him back to his country; and, to prevent the like intercountry; and, to prevent the like intercounters in his voyage homeward. gave him a compass to direct his course.

H

The Emperor also confirmed most of the particulars mentioned above, concerning printing and gun-powder. It is from the Holy Scriptures, most part of which have been translated by the missionaries, that the learned men in China have a quired any knowledge of the western ascient history. And their own records, they say, contain accounts of transactions of much greater antiquity.

At taking leave, the Enperor told the ambassador that he liked his conversation. He desired to be excused for sending for him in such cold weather, and smiling, said, he knew the Russians were not afraid

of cold.

I cannot omit taking notice of the good nature and affability of the ancient monarch on all occasions. Though he was now in the eightieth year of his age, and fixtieth of his reign, he still retained a sound judgment, and senses entire; and to me seemed more sprightly than many of the princes his sons.

The

aird, Mr Secretary Lange and I the French convent, where we Mezzobarba. I never had fo an y of seeing that gentleman at our as nothing passed between him am mbassador but messages of common and compliment.

walls

The arth Lode from our lodgings, through the and went out at the north gate, at we entered on our arrival at Pekin. A proceeded eastward to the end of the north all, and then along the east wall to the same gate, at which I entered, and returned to our lodgings. This tour took me and a half, at a pretty could not; and, at the same rate, I recked I don't have rode quite round the city in than five hours; whence a judgment may be formed of the circumference walls. The fuburbs also are very extentive, especially to the east and four being interspersed with many buy places, all inclosed with brickplanted with cypress, and other

ever-

and

ever-greens, contribute much to beautify the neighbourhood of this great city. The Chinese are extremely attentive to the sencing and ornamenting these groves or burying places; a natural consequence of their uncommon respect for their parents and relations while living, and of their extraordinary veneration for them when dead. Annually, on certain cays, they resort to these groves, carrying provisions along with them, and celebrate a kind of feast, in commemoration of their deceased relations.

I shall give an example of the filial duty of the Chinese, in a story I have often heard affirmed for true. A youth, finding his parents reduced to extreme poverty, and knowing of no means for their relief, went and sold himself as a slave, and, having received the price from his master, immediately brought it to his aged parents. When this was spent, the boy had no other resource than to run away from his master, and sell himself again to abother;

and the ! veri practifed for feveral times, with w, although he knew the felaw in fuch cases.

But this in summer, for in winter

The of various some e Father Rill ! feed

Emperor sent us a present of fine fruits, particularly oranges. On this occasion, told me, that the tree was at Canton, from which the en that the missionaries first sent

fent to Portugal, where it has prosper ed so wonderfully; and, from the place withence it was brought, bears the name of the China-orange, I doubt not, that, with due care, some others of the rare fruits and plants in this country, even tea it self, might be propagated in Europe, or in some of the American colonies.

I cannot tell whether the coffee tree is to be found in China; but I am certain that none of its feeds are prepared and drunk there, as among the Persians, Turks, and Europeans.

The 8th, the weather was much milder, the wind southerly, with a small mizzling rain, enough to lay the disagreeable dust.

Next day, Secretary Lange and I rode through the streets, to the eastern convent, to visit our friend Fridelly. As we passed, we observed a juggler diverting a crowd. On our coming near, he played several tricks with great dexterity. He took an handful of small pence, formerly mentioned, with holes in the middle of them, and laid

softril, one by one, with his finger his he continued to perform, till the was exhausted. After this, he full was exhausted. After this, he full was exhausted. He then took a moule a box, and made it dance upon a box, and made it dance upon the der went in at one link of the chain, went in at one link of the chain, went in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, we want in at one link of the chain, and the chain whence it came down again, the control of the chain was a single ring.

The Emperor came from Tzanthu-yang palace in the city.

The he master of the ceremonies came the ambassador to court on the 15th the fift day of the new moon, and, according to the Chinese computation, the first day the new year. This is one of their highest selftivals; and, what added to the other y of the present, was its being the healthing of a new seculum or space of that years, observed by the Chinese; besides,

besides, the Emperor had reigned all the last seculum, and was now going to enter on the second. On this occasion were to be assembled several Tartar princes, particularly the Kutuchtu, and the Tush-du-Chan, together with many person of distinction from Korea, and all ominions of China. This feast beginn the first day, and continues during the increase of the moon.

The 15th, we went early to court, and found most of the grand es assembled in the court-yard, sitting on their cushions, and a few of them in the great hall. We entered the court at the great gates, which are seldom opened, except on such extraordinary occasions. The Emperor soon came, and seated himself upon his throne, which was more magnificent than that at Tzan-shu-yang, but like it plain and unornamented. His Majesty was dressed in the same manner as at our first audience. We were placed within the hall on the right of the throne, and Signior Mezzobarba, with

the missionaries, at no great distance from us. In the mean time, all the people of distinction who came from distant places, made their nine bows to the ground without the hall: And, as there was not room in the hall to contain one half of the company, many of them remained in the court during the whole time of the audience. Our entertainment was almost the same as at our first andience; which, therefore, I shall not describe.

The Emperor was very chearful, and fent for several of his old acquaintance to speak with him. The Tush du Chan, and some other Tartar princes were placed on the lest of the throne, with the Emperor's sons and grandsons. In a word, this assembly exceeded, in number and quality, any thing of the kind I ever saw. I was in hopes to have seen the Kutuchtu on this occasion; but was informed that the Emperor, who shows great respect to this venerable priest, detained him in his private apartments.

VOL. II.

I

This

1721

This palace occupies a large space of ground, encompassed with an high brickwall. There are several streets for servants and officers of the houshold. Many of the houses are high, and covered with yellow varnished tiles, which appear like gold in the sun. Northward from the palace is a large canal, of an irregular figure, where the imperial family divert themselves by fishing. This canal is artificial; and the earth dug out of it has raised an high bank, from whence you have a full view of the city, and the country adjacent, to a confiderable distance. This mount rises to a ridge, which is planted with trees, resem= bling the wild and irregular scenes of nature that frequently present themselves in this country. The canal and mount are of an equal length, which I compute to be about an English mile. This must have been a work of vast expence and labour; and, it must be confessed, contributes greatly to the beauty of the place.

The 16th was spent in receiving visits of compliment from the ministers and officers of the court, on occasion of the new year.

Next day, the visits were returned by Mr Secretary Lange and Glazunoff, in name of the ambassador.

The 18th, some of the retinue, accompanied with a Chinese friend, went to a great market, held in the suburbs, about a mile without the city to the south-west. Here we found a number of toys, and things of value, both new and second-hand, exposed to sale in the open street.

Near this place stood a magnificent temple, the doors of which being open, we walked into it, and faw, standing at the south end, a monstrous image, about twenty-five feet high, carved and gilt, having twelve arms and hands, a frightful visage, and great goggling eyes. By the touch it seemed to be made of a kind of plaister. This image is called Fo, which signifies God in the Chinese language. Whilst we

walked about in the temple, many people entered, who kneeled and bowed several times to the image; after which they retired, without taking notice of us, or of any body else. In all the lesser temples I had formerly seen, I found a great number of images of inferior deities or reputed saints; but this was occupied by Fo only, without any rival.

From the temple we went to a public tea-house, where we saw many people drinking tea and smoking tobacco, from thence to a tavern, where we dined; and, in the evening, returned to the city.

Next day, I was present at the representation of a kind of farce, in the public street, not far from our lodgings. There were about twenty strollers assembled on this occasion, who entertained the crowd with many legerdemain tricks, and unnatural gestures. The stage was covered with silk-stuff of various colours.

During the festival there are many such stage-plays performed in all the public

ffreets.

MA. TOPEKIN.

streets. You also find often high crosses erected, on which are hoisted a number of pendants, and streamers of party-coloured silks, that make a pretty appearance. At this season all the shops are shut; almost no business is done; and the people go bout, dressed in their best cloaths, as on holidays in Europe.

The 20th, the ambassador, and all the gentlemen of the retinue, were invited to dine, at a public-house in the city, by a young Chinese gentleman: And all of us accepted the invitation, except the ambafsador. Our friend was so polite as to send chairs for his guests about ten of the clock; and, at eleven, we reached the house, which was the largest of that sort I ever faw, and could eafily contain fix or eight hundred people. The roof was supported by two rows of wooden pillars. This tavern consisted only of one apartment, great part of which was filled with long tables, having benches on each fide for the accommodation of the company. During the time

A FOURNEY

time of dinner we were entertained with music, and after it, by a company of players maintained by the house, who daily act player on a stage erected at one side of the room. None but people of fashion come to this place.

When a person intends to treat his friends at one of these houses, he sends previous notice of his design, with a note of the company, and the sum to be laid out on each of them: Agreeably to these orders, things are executed with the greatest punctuality. The expence on each of our company could not be less than three or four ounces of filver, as we staid the whole day, and had a splendid entertainment, consisting of many courses and deserts, prepared and served in the best fashion of the country. I cannot but observe on this occasion also, the order and dexterity with which the servants performed their parts in such a numerous affembly. I shall not pretend to give any account of the play, only that the company seemed highly pleased; and

the

the performers consisted of both men and women, well dressed, and of decent behaviour.

At several tables the people were employed in gaming; some playing at cards, others at dice and draughts. I saw no money among them, though I was informed some of the Chinese play very high. In the evening, we took leave of our hospitable friend, and returned to our lodgings.

The day following, Father Paranim sent us a present of a large sturgeon, and some other fresh sish, brought from the river Amoor. These can only be carried to such a distance in the coldest season, when they are preserved fresh, by being kept frozen among the snow. This method is practised with success in northern countries; for, provided the sish is immediately exposed to the frost after being caught, it may be carried in snow for many miles, almost as fresh as when taken out of the water.

.72

1721.

carefully

The 22d, I went along with our new Chinese friend, named Siasiey, to see a manufactory of China-ware, standing on the bank of the river Yu, about twelve English miles eastward of the city. After arriving at the place, we passed through several shades and houses, where I saw a number of people at work. The ovens, in particular, seemed very curious. But my view was so cursory and superficial, that I could form no judgement of the materials, or manner of making these cleanly and beautiful vessels, which still remain unrivalled by the similar productions of any other nation. I inquired into the truth of the opinion which the Europeans entertain, "that the clay must lie a cen-"tury to digest before it is fit for use;" and was told by a master workman, that a few months preparation was sufficient. So far as I could observe, they made no secret at this place of what they were employed about. I was, however, told, that, to the fouth, the Chinese are more cautious, and

carefully conceal their art from strangers, One thing I firmly believe, that, although the Europeans understood the art of making porcelain, the Chinese would undersell them at every market in the world. This valuable manufacture is carried on in most of the towns in China; and as it is fold but a little above the rate of common earthen-ware in Europe, the materials of which it is composed can neither be rare nor costly. This important branch of trade brings an immense treasure into the country, and affords employment to vast numbers of poor, who otherwise would be useless and burdensome to the public. Befides china, they also make a kind of delf, or earthen-ware, for the use of the lower class of people.

Next day, I happened to meet two gentlemen from the peninsula of Korea. Their physiognomies were nearly the same with those of the Chinese, but their dress different. What surprised me most was, that they were as ignorant of the spoken Chi-Vol. II.

nese language as I was, and delivered themfelves by an interpreter. When they have any thing material to communicate they put it in writing, which is easily understood by the Chinese. They write in the same manner as the Chinese, from the top of the page, in straight lines to the bottom, and with a pencil, like those commonly used by painters.

Korea is a fine country subject to China, situated betwixt the long wall and the river Amoor, and runs out into a point, towards the island of Japan and the Eastern ocean. The country is very plentiful, and abounds with corn and cattle.

CHAP.

C H A P. XI.

Occurrences at Pekin continued; the Festival held at Court on the New Year, &c.

THE 24th, the master of the ceremonies came to invite the ambassador to the festival of the new year, which is always when the moon is at the full, to be held at the imperial palace of Tzang-shuyang on the 20th.

In the mean time, the cold continued very piercing, so that I saw horses, with loaded carriages, cross the ditches, without the walls of the city, upon the ice.

The

M JOURIN EST

1721

The 29th, chairs were sent from court to carry the ambassador, and gentlemen of the retinue; we arrived there in the evening, and lodged in a house near the palace. Near our lodgings was a pretty garden with a canal, on which was a small pleasure-boat. In the middle of the canal was raised an artificial mount, planted with some barren trees, in imitation of nature. We ascended by a winding path to the top of the mount, from whence we had a fine view of all the country around.

The 30th, being the first day of the festival, we went to court. We were met at the gate by the master of the ceremonies, who conducted us to the bottom of the stairs of the great hall, where we took our places in the open court-yard, among a numerous assembly of grandees, whom we found fitting cross-legged on their cushions. After waiting about a quarter of an hour, his Majesty appeared, and seated himself upon the throne; upon which all the company stood. The Chinese made their

bows, as is usual on such occasions, but we were permitted to make our compliments in our own fashion. It seemed somewhat strange to a Briton, to see some thousands of people upon their knees, and bowing their heads to the ground, in most humble posture, to a mortal like themselves.

We were immediately brought into the hall, and the ambassador was conducted to the throne, in order to congratulate his Imperial Majesty on the anniversary of the new year. Our station, on this occasion, as at the first audience, was to the right of the throne. All the princes, the Emperor's sons and grandsons, together with the Tush du-chan, and some other persons of high distinction, were placed to the left, opposite to us. As the customs of the Chinese are, in many instances, quite contrary to . those of the Europeans, so, I have been informed, that, among them, the left hand is the place of greatest honour. After we had drunk a dish of tea, the Emperor beckoned to the ambassador to come to him again,

AJOURNEY

and inquired into the customs and ceremonies at the courts of Europe on festivals of
this nature; adding, at the same time, "he
"had been informed, that, after drinking
the king's health on such occasions, the
"Europeans broke the glasses. He ap"proved, he said, of the drinking part;
"but did not comprehend the meaning of
breaking the glasses;" and laughed heartily at the joke.

The great hall was, by this time, almost full of company; and a number of people of distinction still remained in the area, who could not find room in the hall.

The entertainment now began to be ferved up. The victuals were carried about in great order, and placed before the company on large tables. All the dishes were cold, except those set before his Majesty, who supplied us plentifully with hot provisions from the throne.

Dinner being ended, the sports were begun by a company of wrestlers, composed of Chinese and Tartars. Many of them

PA. TOPERIN.

were almost naked, having no cloaths but tight canvass drawers. They performed their parts in the area before the hall. When any of them was severely bruised by his antagonist, or much hurt by a fall, which frequently happened, the Emperor fent him a cordial, and ordered him to be properly taken care of. Sometimes also, when he perceived the combatants too eager and warm, a fign was given to part them. These instances of humanity were very amiable in the old monarch, and rendered the fight of fuch shocking spectacles more tolerable; for many of these wrestlers received fuch blows and falls, as were fufficient to have knocked the breath out of their bodies.

To the wrestling succeeded many other games and mock-sights, in which the performers, armed, some with lances, others with battle-axes, quarter-staffs, slails, or cudgels, acted their parts with great dexterity.

Then

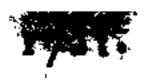

Then appeared two troops of Tartars, clothed in coats of tiger-skins, armed with bows and arrows, and mounted on hobbyhorses. At first, they behaved as enemies; but, after some skirmishes with their arrows, the parties were reconciled, and began a dance to a difinal tune of vocal and instrumental music. The dance was interrupted by a person in a frightful mask, of a tall stature, dressed and mounted like the Tartars, who, they said, represented the devil. After making several unsuccess. ful attacks, on the united body of the Tartars, this formidable hero was at length killed by an arrow, and carried off in triumph. During the dance, each Tartar had a small basket in one hand, and an arrow in the other, wherewith they scraped on the balket, keeping time to the mulic. This scraping sounded a little harsh to an Italian ear; for I could observe Signor Mezzobarba and his retinue similing at the performance.

While the Tartars performed in the court, one of the Emperor's fons, a prince of about twenty years of age, danced alone in the hall, and attracted the eyes of the whole company. His motions were at first very slow, so that he seemed scarcely to move at all; but afterwards became more brisk and lively. The Emperor was chearful, and feemed well pleafed with the different performers; but particularly with an old Tartar, who played on a chime of little bells, with two short ivory rods. The instruments of music were very various, and all tuned to the Chinese taste. The Emperor told the ambaffador, that he knew well their music would not please an European ear, but that every nation liked their own best.

The dancing being over, there was hoisted up a large vessel, resembling a tub, between two posts erected in the area for that
purpose. In the vessel were placed three boys,
who performed many dexterous tricks,
both in the vessel and on the posts, too te-

Vol. II. L

dious

dieus to mention. By this time the sun was set, and the company were soon after dismissed for the night.

Next day, the rejoicings were renewed. We did not, however, go to court before the evening, because the fire-works would not begin till the sun was set. On our arrival, we were conducted through a garden, westward from the palace, in the middle of which stood a large building, with covered galleries all around. Before the house was a canal, having over it a drawbridge. We took our places on the gravelwalk, just under the gallery, where the Emperor fat with his wives and family. Hard by us was the Kutuchtu in his tent. having one of his lamas standing at the door. This priest never once appeared out of his tent during the whole show. All the grandees and Hicers of state were seated on their cushions along the bank of the canal. The machinery for the fireworks was placed on the other fide of the canal;

canal; and nobody was permitted to go thither, except the people who managed it.

About five of the clock a fignal was given for beginning to play off the fire-works, by a social in ity from the callery where the Emperor fat; and, in the pass of a few minutes, many thousand lanterns were lighted. These lanterns were made of paper of different colours, red, blue, green, and yellow, and hung on posts about six feet high, scattered over all the garden; which exhibited a very pleasant prospect to the eye.

Another figual was then given, for playing off the rockets. They sprung upwards to a prodigious height, and fell down in figures of stars, displaying a great variety of beautiful colours. The rockets were accompanied with what I shall call crackers, for want of a more proper name. Their explosion resembled the reports of many great guns, fired at certain intervals, and exhibited a view of many charming colours,

colours, and forms of fire. These, with a few fire works of different kinds intermixed, continued for the space of three hours.

Opposite to the gallery where the Emperor sat was suspended a large round velsel, about twenty feet in diameter, between two posts about thirty feet high. A rocket fent from the gallery lighted a match, hanging from the vessel, which immediately caused the bottom of it to drop down with a loud noise. Then fell out a lettice, or grate-work, all on fire, and hung between the vessel and the ground, burning furiously, in various colours. This continued for ten minutes, and really exhibited a most curious sight. It seems this letticework was composed of materials that immediately kindled, on being exposed to the rair; for no person was seen near the machine.

The grate-work being extinguished, there appeared a lighted match, hanging from the middle of the vessel, and burning up to it. As soon as the sire reached the vessel,

TOPEKIN.

thirty fair paper-lanterns, of various colours, dropped from it, and hung, in a straight line, below one another, between it and the ground; which immediately catched fire of themselves, and formed a beautiful and well proportioned column of parti-coloured light. After this fell out about ten or twelve pillars of the fame form. but of a leffer fize; these also took fire as foon as they dropped. This scene continued till the number of one thousand lanterns fell from the vessel, which diminished. every time, till the last were very small. I must confess this presented a delightful object to the spectators.

I could not help being surprised at the ingenuity of the artist, in crowding such a number of lanterns into so small and simple a machine as this seemed to be; and, at the same time, with so much order, that all of them dropped and kindled of themselves, with equal regularity, as if he had let them fall from his hand; for not even one of them was extinguished by accident, or in

A-JOURNEY

the least entangled by another. This con-

The 31st, in the evening, we returned to court, where was opened a new scene of fire-works, which continued, with great variety, till ten o'clock at night.

The 1st of February, we went again to court, where the fire-works were resumed in many different well executed designs. What pleased me most, was a small mount, raised in the middle of the garden, from which sprung a stream of white and blue fire, in imitation of water: The top of the mount contained a cavity, in shape of a large urn, from which the fire rose to a prodigious height.

Opposite to the galler, where the Emperor sat, were erected three large frames, about thirty feet high each. On one was a monstrous figure of a dragon; on the second a man on horseback; and the third represented an elephant, with a human sigure on his back. All these were composed of a deep blue sire, and were interwo-

TOFERIN.

ven with vines and grapes, hanging about on all sides, of white, red, and blue sire.

Besides these, there were exhibited, on this occasion, many other ingenious designs. of fire-works, which far furpassed any thing of the kind I ever saw, though I have been present at performances of this nature exhibited at St Petersburgh by the best artists in Europe. Besides the art displayed in the contrivance and figure, these works furnished, in particular, a wonderful variety of most beautiful colours, far exceeding my ability to describe. I must confels they far outdid my expectations, and even common fame, which seldom lessens things of this nature.

The following day, the Emperor gave the ambassador a private audience, and inquired how he liked the diversions and fire-works. On this occasion, the Emperor repeated what has been already observed concerning the antiquity of illuminations composed of gun-powder; and added that, although fire-works had been

known

known in China for more than two thour fand years, he himself had made many improvements upon them, and brought them to their present perfection.

The 3d, we returned to the city, in a cold frosty day, and the wind at north-west. We found the rejoicings still going on at Pekin; for stages were erected, and plays represented, in all the principal streets through which we passed.

The affairs relating to the embassy being nearly finished, we began now to prepare for our journey to the westward, which was to take place as soon as the extremity of the cold was abated.

The 9th, three missionaries, Paranim, Demail, and Moran, came to pay their respects to the ambassador, and beg the favour of him, that Signor Nicolai, one of their society, might be permitted to accompany him in his journey to Europe, which was granted, provided it was agreeable to the imperor. The reason of this request was supposed to be, that Signor Mezzobar-

ba

ba having returned to Rome without accomplishing the ends of his embassy, the Emperor, who favoured the cause of the Jefuits, had concerted with them to send Nicolai to the court of room, in order to represent the state of this assair before Mezzobarba could arrive.

Next day, the Emperor sent three officers with presents to his Czarish Majesty; the chief of which were, tapistry for two rooms, neatly wrought on a rich filk stuff; a fet of small enamelled gold cups; some japanned cups, fet with mother of pearl; three flower-pieces, curioufly embroidered on taffety; two chests of rockets, prepared in the Chinese fashion; about twenty or thirty pieces of filk, in most of which was interwoven the dragon with five claws; a parcel of different forts of curious fans for ladies; also, a box containing some rolls of white Chinese paper, the sheets of which were of a fize much larger than common; besides several other toys, scarce worth mentioning. From these particulars

it appears, that these two mighty monarchs were not very lavish in their presents to each other, preserring curiosities to things of real value.

The 11th, several officers came from court with prefents to the ambaffador, and every person of the retinue, corresponding to their different stations and characters; and, fo minutely and exactly was this matter managed, that even the meanest of our fervants was not neglected. The presents, confissing of a complete Chinese dress, some pieces of damasks, and other stuffs, were, indeed, of no great value. They were, however, carried along the streets, wrapped up in yellow filk, with the usual parade of things belonging to the court; a circumstance which is reckoned one of the greatest honours that can be conferred on a foreign minister.

Next day, the Emperor sent to ask the ambassador, whether he inclined to accompany him to a hunting-match, in a forest

not far distant from Pekin; to which his Excellency readily agreed.

The 13th, I dined with one of my Chinese friends, called Fangfung. In going thither, I met in the street two men riding upon asses, with their servants leading them by the bridle. I soon perceived they were Kawlees; which is the name given by the Chinese and Tartars, to the people of Korea, whom I have mentioned above.

The 14th, the weather was very fine and warm.

The 15th, we went to a fair in the suburbs, which is held the first day of every new moon, where we found many things exposed to sale, not commonly tound in shops.

The 16th, the weather being favourable, I took a ride round the walls of the city; which I performed, at an easy trot, in the space of four hours; whereby the compass of Pekin may be nearly computed. The suburbs, especially to the east and south, are very extensive, and, in ma-

93

ny places of them, the buildings are equal to those within the walls.

The 17th, being now on the point of our departure, in order to make the most of the short time we had to stay, I rode about twelve miles eastward from Pekin. accompanied with a Chinese friend, to the banks of the river, which I found crowded with a number of barks, of different fizes, which are constantly employed in carrying provisions, and other stores, to the city, from distant parts of the country. I saw many vessels sailing down the stream, towards the fouth-east. And I was informed there are nine thousand nine hundred and ninety-nine vessels, constantly employed on this river; but why confined to fuch an odd number, I could neither learn nor comprehend. During a month, or fix weeks, in winter, this river is frozen over; at which season, provisions are conveyed by land-carriage, or along the ice.

On this occasion also I visited the China manusactory, in order to try whether I

1701.

93

But, though the people were very complaifant, and showed me every thing I defired them, I returned as ignorant as I went thither; and I am persuaded, that, before a person can get any knowledge of the affair, he must be bred a potter, and have time to inspect its whole progress; of which these people seem to make no secret.

The fields along the banks of the river are well cultivated, producing fine wheat, and other forts of grain. I saw also great plantations of tobacco, which they call tharr, and which yields very confiderable profits, as it is univerfally used in smoking, by persons of all ranks, of both sexes, in China; and, besides, great quantities are fent to the Mongalls, who prefer the Chinese manner of preparing it before every other. They make it into a gross powder, like saw-dust, which they keep in a small. bag, and fill their little brass pipes out of it, without fouching the tobacco with their

fingers.

bliging

fingers. The smoke is very mild, and has quite a different smell from ours. It is reported the Chinese have had the use of tobacco for many ages.

I observed, that, in cold weather, the Chinese chewed a kind of nut, about the bigness of a nutmeg, which they called beetle; it is of an astringent quality. They say, it both keeps them warm, and cleans their teeth.

Next day was spent in preparing for our journey.

On the 18th, all our gentlemen dined with my Chinese friend, named Siasiey, where we met with a friendly reception, and a sumptuous feast. After dinner, our hospitable landlord put about his cups very freely. At last, he took me by the hand, and desired I would let the ambassador return and remain with him; and he would give me my choice of which of his wives or daughters I liked best. I could not but return my friend hearty thanks for his o-

95

bliging offer, which, however, I thought it not proper to accept.

Next day, I went to fee the market where provisions were fold. It was a spacious oblong, spread with gravel, very neat and clean. The butchers had their shops in a shade, running quite round the place. . I saw little beef, but a great deal of mutton. In the middle was great store of poultry, wild-fowl, and venison; but, what surprised me not a little, was to find about a dozen of dead badgers exposed to sale. The Chinese, it seems, are very fond of these animals, which are accounted unclean in other parts of the world. All the Chinese merchants have the art of exposing their goods to fale, dreffed up in the most advantageous manner; and, even in purchafing any triffing thing, whatever the cafe be that holds it, it is half the cost, and often exceeds it in value.

The 21st, being the day appointed for hunting with the Emperor, at one of the clock in the morning, horses were brought

to our lodgings, for the ambassador, and those who attended him. We immediately mounted, and, after riding about fix miles, to the fouth-west of the city, at break of day we reached the gates of the park called Chayza, where we were received by an officer, and conducted through the forest to a summer-house, about a mile from the gate, in which the Emperor had slept the preceding night. This was a small but neat building, having a double row of galleries, open to the forest on all sides, and an avenue leading to it from the gate, planted with several rows of trees. At some distance from the house, we dismounted, and were met by the master of the ceremonies, who conducted us into a gallery. As foon as we entered, the good old Emperor, who had rifen long before our arrival, sent one of his eunuchs to salute the ambassador, and ordered us tea and other victuals. On the fouth side of the house is a canal, filled with clear water, and several large fish-ponds, which make

a great addition to the beauties of this charming place. At a convenient distance from the house, stood about a thousand tents, where the courtiers and grandees had lodged the night before. Breakfast being over, the Emperor, who was very fond of arms, sent to desire a sight of the ambassador's fowling piece. He returned it, with feveral of his own to be thown us. They had all match-locks. The Chinese are posfessed with a notion, that slints, in their climate, acquire a moissure which hinders their firing. But, as far as I could perceive, the air had little effect upon our flints.

A fignal was then given that the Emperor was coming; upon which all the great men drew up in lines, from the bottom of the stairs to the road leading to the forest, all on foot, dressed in their hunting habits, the same with those used by the officers and cavalry of the army, when in the field, and armed with bows and arrows.

We had a proper place assigned us, and You. II.

made our bows to his Majesty, who returned a gracious smile, with signs to follow him. He was seated cross-legged, in an open machine, carried by four men, with long poles rested on their shoulders. Before him lay a fowling-piece, a bow, and sheaf of arrows. This has been his hunting equipage for some years, since he left off riding; but, in his youth, he went usually, every summer, several days journey without the long wall, and carried along with him all the princes his fons, and many persons of distinction, to the number frequently of some thousands, in order to hunt in the woods and deferts; where. he continued for the space of 'two or three months. Their provisions were restricted to bare necessaries, and often to what they caught in the woods of Tartary. This piece of policy he practifed chiefly with a view to harden the officers of his army, and prevent their falling into idleness and effeminacy among the Chinese, and, at the same time, to set a good example of the

aufte-

austerities he recommended, by living on the same hard fare he prescribed to others.

As foon as the Emperor had passed, the company mounted and followed him, at . some distance, till we came into the open forest, where all formed into a semicircle. in the centre of which was the Emperor, having on his left hand about eight or ten of his fons and grandfons, and the ambaffador on his right, about fifty paces distant; close by him were the master of the chace, with some grey-hounds, and the grand falconer with his hawks. I could not but admire the beauty of these fine birds. Many of them were as white as doves, having one or two black feathers in their wings or tails. They are brought from Siberia, or places to the north of the river Amoor.

Our wings being extended, there were many hares started, which the company endeavoured to drive towards the Emperor, who killed many of them with arrows as they passed; those he missed, he made a

fign to some of the princes to purfue, who also killed several of them with arrows; but no other person was permitted to draw a bow, or stir from the line. The same rules of hunting I formerly observed are practifed by the Mongalls.

From the open field, we continued our route westward, to a place among thickets and tall reeds, where we sprung a number of pheafants, partridges, and quails. His Majesty then laid aside his bow and arrows, and carried a hawk on his hand, which he flew as occasion offered. The hawks generally raked in the pheafants while flying; but, if they took the reeds or buthes, they toon caught them.

After proceeding about two or three miles farther into the forest, we came to a tall wood, where we found several forts of deer. The young men went in and beat the woods, whilst the rest of the company remained without. We saw much game pass us; but nobody drew a bow till the Emperor had killed a stag, which he did

10

very dexteroully, with a broad-headed arrow, after which the princes had leave to kill several bucks; among which was one of that species that bears the musk, called kaberda in Siberia, of which I have formerly gives a description.

Chinese musk is stronger, and therefore preserable to that from northern parts.

We had now been fix hours on horseback, and, I reckon, had travelled about fifteen English miles, but no end of the forest yet appeared. We turned short from this wood fouthwards, till, coming to fome marshes, overgrown with tall reeds, we roused a great many wild boars; but, as it was not the feason for killing them, they all escaped. The hunting these sierce animals is reckoned the most dangerous of all kinds of sport, except the chace of lions and tigers. Every one endeavoured to a void them; and several of them run furioully through the thickest troops of horse. The Emperor was so cautious as to have a

company of men, armed with lances, to guard his machine.

We continued the sport till about four g'clock, when we came to a high artificial mount, of a square figure, raised in the middle of a plain, on the top of which were pitched about ten or twelve tents, for the imperial family. This mount had several winding paths leading to the top, planted on each side with rows of trees, in imitation of nature. To the fouth was a large bason of water, with a boat upon it; from whence, I suppose, the earth has been taken that formed this mount. At some distance from the mount, tents were erected for the people of distinction, and officers of the court. About two hundred yards . from it, we were lodged in some clean huts, covered with reeds. The Emperor, from his fituation, had a view of all the tents, and a great way farther into the forest. The whole scene made a very pretty appearance.

As foon as we alighted, the master of the ceremonies was sent by the Emperor to ask the ambassador how he liked their manner of hunting. He made a suitable return, acknowledging, at the same time, the

great honour done him on this occasion.

The Emperor then sent us great plenty of dressed provisions of all kinds; and the officer who brought them pointed out several dishes, which his Majesty sent from his own table, consisting of mutton, venifon, pheasants, and other forts of wild fowl.

After dinner, the Emperor sent two of his chief eunuchs to compliment the ambassador, and inform him, that he intended to entertain him with the baiting of three tigers, which had been kept some time, cooped up in a strong grate-work, for that purpose. The hill where the Emperor's tent stood was surrounded with several ranks of guards, armed with long spears. A guard also was placed before the ambassador's, and the rest of the tents to secure

191

the whole encampment from the fury of these fierce animals. The first was let out by a person mounted on a fleet horse, who opened the door of the coop by means of a rope tied to it. The tiger immediately left his cage, and feemed much pleafed to 's find himself at liberty. The horseman rode off at full speed, while the tiger was rolling himself upon the grass. At last he rose, and growled, and walked about. The Emperor fired twice at him with bullets; but, the distance being considerable, missed him, though the pieces were well pointed. Upon which his Majesty sent to the ambassador, to try his piece upon him; which being charged with a fingle ball, he walked towards the animal, accompanied by ten men, armed with spears, in case of accidents; till, being at a convenient diffance, he took his aim, and killed him on the fpot.

The second was let out in the same manner. The horseman, retiring a little, left the creature rolling upon the grass like the first. first. He then returned, and shot at him with a blunted arrow; which roused the animal to such a pitch, and made him pursue so closely, that the horseman narrowly escaped within the ranks, where the furious tiger, endeavouring to leap over the men's heads, was killed at the foot of the mount.

The third, as foon as he was fet at liberty, run directly towards the Emperor's tent, and was in like manner killed with the spears. A man must be well mounted and armed who hunts this kind of animals in the woods; where they must be much stronger and swifter than these we saw, which had been confined for many months, and whose limbs, by want of exercise, were become stiff and unwieldy; but, notwithstanding this disadvantage, the courage and nimbleness even of these animals was very furprising. I have seen four sorts of them, the tiger, panther, leopard, and lynx, which are all very sierce; but the first is the largest and strongest.

Vol. II.

The Emperor in his youth was very fond of hunting these creatures in the woods of Tartary; but now he confines himself within the limits of the forest, where there is game sufficient to gratify any sportsman.

The killing of the tigers finished the diversion of the day; after which we retired to our huts, where we were entertained with a plentiful supper sent us by the Emperor. After supper, an officer was sent from his Majesty to the ambassador, who brought the tiger's skin he had shot, telling him, that, by the laws of hunting, he had a right to it.

Next morning, the sport was resumed, and varied little from that of the preceding day. About three o'clock afternoon we came to another summer-house in the middle of the forest, where the Emperor lodged the following night, while we lay in a fmall neat temple in the neighbourhood, and were entertained by his Majesty in the same manner as before.

The 23d, about eight of the clock in the morning, the master of the ceremonies waited on the ambassador, in order to conduct him into his Majesty's presence to receive his audience of leave. The Emperor received him in a most friendly manner in his bed-chamber. He repeated his assurances of the great friendship he entertained for his Czarish Majesty, and expressed great respect for the personal merit of the ambassador. After which the ambassador took leave, and we returned to our lodgings in the city."

I shall only observe further, that this forest is really a most delightful place, is well stored with variety of game, and is of great extent, as will easily be conceived from the account I have given of our two days hunting. It is all inclosed with a high wall of brick. The value of this park, so near the capital, shows the magnificence of this powerful monarch.

The 24th, the ambassador was invited, by the president of the college of mathematics,

matics, to see the observatory, which is situated immediately within the east wall, and commands an extensive prospect. The building is not magnificent, but is surnished with a fine armillary sphere, globes, telescopes, an orrery in good order, and other mathematical instruments of the best European workmanship. This college was erected by the present Emperor, who spares no cost to bring it to perfection; and the meanest of his subjects, who discover a genius for science, or any useful art, are sure to meet with due encouragement.

The Chinese are indebted to the present Emperor for what progress they have made in astronomy. He chiesly promoted this study by countenancing the Jesuits and other missionaries; for I have been informed that, before their arrival in this country, the inhabitants could scarcely calculate an eclipse. The Chinese, it is indeed pretended, understood astronomy previous to that period; but the knowledge of it was

in a great measure lost during the many fatal revolutions of the empire.

From the observatory we ascended, by a broad rising passage, to the top of the citywall, where we saw about fifteen horsemen riding their rounds, which we were told they performed day and night at stated times. The wall is built of brick, and is about twenty-five or thirty feet high, having embrasures and square towers at equal distances, and a wide deep ditch, which may be filled with water at pleasure. On the top of the wall there is a pleasant walk, broad enough for fifteen horsemen to ride a-breast. I suppose the whole is, perhaps, not composed of solid bricks, but the middle filled up with earth and rubbish.

The 25th, we went to all the three convents, and took leave of our friends the missionaries.

The 26th, the ambassador went to the tribunal for foreign affairs, and received a letter from the Emperor to his Czarish Majesty. On this occasion the president ac-

quainted

fider this letter as a fingular mark of favour to his master, as their Emperors were not in use to write letters of compliment to any prince; or, indeed, to write letters of any kind, except those which contained their orders to their subjects; and that the Emperor dispensed with so material a custom, only to testify his respect for his Czarish Majesty.

The original of this letter was in the Chinese language, and a copy of it in the Mongalian. It was folded up in a long roll, according to the custom in China, and wrapped in a piece of yellow silk, which was tied to a man's arm, and carried in procession before the ambassador. All perfons on horseback whom we met dismounted, and stood till we had passed them. Such veneration do these people pay to every thing belonging to the Emperor.

The same day, the ambassador had a visit from a young gentleman, a descendent of the samous Chinese philosopher Confu-

cius.

cius, whose memory and works are greatly respected in China. From what I could learn of this eminent philosopher, he appears to have been a person of extraording

pears to have been a person of extraordinary parts, extensive knowledge, and exemplary virtue. On account of such rare qualities, his family is still honoured and

esteemed even by the Emperor himself.

C H.A P.

C H A P.

Some account of the present Emperor of China, the Chinese Wall, &c.

EFORE we leave China, I shall make a few general remarks on the people and country, drawn from the best information I could procure; and shall begin with the long wall.

The long, or endless wall, as it is commonly called, encompasses all the north and west parts of China. It was built, about fix hundred years ago, by one of the Emperors, to prevent the frequent incurfions of the Mongalls, and other western Tartars,

Tartars, who made a practice of affembling numerous troops of horse, and invading the country in different places. The Chinese frontiers were too extensive to be guarded against such bold and numerous enemies, who, after plundering and destroying a wealthy country, returned to their own, loaded with spoils.

The Chinese finding all precautions ineffectual to put a stop to the inroads of fuch barbarians, at last resolved to build this famous wall. It begins in the province of Leotong; at the bottom of the bay of Nankin, and proceeds across rivers, and over the tops of the highest mountains, without interruption, keeping nearly along the circular ridge of barren rocks that furround the country to the north and west; and, after running southwards about twelve hundred English miles, ends in impassable mountains and sandy deserts.

The foundation confifts of large blocks of square stones laid in mortar; but the rest of the wall is built of brick. The Vol. II.

whole is so strong and well built as to need almost no repair, and in such a dry climate may remain in this condition for many ages. Its heighth and breadth are not equal in every place; nor, indeed, is it necessary they should. When carried over steep rocks where no horse can pass, it is about fifteen or twenty feet high, and broad in proportion; but, when running through a valley, or croffing a river, there you see a strong wall, about thirty feet high, with square towers, at the distance of a bow-shot from one another, and embrasures at equal distances. The top of the wall is flat, and paved with broad free-stone; and where it rises over a rock, or any eminence, you ascend by a fine easy stone stair.

The bridges over rivers and torrents are exceedingly neat, being both well contrived and executed. They have two storeys of arches, one above another, to afford fufficient passage for the waters on sudden rains and floods.

This wall was begun and completely finished in the space of five years; every sixth man in China being obliged to work himself, or find another in his stead. It is reported, the labourers stood so close, for many miles distance, as to hand the materials from one to another. This I am the more inclined to believe, as the rugged rocks would prevent all use of carriages; nor could clay, for making bricks or cement of any kind, he found among them.

The building of this wall, however, was not the only burden the Chinese supported on this occasion. They were also obliged to keep a numerous army in the field to guard the passes of the mountains, and secure the labourers from being interrupted by their watchful enemies the Tartars, who all the while were not idle spectators.

I am of opinion, that no nation in the world was able for such an undertaking except the Chinese: For, though some other kingdom might have furnished a sufficient number of workman for such an en-

+america

terprise, none but the ingenious, sober, and parsimonious Chinese could have preserved order amidst such multitudes, or patiently fubmitted to the hardships attending such a labour. This furprifing piece of work,* if not the greatest, may justly be reckoned among the wonders of the world. And the Emperor, who planned and completed it, deserves fame, as much superior to his who built the famous Egyptian pyramids, as a performance of real use excels a work of vanity.

Besides the main wall, there are several femicircular walls, which have the long wall for their diameter, at the places least fortified by nature, and at the open passes of the mountains. These are strongly built, of the same materials and architecture with the long wall, and are of confiderable extent, sometimes on one side of the main wall, and fometimes on the other. In these walls are strong gates, constantly defended by a numerous guard. They are intended to prevent a surprise, and stop fudden

fudden irruptions of the enemy. Event these lesser bulwarks seem works of great expence and labour, but nothing in comparison with the long wall.

After the Chinese had finished their wall, they had respite for a considerable time from the invasions of their enemies, reaping the fruits of their labour in peace and quietness. However, about five hundred years ago, the western Tartars found means to get through the wall, and, with a powerful army of horse, entered the country, carrying terror along with them wherever they went. They at last became masters of the greatest part of China, and kept possession of it for many years, till the Chinese, exasperated by their tyranny, took advantage of their negligence, and drove them back with difgrace to their ancient habitations in the deserts. The Chinese now began to re-establish their former government, to rectify disorders, and repair desolations made by the Tartars. From this time they enjoyed long peace, till the

fatal year one thousand six hundred and forty, when the Mantzur Tartars conquered the whole empire of China; which conquest they retain to this day, and, by their prudent management and mild government, seem in a fair way to keep it.

I shall briefly relate in what manner this strange revolution was brought about by so small a nation as the Mantzurs; a people whom the Chinese despised, and who bear no greater proportion to the Chinese than the inhabitants of Wales to the rest of Great Britain.

It happened, during a time of profound peace, that a certain prince of Mantzur, going to fetch his bride, from a place bordering on the province of Leotong, was, without provocation, attacked by a party of Chinese and slain, with most of his attendants, against all laws of justice and good neighbourhood.

The Tartars, though highly exasperated, behaved with uncommon moderation on this occasion. Before proceeding to make reprisals,

reprisals, or taking any step whatever with that view, they fent ambassadors to the court of Pekin, demanding satisfaction for the outrage committed upon one of their princes. The incomplaints were neglected, and the matter, under various pretences, delayed, from time to time, till the Tartars, losing all patience, and positively insisting on an answer to their demands, were affronted, and contemptuously dismissed by the Chinese ministry, to whom the Emperor had referred them. This treatment highly enraged the whole race of the Tartars, who immediately vowed revenge; and having got an army together, entered the province of Leotong, which lies without the wall, wasting all with fire and fword.

Besides this war with the Tartars, several other circumstances concurred to bring about a revolution in the empire; for at the same time there happened a great infurrection in China, which at last became general. The rebels were commanded by

one named Li, who, after having defeated the imperial army sent to oppose him, invested and took Pekin itself. And the Emperor, rather than fall into the hands of his furious subjects, first hanged his daughter, and then himself, on a tree in his own garden.

The Emperor's general, Usangue, still kept the field with the small remains of his troops, but altogether unable to resist the powerful army of the rebels. He therefore retired northwards; and all hopes of success being lost, came to a resolution of calling in the Tartars to his assistance. He promised them many rewards, and particularly the province of Leotong, if by their aid he succeeded in forcing the rebels to obedience. Kum-ti, the Tartar chief, readily hearkened to the proposal, and the terms were soon settled between the parties.

In consequence of this agreement, the new allies joined armies, which were both commanded by the Tartar, and advanced towards reached the gate, Kum-ti, the Tartar prince, died, and left his son, Xungsti, a child of seven years of age, for his successfor. This accident did not retard the progress of the expedition; for this child was left to the guardianship of his uncle, a man of great abilities and address, and perfectly qualified to conduct the important project then on foot.

Immediately after the death of Kúm-ti, the young prince was proclaimed King of the Mantzurs, and commander in chief of the combined army of Tartars and Chinese. In order to magnify the number of Tartars in the army, and consequently render themselves more formidable to the rebels, they luckily fell upon a stratagem, which was, to dress all the Chinese soldiers in Tartar habits: And, at entering the wall, the real Tartars in the army did not exceed eight thousand men, though indeed they were followed by strong reinforcements.

Vol. II.

Q_

When

When they arrived at the wall, the Chinese, who kept guard, seeing a child at the head of such an army, which they imagined to confift wholly of Tartars, were fo furprised, that they immediately opened the gates, without the least resistance, crying out, long live the Emperor. This circumstance, added to the reports of so formidable an army of Tartars, increasing daily by reinforcements, struck such terror into the rebels, that many of them forfook their leader. The Tartars still advanced, and had daily skirmishes and several battles with the rebels, in which the latter were defeated. In the mean time, the guardian took care to leave garrisons in all the towns through which they passed, with strict orders to use the inhabitants with the greatest humanity. Such mild behaviour gained the affection of the nation in general. And thus he proceeded, from one province to another, till the whole empire submitted to his jurisdiction.

The war, which had lasted some years, being now at an end, and peace re-established, the Chinese thanked the Tartars for their good services, and desired they would return to their own country. But the Tartar chief, on various pretents, the layed his departure till such time as he found his party sufficiently strong to fix his nephew, Xungsti, on the imperial throne of China.

Xungsti died a young man, and left his second son, Kamhi, to succeed him. On · finding himself at the point of death, he called for his eldest son, and asked him, whether he would take upon him the government? but, being young and modest, he was unwilling to accept, and begged his father would excuse him on that account. Then Kamhi was called, and asked the same question. He was better instructed. and brifkly answered, he was ready to obey his father's commands, and would take the weight of the government upon him. This answer so pleased the Emperor, that he named

ly, on the death of his father, the was proclaimed Emperor; and his behaviour has shown him altogether worthy of that honour. It is, it seems, agreeable to the laws and customs of China, that the Emperor chuse, for his successor, which of his sons he pleases, without regard to primogeniture.

Although the Emperor's name is Kamhi, the western Tartars call him Boghdoychan, signifying chief governour; but the
Chinese, in talking of him, say Vansuy,
which signifies many times ten thousand
years, meaning, let the Emperor live so
long. This is a high title in the Oriental
phrase. His sons are called Van, signifying ten thousand years, and are distinguished by the names of Van the first, Van the
second, &c. according to their age.

Kamhi, the present Emperor, has about twenty sons, and, it is said, he intends the sourteenth for his successor. He is a prince eminent for prudence and valour, and

had,

had, at this time, the command of an army against the Kalmucks.

Kamhi hath yet the remains of a graces ful person. His countenance is open, his disposition generous, and he gives great application to business; qualities absolutely necessary to manage the great affairs with which he is intrusted. His reign has been long and prosperous, though semetimes disturbed by dangerous insurrections, and open rebellions; but his good fortune and prudent conduct, overcoming all difficulties, restored public tranquillity; and he has now, for a considerable time, enjoyed perfect peace and happiness. Although the government of China is absolute, it requires no small sagacity and skill to rule an empire of fuch extensive dominions, and containing to numerous subjects.

After Kamhi had settled his affairs at home, the first step he took was to gain the western or Mongall Tartars to his friend-ship. The Chinese had no enemies so formidable. The Emperor knew their va-

lour, and had employed many of them in his army, who did him signal services on many occasions. To effect this, he began to form alliances with their princes and chiefs, by intermarriages between their families and his, where these could take place; others he allured by rich presents; so that they are at present little better than his subjects: And, by this master-piece of politics, he succeeded more effectually than if he had employed the whole force of China. The friendship of the western Tartars is of great importance to the Emperor; for they not only supply Pekin with provisions, the produce of their flocks, but, upon any emergency, can bring to his assistance fifty thousand horse on a short warning.

It may easily be imagined, that great armies and strict discipline are necessary to guard so extensive territories, and keep such a numerous people to their duty. The number of soldiers reported to be in the empire is prodigious, and almost incredible.

I am well informed, that the fingle province and city of Pekin contain no less than one hundred and twenty thousand effective men, all well paid, cloathed, and armed.

Notwithstanding the vast revenues which are necessary for the support of the government, the duties on inland trade must be very eafy; for I was told by a merchant, that he could live in the capital, and trade in what branches of business he pleafed, for paying only one ounce of filver annually to the Eniperor. Such easy taxes show the great oeconomy and moderation of Kamhi, whose reign is called the reign of great peace and rest; in Chinese Tayping.

The Tartars call China Kitay, and the people Kitaytzi; but the Chinese call themselves Chum-quotigen, that is, the people of the middle region.

The empire of China is, in a manner, separated from all the rest of the world; fituated in a fine and healthy climate, fur-

rounded

rounded by the ocean to the east and south; by a chain of high rocks and barren mountains on the north and west, along which purs the famous wall as an additional defence. But what, in my opinion, is a greater security to the empire against invaders than any thing yet mentioned, is the barren desert, stretching for several hundred miles westward, where none but Tartars can subsist, and which scarce any regular army can pass. The seas, to the fouth and east, are indeed open, and China might be attacked on that fide; but, I am persuaded, no prince will think it proper to disturb his own repose, and that of such a powerful people, inclined to peace with all their neighbours, and satisfied, as they feem, with their own dominions.

I know but one nation who could attempt the conquest of China with any probability of success, and that is Russia; but the territories of that empire are so extensive in this quarter of the world, as to exceed even the bounds of ambition itself; and and the Russians seem to entertain no desire of extending them farther.

What part of China I saw is mostly plain, interspersed with hills and rising grounds. The whole is pleasant and well cultivated, producing wheat and other grain, together with abundance of cattle and poultry.

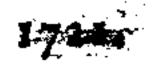

Besides the necessaries, the Chinese have also many of the superfluities of life, particularly sine fruits of various kinds, too tedious to mention. They have likewise mines of gold, silver, copper, lead, and iron. They set a greater value on silver, in proportion to gold, than the Europeans do; so that gold is exported to good advantage.

In China are many navigable rivers and canals, cut to great distances, for the convenience of water-carriage. The merchants are immensely rich by their inland and foreign trade, which they carry on to great extent with the Russians and Tartars, besides the vast sums of money they receive annually from the Europeans, in exchange

for tea, China-ware, and other merchandife. The trade also to Japan, and the neighbouring islands, is very considerable. What is most remarkable in their payments is, that they receive only dollars, crown and half-crown pieces; undervaluing smaller coins, of equal weight and standard, though they melt all down directly into bars of different sizes.

Tea is univerfally used, at all times, and by persons of all ranks. Both the green and bohea grow on the same tree, or rather thrub called by the Chinese tray. The green tea is called trin tray, and the bohea ouy-tray. When the leaves are gathered at the proper season, they are put into large kettles, and dried over a gentle sire, which makes them crumple up, and prevents their crumbling to dust; which they would infallibly do, without this precaution.

What is designed for bohea is mixed, in drying, with the juice of a certain plant, which gives it the colour and slavour, and qua-

qualifies that sharpness, which, in constant drinking, is hurtful to some tender constitutions. The cultivating, gathering, dressing, and packing, of this useful plant, must employ a great number of hands, and particularly of old and young people, who would be unfit for harder labour.

The high rates at which tea is fold in Europe are a little furprifing, confidering the prices in China. For, at Pekin, the price of the best tea, either green or bohea, is half an ounce of filver the Chinese pound, which is equal to what it would be at two shillings a pound in England. And, allowing the freight and duties to be high, vet the profits feem somewhat extravagant. I shall only add, on this subject, that the tea commonly fold at Pekin is preferable in quality to what is imported to Europe from Canton; and that the Chinele drink it without fugar, though fugar is a produce of the country, and confequently very cheap.

brought to great perfection, especially that of weaving silk, damasks, and other stuffs, which are partly worn by the natives, and partly exported. Silks are the common dress of the better fort of people, of both sexes, and coarse cotton-cloth that of the lower class. They use almost no woollen cloths, because, they say, in their climate, they gather too much dust. They have great abundance of raw silk. They make no mushins, nor sine chints; neither are these much used.

The Chinese, it is well known, are excellent performers in several mechanic arts, particularly as potters, dyers, japanners, joiners, and paper makers. In the article of paper making they excel even the Europeans.

Their workmanship in metals is but clumfy; except only founding, at which they are very expert. The arts of statuary, sculpture, and painting, have made but small progress among them. They have excel-

excellent water-colours of all forts, but none in oil. The chief study of their painters seems to be landskip painting; and I have seen some of their performances in this way very natural.

They have many quarries of fine marble, of different colours; but not so much as a fingle statue is to be seen in the Emperor's garden.

The making of clocks and watches was lately introduced, under the protection of the prefent Emperor; who, at his leifure hours, amuses himself with whatever is curious, either in art or nature.

The Chinese are a civilized and hospitable people, complaisant to strangers, and to one another; very regular in their manners and behaviour, and respectful to their superiors; but, above all, their regard for their parents, and decent treatment of their women of all ranks, ought to be imitated, and deserve great praise. These good qualities are a natural consequence of the so-

briety, and uniformity of life, to which they have been long accustomed.

The general regularity and decency of manners among the Chinese, is obvious to all who fee and observe them with the least attention. And, as they are singular in many things, beyond most other nations, they are so, likewise, in this point of polity, which I cannot omit taking notice of in my transient remarks.

It may cafily be imagined, that, in so populous a city, there must be many idle persons of both sexes; though, I believe, fewer than in most other cities of the world, even in those of much less extent than that of Pekin. In order to prevent all diforderly practices, as much as possible, the government have thought fit to permit, or connive at, certain places in the suburbs, for the reception and entertainment of prostitutes, who are maintained by the landlords of the houses in which they dwell, but not allowed to straggle abroad. I have been informed, that these ladies of

pleasure have all separate apartments, with the price of each lady, describing, at the same lime, her beauties and qualities, written over the door of her apartment, in fair legible characters; which price is paid directly by the gallant; by which means, these affairs are conducted without noise in the houses, or disturbances in the neights bourhood. Noify brawls are very feldom. hardly ever, known at Pekin. Those who are found offending in this way undergo very severe penalties. It is likewise to be observed, that these houses are calculated for the meaner fort of people only; fo that any person, who hath the least regard to his credit or reputation, carefully avoids being feen in them.

I must, however, take notice of one shocking and unnatural practice, which appears more extraordinary in a country so well regulated and governed as China; I mean that of exposing so many new born infants in the streets. This, indeed, is only done by the poor, who have more wives

than they can maintain. To prevent the death of these children, there are public hospitals appointed for their reception, and people sent out through the streets, every morning, to pick up, and carry thither, such children as they find exposed. The missionaries also send out people to take up such as have been neglected, who are carried to a private hospital, maintained at their charge, and educated in the Christian religion. And of such persons do the greatest part of the Chinese Christians consist.

I shall now make a few remarks upon the ladies, who have many good qualities besides their beauty. They are very cleanly and modest in their dress. Their eyes are black, and so little, that, when they laugh, you can scarce see them. Their hair is black as jet, and neatly tied up in a knot, on the crown of the head, adorned with artisticial slowers of their own making, which are very becoming. The better fort, who are seldom exposed to the air, have tpet.

have good complexions. Those who are inclined to the olive, take care to add a touch of white and red paint, which they apply very nicely.

The ladies of distinction are seldom permitted to stir abroad, except to visit their nearest relations; and, on these occasions. they are always carried in close chairs, and attended by their servants. The women of all ranks stay pretty much at home. The smallness of their feet, which renders them unable to walk to any confiderable diftance, makes their confinement less disagreeable. As foon as a girl comes into the world, they bind her tender feet with tight bandages, which are renewed as occasion requires, to prevent their growing. This custom prevails universally, the Tartar ladies residing in China only excepted, who appear to have no inclination to conform to this fashion.

This fashion was introduced into China by a great Princess, who lived some ages ago. She was a Lady of extraordinary Vol. II.

beauty and virtue, and has obtained the reputation of a faint; but, it is reported, her feet resembled those of birds; on which account she kept them always carefully wrapped up, and concealed even from the Emperor her husband. The ladies of the court followed her example, which, of course, soon became general. The Chinese women never pare their nails, but suffer them to grow to the full length. This proves no impediment in embroidery, and other needle-work, in which they are constantly employed. These they finish with extraordinary neatness, as fully appears from some specimens of them brought to Europe.

The Chinese deserve great praise for their patience in finishing completely every thing they undertake. And, what is still a greater recommendation, their labours are not the effect of whint or caprice, but calculated to serve some useful purpose. The public works about the city of Pekin are instances of these observations. The streets,

They are spacious, neat, and straight. The canals which supply the city with water have, at proper distances, commodious stone-bridges over them; and these canals are not only built with free-stone on the sides, but the bottoms of them paved with broad cut-stones, in the neatest manner imaginable. There are but sew springs of soft water in Pekin. And the water, in general, though a little brackish, is by no means unwholesome.

The Chinese are generally of a middle size, and slender make, but very active. They are honest, and observe the strictest honour and justice in their dealings. It must, however, be acknowledged, that not a few of them are much addicted to knavery, and well skilled in the arts of cheating. They have, indeed, found many Europeans as great proficients in that art as themselves. And, if you once cheat them, they are sure to retaliate on the first opportunity.

As to the religion of the Chinese, I cannot pretend to give a distinct account of it. According to the best information I could procure, they are divided into several sects, among which that of the Theists is the most rational and respectable. They worship one God, whom they call Tien, the Heaven or the highest Lord, and pay no religious homage to the images of their countrymen. This feet has subsisted for many ages longer than Christianity, and is still most in vogue; being embraced by the Emperor himself, and most of the grandees, and men of learning. The common people are generally idolaters. The few Jews and Mahometans residing here are supposed to have entered China about fix or seven hundred years ago, in company with the western Tartars. There is a very inconsiderable sect, called Cross-worshippers. They worthip the holy cross; but have lost all other marks of Christianity; which makes it probable the gospel was preached in this country before the arrival of the missiona-

TOPEKIN.

ries, but by whom is uncertain. The Christians at present are computed to amount to one hundred thousand, of both sexes. I have been told, the Chinese have also some Atheists among them.

I had several opportunities of talking with their physicians. They generally both prepare and administer their own prescriptions, and are very little acquainted with the medicinal fystem practised in Europe. As they have but few chymical preparations, their chief study is the virtues of plants, which they apply on all occasions, and often with success. They feel the patient's pulse for four or five minutes, and very seldom let blood, even in high fevers. They compare a fever to a boiling pot, and choose rather to take the fire from it than diminish the quantity of liquor it contains, which would only make it boil the faster. Bathing and cupping are much practiced; and they even apply fire, in fome cases, particularly for pains in the joints, and gouty disorders. On these oc-

calions.

casions, they apply a lighted match, composed of the downy substance that grows on mugwort to the part affected; which making a scar, either entirely removes or considerably mitigates the pain.

I cannot but take notice, on this occasion, of a famous plant, called Gingsing, which grows in the province of Leotong. The root of this plant is so much esteemed for its physical virtues, that it is gathered by people appointed by the Emperor for this purpose only, and is valued at the rate of about twenty-five pounds Sterling the pound weight. It is so rare, that the Emperor sent two pounds of it only in a prefent to his Czarish Majesty. There are two forts of it; one looks as if candied. the other like small parsley roots, and has something of the same taste. They slice down or pound it; and, after infusion and flight boiling, give it to the patient. I could never learn from their physicians what specific qualities this plant possessed, only that it was of universal use. I have

heard

circum-

1721.

heard many stories of strange cures performed by it; that persons seemingly dead have by its means, been restored to health. I believe, indeed, it may be a good restorative plant; but, if it really has any extraordinary virtues, I could never discover them, tho' I have made many experiments on it at different times. I should imagine this rare plant might be cultivated, with success, in the country, where it grows naturally; and it appears improbable the Chinese would neglect such a sovereign remedy.

The great men in China follow the example of the western Asiatics, in keeping eunuchs to attend them, who are their counsellors, and chief considents, on all occasions. Their business is to take care of the women; and, being in a manner detached from the world, they are much respected. Castrating is a trade in China; and so skillful and dexterous are the performers, that sew die under their hands. I knew a man who, being reduced to low

circumstances, sold himself to be made a eunuch, after he was 30 years of age.

The language of the Chinese is composed chiefly of monosyllables, and seems to me easily acquired; at least as much of it as is sufficient for conversation. The difficulty of learning their letters, or rather marks for words, cannot be so great as is commonly represented; for you scarce meet a common hawker who cannot read and write what belongs to his calling. It requires, indeed, much labour, and confiderable abilities, to acquire the character of a learned man in China.

I have mentioned above a few only of their manufactures. I cannot omit taking notice of their paper, which is made both of filk and cotton, and is remarkably clean and smooth. They had been in possession of this art for many ages before they had any intercourse with the Europeans, as appears from their records. Their sheets are made larger than any I ever saw in Europe; and, though they generally write with

PERIN.

with hair pencils, I have seen Chinese paper that bore our pens and ink very well.

Their ink, called tou/b, is well known to our painters and designers. I was told the chief ingredient in it is the burnt bones of animals. They have several sorts of it tout the best is very cheap, and is made up in pastes of various sigures, stamped with characters or letters. It is generally put up in little slat boxes, sometimes double the value of the ink they contain.

I shall here insert a specimen of Chinese numbers, and a few capital words, with those of several other Asiatic nations.

The people of Indostan have little or no correspondence with China, being separated from it by impassable mountains, and barren deserts. They call China by the name of Kitat, and the Emperor Amola-Chan.

The Indians call Russia Olt.

The first great Lama, or high Priest, near the borders of India, is called Beyn-

gin-Bogdu; and hath his residence at a place called Digerda.

The second is the Delay-Lama, residing at Lahassar. The Indians call him Tamtzy-Kenna. From Digerda to Lahassar is a month's journey on foot.

The third is the Kutuchtu, called by the Indians Tarranat, who resides at the Urga, not far from Selinginsky.

The present Great Mogul is called Shey-halim Patisha. The Indian married priests are the Brachmans; their monks are called Atheits, and their military men Resput.

The Indian and Tangut numbers, together with these sew notes, I had from the Faquir, at Selinginsky; who told me, that the greatest penance that could be imposed on any of their order, was a pilgrimage to visit these three high priests. Though I have hinted something concerning them, during my stay at Selinginsky, yet, as I shall have no opportunity in suture to learn any thing more about those great men, I think

i 3 3

think it will not be unacceptable that I have inserted the foregoing short notes.

I had, from my early youth, a strong inclination to visit the eastern parts of the world; and Providence afforded me an opportunity, far beyond my expectations, of gratifying my curiofity in the most ample manner. For never, perhaps, were those countries in a more flourishing condition than under the famous Emperors Kainhi and Peter the First; and, perhaps, such another conjuncture of circumstances may not happen for several ages. I have now finished my account of the observations I made during my residence in China; and, had we returned by the same route we went eastward, I thould here conclude my Journal; but, as our route was different, in many places, particularly in our passage by water from Selinginsky to Tobolsky, I shall proceed to make my remarks on fuch places and things only as I have hitherto had no opportunity of mentioning.

C H A P. XIII.

Our departure from Pekin, occurrences, &c. during our journey back towards Mosco.

baggage early in the morning; and, about noon, left the fine city of Pekin, accompanied by feveral Chinese gentlemen, who were to return with Mr de Lange, whom his Czarish Majesty had appointed to remain as his agent at the court of Pekin. In the evening, we reached a large town, called Sangping-ju, where we lodged.

The 4th, Mr de Lange, and our friends, returned to the city, and we continued our journey.

7721. TO PEKIN.

journey. I have already mentioned most of the remarkable towns through which we passed; and, as little happened on the road worth notice, I shall only observe, that we were entertained by the governours in the same hospitable manner, as before.

The 9th, we arrived at Kalgan, the last town of any note, and about three miles distant from the long wall. We staid here two days, in order to provide bread rice, and other provisions, for our journey over the Hungry Desert.

Next day, the governour waited on the ambassador, and invited him to see some Chinese troops perform their exercise. We accordingly walked into an adjacent sield, where we found about four thousand infantry drawn up in six lines. All their guns had match-locks. The sield-officers were on horseback, armed with bows and arrows; but the subalterns on foot, having spears, longer or shorter, according to their rank. All the troops kept a prosound si-

JOURNEY

156

lence, till the commanding-officer ordered the fignal to be given for beginning the exercise, which was done by firing a small gun, mounted on the back of a camel. Upon this fignal, they advanced, retreated, and performed their evolutions, according to the discipline of the country, in a very regular manner. After finishing this exercise, the whole corps at last divided itself into companies of fifty men each, and kneeling as close to one another as possible, continued in this posture for some minutes; they then rose, and running to their former stations, quickly formed themselves, without the least confusion. From what I observed of their motions, I am of opinion they might easily be taught any exercise whatever.

The 12th, we arrived at the gates of the main wall, which we found open. Here the commander, and several officers of the guard, met us, and invited the ambassador to walk into the guard-room, and drink a dish of tea. After this repast, we proceeded

a few miles farther; but, as it was too late to get over the mountains that night, we took up our quarters at a village where we had lodged in going to Pekin.

Next morning early we left the village, and travelled along the banks of a tor. rent, which runs through a narrow valley between the mountains. For convenis ency of the road, we croffed this rivulet feveral times. The weather was very fine and warm; and the face of this country extremely pleafant. On the sides of the rocks we saw scattered many neat cottages, surrounded with little gardens, and crooked trees, which the Chinese have naturally designed on some of their japanned and China-ware. After travelling about a dozen of English miles, we ascended the rocks by a winding-path, formed by art; and, as foon as we reached the fummit, we entered on the plain; for there is little or no descent into the desert from the opening between the rocks. I observed, that all the rivers which spring from the mountains on the north and west of China, run towards the south and south-east; and those that rise westward of the desert, direct their courses through Siberia, to the north and north-west; which makes it evident, that the rocks and desert are higher than any places either in China or Siberia. We now felt a very sensible change in the air. In the morning, we left a warm climate; but here we found the desert all covered with snow. We travelled about five miles farther, and then pitched our tents on the banks of a small rivulet.

The ambassador, considering that to travel along with the heavy baggage would render the journey, at this season, tedious and disagreeable, resolved to leave it under a proper guard, and proceed, by the shortest and speediest way, to Selinginsky. Lomy, our former conductor, being appointed in the same station, was consulted on this occasion, and agreed to make one of our company; while the Chinese guard, commanded by another officer, took care

of the baggage. Our party consisted of the ambassador, Mr Krestitz, myself, and four servants. We packed up beds, and a few necessaries, and set out directly.

We rode very hard all the 14th; and, in the evening, took up our lodgings in Mongalian tent, along with the family. The outfide of the tent was hung round with several pieces of horse-slesh, on which our landlord and his wife supped, and invited us to share their repast; but as wehad provisions of our own, we desired to be excused. The disagreeable smell of this supper made us resolve to sleep in the fields for the future till we came to Selinginsky; for, altho' the nights were somewhat cold and frosty, the weather was dry and pleafant.

Next day, having got fresh horses, we proceeded on our journey. Nothing of moment occurred till the third of April, when we arrived, before noon, on the banks of the river Tola. It was now nineteen days since we left our baggage, during

bows;

which time we rode very hard, changing horses generally three or four times a-day; and this was the first running water we had feen. I cannot help taking notice of the pleasure that appeared in every face at the fight of this stream; and I need not mention how chearfully we regaled ourselves on this occasion. For my own part, I thought the most delicious wines of Ispahan and Thiras not worthy to be compared to this simple element, so little prized by those who enjoy it in plenty. Our bread was all spent some days before; however, we had still some mutton, with which we had been supplied, from time to time, during our journey. All this time we observed no road; but kept mostly about one, or fometimes two days journey to the northward of our former route. The greatest danger attending this way of travelling, arose from the arrows which the Mongalls had fet in firong bent bows, covered with fand, for killing antelopes. One of our horses happened to tread on one of these

bows; the arrow immediately flew out, and, most fortunately, hit the stirrup iron, otherwise the horse or rider would have been killed upon the spot. We had, indeed, guides to conduct us from place to place; but they were unacquainted with any snares laid beyond their own bounds.

This day, about noon, some Mongalls unluckily fet fire to the long grafs before us, which, by means of a strong wind, soon spread to a great distance. We immediately retired to the top of a neighbouring hill, (for now the grounds begin to rife, and the foil is much better near the river), and, setting fire to the grass around us, travelled near a mile in a dismal cloud of finoke. Some of our people who were behind us, and unprovided with flints, were put to hard shifts, having their hair and cloaths all finged. We forded the Tola in pretty deep water, and continued our journey through pleasant valleys, between gently rifing hills, some of whose Vol. II. X tops

FJOURNEY

tops were adorned with woods, which looked as if planted by art.

Nothing worth mentioning occurred till the morning of the 6th of April, when we reached the river Iro, but found the ford so frozen that we could not ride it. As our provisions were now nearly all spent, and we were quite tired of lying in the open air, we wanted to pass the river at any rate. After long search for a ford, we at last found a place clear of ice, but excessively deep. We immediately stripped off our cloaths, mounted our horses, and fwam across the river, which was at this place about forty yards broad. After getting all safe to the other side, we lighted a great fire of sticks to dry and warm ourfelves, and then let forward to the rivulet Saratzyn, the boundary between the Rufsian and Chinese territories, which we reached in the evening. From the Tola to this place we had feen no inhabitants, but here we found a few Mongalls, subjects of Russia, who hospitably entertained us with such fare as the place afforded.

The 7th, we set out early, and at noon came to a zimovey, (a single house built for the accommodation of travellers), inhabited by a Russian, who entertained us with good bread, and other homely fare. After a short stay we mounted, and at night came to another of these houses, belonging to the commissary, Mr Stepnikoss, of the caravan, where we were well provided with necessary accommodations.

Next day, we arrived in good health at the town of Selinginsky; and all of us had good reason to return our most grateful thanks to the Almighty Disposer of all events, who conducted us safe through so many dangers, without the least accident befalling any of our company.

The 12th, the ambassador having made the conductor an handsome present, and thanked him for his trouble and obliging behaviour, that gentleman took leave, and returned to China.

Irkutiky. We lodged every night in villages till the 16th, when we arrived at the Posseller mundlery, situated on the south shore of the Baykall Sea, as formerly observed. The superior received and entertained us with great hospitality, and furnished us horses and sledges for passing the sea upon the ice, which we found perfectly firm, though the people on the south shore were plowing and sowing their oats.

April 7th, having taken leave of the monks, we placed ourselves in the sledges, and drove along a path-way upon the ice. We found several large gaps in the ice, which run for many miles across the sea, and are generally from two to sive or six feet wide. These we passed on long boards, which we were obtained to carry along with us for that purpose. They are made, I conjecture, by the air, which being pent up under the ice, bursts out through these apertures. I observed also a number of small round holes, which are made by the

feste, who come thither for breath and to bask themselves in the sun. These circumstances render travelling on the ice extremely dangerous, except in day-light, and clear weather. Towards evening, the ambassador and myself, being provided with light fledges, put on at a great rate. order to get in with the shore before night. This we happily accomplished, and arrived at a fisherman's house, near the mouth of the Angara; where we found a warm room, and a boar's head, hot from the oven, for supper. But, a little before sunfet, a thick fog arose to the westward, accompanied with terrible thick drifts of snow, which soon covered the road upon the ice, and filled every gap and hole. Our poor people, who had not yet reached the land, were caught in the storm, forced to stop short, and lie on the ice all night, with their horses and carriages. We had, indeed, despatched the fishermen to conduct them to the shore; but the snow continuing to fall very thick, they returned with-

out being able to find them. This disappointment created in us some uneasiness; but there was no remedy. We were obliged to wait patiently till the morning, when they arrived in a very distressed condition, half dead with cold and wet. However, · by proper accommodation, and some warm liquor, they foon recovered. Next day, we fent back the fledges to the monastery; and, after our people had refreshed themselves with a little fleep, about noon, we mounted, and proceeded about four miles, to the small chapel of St Nicolas. We had now passed all the cataracts, and there was no ice to be feen in the river; we immediately, therefore, got boats and rowed down the stream. In the evening, we put ashore at a small village, where we lodged, and were plentifully provided with variety of excellent fresh fish for supper.

The 19th, in the morning, we went again on board; and, about two in the afternoon, landed at Irkutsky, and dined with our old friend, Mr Rakitin, the comman-

dant,

dant, who met us on the river, about two hours before we landed. Some days after our arrival, Mr Ismayloff was seized with a fever, which went off in a few days, without any bad consequences. We waited here for our baggage, which did not arrive till the second of July. During this time. little remarkable happened. We diverted ourselves with hunting and fishing; and, though we lived much at our ease, the time grew tedious, and we wanted much to be gone.

About the 10th of May, the ice began to break up in the Baykall, and continued floating down the river, for fome days, in great shoals. The weather was very hot before the ice came down; but when this happened, an alteration was sensibly felt; for the air about the fides of the river became extremely chilly. A small part only of the ice, about the mouth of the Angara, floats down that river; the rest, being scattered along the shore by the winds, is melted down as the season advances. This is

accounted

the year; as people, notwithstanding all possible precautions, are very apt to catch cold. I have already made some remarks on Irkutsky, and the country adjacent; I shall therefore only add, that, in summer, which is very hot, the country is much pestered with swarms of muskitoes and large gnats, which are so troublesome, that those who have occasion to go into the fields are obliged to wear nets of horse hair, to defend their faces from the attacks of these insects.

July 2d, the barks arrived fafe from Selinginsky, with our people and baggage. They told us many dismal stories of the hardships they had suffered in passing the desert; but, on comparing notes, the disference was not great between their misfortunes and our own.

After our people had rested a sew days, and necessaries were procured for the voyage, on the 5th they shoved off, and rowed down the Angara. The ambassador, my-

TOPERIN

felf, and two servants, staid behind, in order to proceed in a small shallop, which had a little cabin in the stern, and was rowed with ten oars. The commandant caufed it to be built for our use; and as it sailed quickly, and was rowed by our own men, we could purfue the voyage at pleafure, without being confined to attend upon the heavy barks.

The 7th, we went on board, accompanied by the commandant, and feveral other gentlemen, and fell down the river to a monastery in the neighbourhood, where we were invited to dine with the superior, who made us a grand entertainment of excellent fish, and furnished us besides with store of provisions for our voyage. In the evening we took leave of the abbot, and . the rest of our friends; and, being affisted by a rapid current, went down the river at a great rate. At night we put ashore, and took up our quarters in a village.

As little of importance occurred during the progress of our voyage, I need not be

particular in describing it. The banks of the river on both fides are pleafant and fruitful, and beautifully diversified with tall woods, villages, and corn-fields; and we found every where great abundance of fish. But what renders this fine country extremely disligreeable, is the swarms of muskitoes with which every part of it is infested. The gnats, about Ilimsky in particular, are of a much larger fize, and are reckoned more venomous than any in Siberia; but have this good quality, that they never enter houses as the muskitoes do. The Tonguses, when they are angry with any person, wish that an Himsky gnat may sting him. This may appear but a flight punishment, but it marks the character of these simple people.

The 9th, we sailed the whole day, with a fair wind and strong current, and, in the evening, overtook our barks. Next day, we came to a great cataract, called Padun from the steepness of the fall. This fall we passed safely, as there was water enough

upon the rocks for our vessels. The next cataract we met with, which, from its great length, is called Dolgoy, was reckoned more dangerous; for, besides the length and deepness of the passage, it was extremely crooked, winding from one side to another by turns, among rocks and great stones. In passing these cataracts, the pilot fits upon the bow of the veffel, and makes figns with his cap to the people at the helm which way to steer; for the waters, dashing against the rocks and great stones, make fuch an hideous noise, that not a fingle articulate found can be heard. The oars, besides, must be plied very hard, in order to prevent the vessel from running to either fide; for, if once she touches the rocks, all the goods must infallibly be lost, and, perhaps, the men's lives; of which difasters there are many examples.

The 11th, we passed another cataract, called Shamansky, which is reckoned the most dangerous of them all, the channel being very narrow and crooked. Some of

our company chose to walk along the banks, rather than run the risk of passing by water: But they repented of their resolution; for they were obliged to fcramble over rocks, and through thickets, where they faw many vipers, and other venomous creatures. We stopped, at the bottom of the fall, to take them on board, and refresh our rowers. As the ambassador staid on board, I remained along with him.

Besides these three great cataracts, there are many leffer ones, called by the country people Shivers; but, as the paffing them is attended with little danger, I make no mention of them.

It is furprifing that loaded veffels should pals these falls against the stream. They are commonly warped up by means of firong anchors and cables, and on the goodness of the tackle all depends; for thould it chance to give way, all is loft. This is a laborious piece of work, though not very couldy in these parts; and the navigation of this river is attended with no other

173

against stumps of trees hid under the water.

The 14th, we left the Angara, and entered the Tongusky, a mighty stream, formed by the Angara, and another small river called Elim. The Tongusky points to the northward of the west, and is well stored with excellent sish.

We went ashore this day at a little village called Seeza, situated on a high bank of the Tongusky. Here we were met by our old acquaintance General Kanifer, who came from Elimsky to see Mr Ismayloff. I took notice before of having seen this gentleman in our journey eastward. We defpatched our barks, and staid with him two days. After which we proceeded down the river, and he returned to Elimsky by water, attended only by his own fervants: for, though he was a prisoner, he had liberty to go where he pleased, as an escape was impracticable in such remote parts.

The 17th, we set sail with an easterly wind, and a strong current, which carried us along with great velocity. We passed many villages, and some Tongusian huts, upon the banks, to which we made several visits. We found the men generally employed in fishing in their little canoes, and the women in looking after their children and rein-deer, which, at this feafon, lienear the huts, because the gnats will not fuffer them to stay in the woods. In order to banish these troublesome vermin, they light fires all around the place of their abode; and the infects, unable to endure the smoke, immediately fly off. For the same reason, no person stirs abroad without carrying in his hand a fmall earthen pot filled with smoking coals. The canoes skim upon the water very swiftly, but the least touch of an unskilful hand oversets them. The Tonguse places himself on his knees, in the middle of his boat, keeping it as even balanced as possible; and, with a little paddle only, ventures to cross the great-

175

fide a sturgeon of great weight. When a Tonguse wants to go from one river to another, across a neck of land, he takes his boat upon his back, and carries it whither he pleases.

The 19th, we were overtaken with such a heavy shower of rain, in the middle of the river, that, before we could reach the bank, our boat was half full, notwithstanding all hands were employed in rowing, or scooping out the water. However, after much labour and difficulty, we at last got to land, wet to the skin; and, what was much worse, all our bedding thoroughly drenched in water. After we had hauled up our boat, and fastened it to a tree, we went into a thick wood, and kindled a great fire to warm and dry ourselves; but, the rain being abated, a violent storm of wind arole from north-west, so that we were forced to remain all night in this difmal place, at a great distance from any village.

village. In this condition we lay, round a great fire, till next morning.

The 20th, early in the morning, we left the woods, went on board our boat, and proceeded down the river. About noon, we reached a village, on the right hand, where we halted some hours to refresh ourselves, and dry our cloths. In the evening, we pushed off again, and came to another village, where we lodged. On this river are great numbers of water-fowl, of different kinds, which come hither to hatch their young in summer, and fly off, to the fouth, at the approach of winter. I observed also a large fowl, of a grayish colour, about the fize of a kite; after it has hovered for some time upon the wing, if it fpies a fish in the water, it stoops suddenly, strikes its prey, and even dives below water to catch it; after which, it flies to the bank, and eats it.

There are also wild goats upon the rocks along the shore. They are very large animals, with long and thick horns. Their shaggy

haggy coat is brownish, having a black ridge down the back. They have long beards, like common goats, but are twice as large. It is furprifing to fee them leap from one rock to another. They go in pairs about this feason; but, towards winter, retire in herds to the fouth. On the hills, and in the woods, are all forts of game, and wild beafts, natural to the climate.

The 21st, we overtook our barks, and kept in company with them till night, when we arrived at a village, where we lodged. In this river are many islands, some of which are very large, and others furrounded with high rocky shores. Most of them are covered with tall birch and pine-trees, fit for masts to the largest ships, and form a beautiful prospect. We had no need to go ashore in order to seek sport, as we found plenty of wild-ducks, and other, water-fowl, wherever we came. As to · fresh fish, we had more of them, in every village, than we could confume.

Vól. II.

The

The two following days we continued? our voyage, without meeting with any thing worth mentioning, and, on the morning of the 24th, arrived at the conflux of the rivers Yenisey and Tongusky, where the latter loses its name, and, both joined, retain the name of Yenisey. The Yenisey falls into the Tongusky from the south, and its course is then turned northward by the current of the other, which, in my opinion, is the larger of the two. It is observed, that the Yenisey does not afford fuch plenty of fish, nor so good of their kinds, as the other rivers of this country. These two rivers joined form a mighty Aream, among the greatest in the world I think it larger than the Volga at Astrachan. It continues its course to the northwest, daily augmented by other considerable rivers, till it falls into the Icy Sea.

In the evening, we arrived at the town of Yeniseysky, where we were met by our friend Mr Becklimishoff, the commandant, who conducted us first to our lodgings, and

then

1721.

barks also arriving in the evening, the whole company met again at this place, not a little happy at having safely passed the water-falls, and escaped the dangers to which we had already been exposed, tho' we were still above a thousand leagues from the end of our journey.

As we had no time to lose, our baggage was landed next day, and the barks discharged. The packing the baggage for land-carriage took up two days; after which it was transported to a place called Makofsky, on the river Keat, where it was again put on board other barks, which lay ready for that purpose. The road lies to the westward, mostly through thick and dark woods; in dry weather it is tolerably good; but, in heavy autumnal rains, scarce passable. We staid at Yeniseysky, through the persuasion of our hospitable landlord, the commandant, till we heard all was ready at Makofsky.

fituation of Yeniseysky, and the fertility of the soil about it, I shall only add, that the harvest at this place was already far advanced, the barley being all reaped, and the people at work in cutting their oats. This seems very early, in a climate so far to the north, and must proceed from the heat of the summer, and the soil being fertilized by the nitrous particles of the snow, which lies so long upon the ground.

August 2d, we left Yeniseysky on horse-back, accompanied by the commandant, who staid with us all night, at a village about ten miles from town. Next morning, we took leave of our friend, and proceeded to Makossky, where we arrived in the evening, and found the barks ready waiting for us.

The 4th, early in the morning, we went on board, and, pushing off from the shore, rowed down the river Keat. The water being shallow, we made but little way the first day; but, as we advanced, it increased daily,

TOPEKIN.

daily, by rivers and brooks from both sides. Before we left Makofsky, we laid in provisions for three weeks, in which time we computed we would enter the Oby; for, during this long navigation, there is not a single house nor village to be seen, event one religious house, possessed by three or four monks, resembling more an hermitage than a monastery.

The Keat is really a most dismal river. It is not above the slight of an arrow broad, and so overshadowed with tall trees, that you can scarce see the sun. The banks are a perfect wilderness, and so entangled with bushes, that no creature can pass along them but wild beasts; with which these woods greatly abound. Near the edge of the river, we found great quantities of black currants upon the bushes, the largest and best I ever saw. I was told the bears feed much on this fruit.

The river Keat takes its rise from a lake at a small distance from the Yenisey; and, were a canal cut between them, which might fage by water from Verchaturia to the borders of China. But his Czarish Majesty at this time employed in works of the fame nature, of much greater importance to his country.

The Keat runs in a crooked channel, pointing, in general, to the west. The bottom is ouzy, and sometimes sandy. The barks, at first, run often a-ground on the fand-banks, and the people were obliged to get into the water, and heave them off, by main force, with levers and letting pales : besides these little inconveniencies, we were molested with gnats and muskitoes, in this confined place, more than we had formerly been in any part of our journey. They were not, indeed, so numerous as they had been in the heat of fummer; for the nights began to be cold, and the wind northerly. However, no wind could reach us in this close place; and I even wished myself in the desert again, where I might breathe the fresh air. In short, the

appearance of this place put me in mind of the descriptions given by the Poets of the river Styx.

During our tedious voyage down the dark Keat, our only diversion and exercise was shooting wild-ducks. One day Ista Ismayloff and myself went down the river, in a small canoe, rowed by two soldiers, at some distance before the barks. We met with a large flock of ducks, which swam up a narrow creek, in order to avoid us. We sailed a little way after them; and, in the mean time, our barks passed us, and continued before us till night, still imagining they had not overtaken us. This day's sport cost us dear; for, our rowers being quite fatigued, we were obliged to relieve them, and row in our turns, till at last we came up with the barks, both hungry and tired. To make some amends, we had a good dish of wild-ducks for supper.

The 20th, we met with two Offeacks in their canoes, who had come from the river Oby, to catch fish, and kill ducks, and had

their fishing tackle and bows and arrows along with them. We were glad to see any human creature. We called them on board, and they willingly staid with us till we entered the Oby, and supplied us with plenty of fish and wild-fowl. These were the first of the tribe of the Osteaks I had seen. I shall give some account of them when I describe our voyage down that river, on the banks of which they have their habitations.

I formerly mentioned the great abundance of black currants growing on the banks of the Keat. We found them an excellent and wholesome fruit; many of our people eat great quantities of them without the least bad effect.

After a tedious voyage, with little variety, we arrived on the 28th at a village called Ketskoy, a few miles distant from the After procuring, at this place, what necessaries we wanted, and refreshing ourselves a few hours, we continued our voyage, making what way we possibly could, for

for fear of being frozen up, near some defert place on the Oby, before we came to Toboliky, where we intended to land. We had no rain all the time we were upon the Keat; which was a lucky circumstance, as our oars were upon deck. Had our barks drawn only about eighteen inches water, as was intended, we should not have been above fourteen days on this river, and thereby faved much time and labour; but, coming from China, every person in the retinue had a little, which overloaded the vcffels, and retarded their progress. The next day, we entered the famous river Oby, which, from its breadth and depth of water, appears at least equal to the Volga or Yenisey, and could carry ships of considerable burden.

The 30th, we reached the first town upon the Oby, called Narim, fituated on the north bank, about a gun-shot from the river, and a few miles from the mouth of the Keat. It commands a fine prospect, up and down the river, and of the woods A a

to the fouth. Near the town, are a few corn-fields, and garden-grounds, abounding with greens and roots. This place has a small fortress, governed by a commandant. The inhabitants are generally dealers in furs, which they buy from the Osteacks; and either carry them themselves to the borders of China, where they are exchanged for the commodities of that nation, or dispose of them to merchants going thither.

The 31st, we dined with the commandant, and spent the rest of the day in laying in a stock of provisions. We found, at this place, plenty of fine fish, particularly flerlet, iturgeon, and muckfoon, and many more, too tedious to mention. The last is peculiar to the Oby and Irtish.

Here I met with Mr Borlutt, a native of Flanders, who had been a Major in the Swedish service, and sent to this place a prisoner of war. He was a very ingenious gentleman, and had a particular turn for mechanics. The commandant treated

him more like a friend than a prisoner; which, indeed, was the case of most of those unfortunate gentlemen whom the fate of war had sent to this country. His Czarish Majesty, well considering their circumstances, sent them to a plentiful genetry, where they could live at their ease, till peace was restored.

September 1st, having provided ourselves with necessaries, and got new rowers, our former ones returning to Yenifeysky, from whence they came, in the evening we went again on board, and, putting off in fine calm weather, rowed down the Oby at a great rate; our course being much favoured by the rapidity of the current. We passed several villages, and a little monastery called Troytza. The banks to the north are pretty high, but to the fouth flat; by which means, on the melting of the snow in the spring, they are overflowed to a great extent. The river runs towards to the north-west, with little variation. We continued our voyage night

and day, except in great darkness, or a gale of contrary wind, when we were obliged to lie by in some creek.

The Ofteacks I mentioned above differ from all the other tribes of natives in Siberia, both in complexion and language. Many of them are fair, resembling the people of Finland; and they have many Finnish words in their language. Their manner of life is nearly the same with that of the Tonguse, who border with them to the eastward. In summer, they live in the woods, in huts covered with birchen bark. In winter, they dig pits, across which they lay stakes, above them spread earth to keep them warm. They have a fire in the middle, and a hole in the roof to let out the smoke. During this season they live chiefly on fish, dried and smoked, wildfowl, or what elfe they catch in hunting. Many of them are flout fellows, fit for any service. Two of them, with their bows and arrows, a short spear, and a little dog, will attack the greatest bear. They are

dexterous archers, and fishermen. We had always a number of them in canoes round our barks, who supplied us with plenty of fish and wild-fowl, of various sorts, at an easy rate. Give them only a little tobacco, and a dram of brandy, and they ask no more, not knowing the use of money.

The Osteaks, though a savage people in their manner of life, are far from being barbarous; for a single Russian will travel about all their abodes, in order to purchase furs, without fear of any violence. They are also remarkable for their honesty; and the small tribute of surs, which they pay annually to his Czarish Majesty, they bring punctually to the place appointed.

In summer, they wear nothing but coats and short drawers, made of sish-skins, dress-ed after their fashion; but, in winter, are clothed with skins of deer, and other wild beasts.

They have no cattle except rain-deer which supply their children with milk; and

and are, besides, of great service to them on many accounts.

As to their religion, they are ignorant heathers, like the rest of the natives of Siberia. They have many both male and female shamans, who are in great esteem among them. These shamans have many small images, or rather blocks of wood, rudely cut with a knife or hatchet, representing a human sigure, dressed up in rags of various colours, by which they pretend to foretel suture events, such as the good or bad luck of those that go a-hunting. But these are no better than others of the same species, already mentioned, who impose on the ignorance or credulity of their neighbours.

faid concerning these poor savage tribes, it will appear that they are involved in the most profound ignorance. Their manners are so rude, and minds uncultivated, that many of them seem stupid, and altogether unmindful of any thing beyond their prefent employment. I have, however, met with

with men of reflection among them, who agreed with the rest of mankind, in acknowledging one great Almighty Creator of this world, and of every thing else.

The Archbishop of Tobolsky has of late baptised many of the Osteaks, and other natives, in a tour he made through Siberia with that view; and it is to be hoped his successors will follow his laudable example.

CHAP.

133

C H A P. XIV.

Our arrival at the town of Surgute, our journey thence to Mosco, some account of the creature called mammen, &c.

A TTER a voyage of ten days from the town of Narim, during which little remarkable happened, we arrived, on the 11th of September, at another town, called Surgute, fituated on the north bank of the Oby, and defended by a small fort. The inhabitants, like the people of Narim, are mostly traders in furs. The adjacent country, on both sides of the river, is overgrown with dark and tall woods, where there

POPEKIN.

there is no cultivated ground, except a few gardens. Bread is got at a small charge, by water-carriage, from Tobolsky, and other places on the river Irtish.

In the banks of the Oby, about this place, are found great quantities of that kind of ivory called, in this country, mammon's horn. Some of it also is found on the banks of the Volga. Mammon's horn resembles, in shape and size, the teeth of a large elephant. The vulgar really imagine mammon to be a creature living in marshes, and under ground, and entertain many strange notions concerning it. The Tartars tell many fables of its having been seen alive. But to me it appears that this horn is the tooth of a large elephant. When, indeed, or how thefe teeth came for far to the northward, where no elephants can at present subsist during the winter seafon, is what I am unable to determine. They are commonly found in the banks of rivers which have been washed by floods. The commandant of this place had his Vol. II. \mathbf{B} b entry:

entry ornamented with several very large ones, and made me a present of one of them.

I have been told by Tartars in the Baraba, that they have seen this creature, called Mammon, at the dawn of day, near lakes and rivers; but that, on discovering them, the mammon immediately tumbles into the water, and never appears in the day-time. They say it is about the size of a large elephant, with a monstrous large head and horns, with which he makes his way in marshy places, and under ground, where he conceals himself till night. I only mention these things as the reports of a superstitious and ignorant people.

I have observed, in most of the towns we passed, between Tobolsky and Yene-siesky, many of these mammons horns, so called by the natives; some of them very entire and fresh, like the best ivory, in every circumstance, excepting only the co-lour, which was of a yellowish hue; others of them mouldered away at the ends, and,

when

when fawn afunder, prettily clouded. The people make fnuff-boxes, combs, and divers forts of turnery ware, of them.

They are found in the banks of all the great rivers in Siberia, westward of lencousky, when the floods have washed down the banks, by the melting of the snow in the spring. I have seen of them weighing above one hundred pounds linglish. (I brought a large tooth, or mammon's horn, with me to England, and presented it to my worthy friend Sir Hans Sloane, who gave it a place in his celebrated museum; and was of opinion also that it was the tooth of an elephant. This tooth was found in the river Oby, at a place called Surgute).

The 12th, after we had been supplied with a fresh stock of provisions, and fresh rowers, we proceeded towards the next stage, called Samarofsky-Yamm, near the conflux of the Oby and Irtish. The wind being contrary, we made but slow progress. The near approach of winter, which usu-

196

us hasten forward as fast as possible.

Next day, the wind being easterly, we hoisted our sails, and run along at a great rate; and, the 14th, arrived at a fmall village on the north thore. The fouth bank still continued low and flat. At this village we saw great quantities of wild geese, picked, and smoked, and hung in shades, for winter provisions. We had some of them dressed; but I cannot much praise them for agreeable food. The people of this place catch vast numbers of them in day-nets, more on account of the down and feathers, than of their fleth, which is but of small value. We let our barks proceed, and detained a boat to follow them, as foon as we had feen the method of catching the wild geese. The sportsmen conducted us into a spacious open plain. encompassed with wood and water. Here he had his large nets, with wide mashes spread, and a small hut, made of green branches, to conceal himself. Upon the

noyance,

1981.

grafs were feattered about a score of geeleskins stuffed, some of them standing, others fitting, in natural postures. As soon as he fees a flock flying over his head, he calls, with a bit of birchen bark in his mouth, exactly like the wild geefe. On hearing the call, they take a turn round, and then alight among the stuffed skins; which being perceived by the sportsman, he immediately draws a string, and claps the nets over the whole flock, or as many of them as are within their reach. The geese always alight and rife with their heads to the windward; to prevent, therefore, such as escape the day-net from flying off, he has a deep long net, placed on tall sender poles, to windward, which entangles great numbers in their rifing. I am persuaded this method might easily be practised, in other parts of the world, to greater advantage; though, I believe, there are no where such quantities of water-fowl, especially geese of different kinds, as in these northern climates, where, free from annovance, they bring forth their young among woods and lakes, and, at the approach of winter, fly off to the Caspian Sea, and other southern regions.

There is here one species of geese, called kazarky, of a size less than the common wild goose, having beautiful scarlet spots about the head, and some feathers of the same colour in its wings. Of this sort I saw great slocks about the Caspian Sea in winter. Besides these, there are numbers of swans, and all sorts of water-fowl, natural to the climate.

rious forts of wild-fowl, particularly the coc limoge, the heath-cock, and several others too tedious to mention. The manner in which the coc-limoge is caught by the Osleacks is somewhat curious.

They make a paling, about four or five feet high, running from any wood, along a fandy bank, to the edge of the river, having the stakes set so close, that the fowls cannot pass between them. In this palings they

they leave openings, at certain distances, large enough to afford a passage for these birds; and, rather than take the wing, the cock will seek a passage from one end of the hedge to the other. In these openings are set springs, on bent branches, which is soon as touched, sly up, and catch the fowl, either by the neck or seet. The Ofteacks brought us these, and other wildfowl, in great plenty.

The 15th, in fine weather, we continued our voyage, using our sails or oars, by turns, as circumstances obliged us. Little material happened till the 19th, in the evening, when we lest the Oby, and entered the river Irtish; and, night coming on, we put ashore, where we staid till next morning. On entering the Irtish, we had a strong current against our course, which had been down the stream, in all the different rivers, from Selinginsky to this place.

Before I proceed farther, I shall take a view of the famous Oby. It is one of the largest rivers in the world, and runs as long

any other quarter of the globe. It rises in the desert, several hundred miles southward of the Baraba; and is daily augmented, by many streams of different names, till it reaches a place called Belogarsky, where it takes the name of Oby, at the conflux of two large rivers, the Alley and the Tzaritt. These rivers joined, form the Oby. The Oby signifies both in the Russian language. But I am of opinion this river had that name long before Siberia was known to the Russians, as the natives still give it that name.

In going eastward, we passed the Oby upon the ice, at a place called Tzausky Ostrogue, where it made no great appearance, in comparison of what it does after receiving the rivers Tom, Tzulim, Keat, Irtish, and many others, when, indeed, it may be reckoned in the number of the largest rivers in the world. It points generally to the north, with various windings, till it meets the Keat, when it turns

lga i.

to the north-west; and runs in that direction many miles, till, meeting with the Irtish, it turns short, in a rapid current, towards the pole, swallowing up many rivers and brooks in its course, and at last, it discharges itself into the Northern Ocean, at a great bay called Obskaya-Guba; or the Lips of the Oby.

Few rivers in the world contain greater plenty and variety of fish than the Oby. The banks to the fouth produce woods in abundance, interspersed with corn-fields, and good pasturage. I have been informed, that in these parts are rich mines of copper and iron, and even silver.

At the conflux of the Oby and Irtiffa are several large islands, and, farther north, several villages; but only one town of any note, called Bergosa, situated on the left hand.

I may here observe, that geographers generally agree, that a line drawn from the place where the river Tanais, now called Don, discharges itself into the sea of Azof,

or the Black Sea, to the mouth of the Oby, is the proper boundary betwixt Europe and Asia.

The 20th, early in the morning, we shoved off from the shore, and made the best of our way up the Irtish. In the evening, we reached Samariossky-Yamm, where we lodged this night.

Next day, having taken on board fresh labourers, and the wind being northerly, and very cold, we put off in haste, hoisted sail, and went along at a great rate. The wind continuing from this point, was a certain sign that winter was at no great distance, and that we might soon expect to be met by shoals of floating ice.

The 22d, the north wind still continued very strong, to our great joy: For, altho' there are many villages on the Irtish, we dreaded the being frozen up near some desert place.

Next day, there fell a little snow, which softened the coldness of the air; but, at the same time, the wind unfortunately chopped

chopped about to the westward, and retarded our progress.

The 24th, we continued our voyage; and, next day, the wind again becoming northerly, we used our sails all that day and night. We proceeded, without any thing material happening, till the 29th, when we reached Demiansky, a town standing on the eastern bank.

Next day, we set out immediately, after taking in fresh rowers. The sields were now covered with snow, and the frost so strong, that the ice began to stoat in the river, and we expected every day to be frozen up.

These signs of approaching winter influenced Mr Ismayloss to leave the barks,
to follow as should be possible for them,
while himself made the best of his way to
Tobolsky, in a small boat. Accordingly,
carrying me along with him, we immediately set out towards that place.

October the first, we continued rowing along near the banks, and took in fresh

full of great shoals of ice, the frost strong, and much snow. In the evening, we arrived, cold and wet, at a small village, where we lodged in a warm room, about sifty verst from Tobolsky.

Next day, the river was fo covered with ice that we could proceed no farther in our boats; but luckily, in the night, there fell fnow enough for fledges. We foon got horses, and such open sledges as the place afforded, and, in the evening, arrived fafe at the city of Tobolsky. We went immediately to the palace of Prince Alexie Michaylovitz Cherkasky, the governour, who was an intimate friend of the ambafsador. This prince was much esteemed for his capacity, as well as his great probity and honour. We supped with him, and then retired to our lodgings; but could not avoid commiserating the fate of our fellow travellers, labouring with the ice, and afraid of being frozen up every minute.

The 3d, we sent some soldiers to meet the barks, and assist them in coming up the river. And on the 5th, they arrived safe at Tobolsky, where they were next day discharged.

We were obliged to stay here for the salling of the snow, in order to proceed on sledges, the common method of travelling in winter. At this place we thought ourselves at home, having good lodgings, good company, and plenty of provisions, so that we waited patiently for the setting in of winter; besides, we had now a frequented road, lying through a well inhabited country, all the way to Mosco.

During our stay at Tobolsky, I was informed, that a large troop of gipsies had been lately at that place, to the number of sixty and upwards, consisting of men, women, and children. The Russians call these vagabonds tziggany. Their forry baggage was carried on horses and assess. The arrival of so many strangers being reported to Mr Petross Solovoy, the vice-governour,

governour, he fent for some of the chief of the gang, and demanded whither they were going? they answered him, to China; upon which he told them, he could not permit them to proceed any farther eastward, as they had no passport, and ordered them to return to the place whence they came. It seems these people had roamed, in small parties, during the summer season, cross the vast countries between Poland and this place, subsisting themselves on what they could find, and on felling trinkets, and telling fortunes to the country people. Tobolsky, being the place of rendezvous. was the end of their long journey eastward; and they, with no small regret, were obliged to turn their faces to the west again.

Before I leave this new world, as it may be called, of Siberia, I think it well deserves a few general remarks, besides the particulars mentioned in my journal.

This vast extent of eastern continent is bounded by Russia to the west, by Great Tartary

Tartary to the fouth, on the east and north by the respective oceans; its circumference is not easy to ascertain. Foreigners commonly are terrified at the very name of Siberia or Sibir, as it is sometimes called; but, from what I have said concerning it, I presume it will be granted, that it is by no means so bad as is generally imagined. On the contrary, the country is really excellent, and abounds with all things necesfary for the use of man and beast. There is no want of any thing, but people to cultivate a fruitful foil, well watered by many of the noblest rivers in the world, and these stored with variety of such fine fishes, as are seldom found in other countries. As to fine woods, furnished with all forts of game and wild fowl, no country can exceed ît.

Siberia is generally plain, sometimes varied with rising grounds, but contains no high mountains, and few hills, except towards the borders of China, where you find many pleasant hills and fruitful valleys.

Considering the extent of this country, and the many advantages it possesses, I cannot help being of opinion, that it is sufficient to contain all the nations in Europe, where they might enjoy a more comfortable life than many of them do at present. For my part, I think, that, had a person his liberty and a few friends, there are few places where he could spend life more agreeably than in some parts of Siberia.

Towards the north, indeed, the winter is long, and extremely cold. There are also many dreary wastes, and deep woods, terminated only by great rivers, or the ocean; but these I would leave to the present inhabitants, the honest Osteaks and Tonguses, and others like them, where, free from ambition and avarice, they spend their lives in peace and tranquillity. I am even perfuaded, that these poor people would not change their fituation and manner of life, for the finest climate, and all the riches of the east; for I have often heard them say, that God, who had placed them in this country,

country, knew what was best for them, and they were satisfied with their lot.

During our stay at Tobolsky, a messenger arrived from court, with the glad tidings of peace being concluded between his Czarish Majesty and the crown of Sweden, after a destructive war, which had raged above twenty years. This was very agreeable news to every body, particularly to the officers who had remained so long in captivity. The peace was proclaimed with string of guns, and other rejoicings usual on such occasions.

November 18th, all the roads being now firm, and fit for fledges, we left Tobolfky in a strong frost. As we returned by the same road we went to the eastward, which I have already described, I shall not repeat the particulars, but only name the towns through which we passed, viz. Tumeen, Epantshin, Verchaturia, and Solikamsky. The weather being excessively cold, we remained two days at this place. From thence we came to Kay-gorod, then to Vol. II, Dd Klinoss;

M.CO.

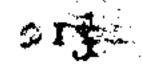

Klinoff; from which, instead of going towards Cazan, we proceeded straight through the woods towards the town of Nishna-Novogorod, situated at the conflux of the Wolga and Ocka. This road is nearest, but very rough and narrow in many places, the country being overgrown with large tall woods, of different kinds, according to the nature of the soil. The principal inhabitants are the Tzeremish, who afford but indifferent accommodation for travellers; however, the people are very courteous and hospitable. Among them are scattered a few Russ villages, and a very few Russ towns of small note; for which reafon, I shall only mention the names of such as lay in our road from Klinoff to Kusma-Damiansko, (which last place is situated on the east bank of the river Volga), viz. Bistritsky, a large village; Orloss, a small town; Yuriefsky, a village; Kotelnitzy, a finall town; a village called Tzorno-Retzky; a large village called Voskresensky; Yaransky, a small town; Tzarevo-Sanchurfky,

chursky, another small town; Shumetrey, a village. Besides these, and some others, we passed through many villages, inhabited by Tzeremishian and Tzoowashian Tartars, to mention which would be too tedious. These people, having destroyed the woods about their villages, live much at their ease, have plenty of corn and cattle; and great numbers of bee-hives, whereby they furnish the markets with great quantities of honey and bees-wax. They also furnished us with changes of horses whenever we had occasion for them; but their tackling of harness, &c. is so bad, that much time was lost in accommodating them to our heavy carriages, so that we thought ourselves happy when we met with Russian villages, which are far better provided in that respect, and more accustomed to travelling than those poor people, who never go far from their own home.

After a tedious journey, we came out of the woods to the Volga, and travelled along upon the ice, which, in some places,

was not very firm. In the evening we reached Nishna-Novogorod, where we staid fome days to refresh ourselves, and kept our Christmas with the commandant.

We proceeded again on the 28th, and little material happening, arrived fafe at the capital city of Mosco, on the 5th day of January 1722, where we found his Czarish Majesty, and all the court, who had lately arrived from St Petersburgh, and preparations were making for grand sire-works, triumphal arches, and other marks of joy, on account of the peace: With which I shall conclude my journal.

THINK it will not be unacceptable to the reader, if I subjoin a list of the places and distances between St Petersburgh and Pekin. They are as follows.

It is to be noted, that the distances between St Petersburgh and Tobolsky, in
Siberia, are all measured versts, each verst
being 500 Russ fathoms, each fathom
consisting of seven feet English measure;
so that a Russian verst measures exactly
1166 \(\frac{2}{3}\) yards.

TRANSLATION

OFTHE

EDITOR'S PREFACE

TO THE

R E A D E R.

HIS Journal is a very curious, and an authentic piece, and certainly merits the attention of the public, as well for its use, as the novelty of the subject it treats of.

As the world is not so sufficiently informed of what passes in those distant countries, as to form a tolerable judgment of what the court of Russia may have to do with that of China, I am now about to give a succinct relation

relation thereof to the reader, that it may ferve him as an introduction to the work.

It is now well known that the frontiers of Siberia are contiguous to those of China; for this reason, it is natural to think that the court of Russia should have more frequent correspondence with that of China than any other court of Europe. Nevertheless, this correspondence between the two courts is of no ancient date, as it did not commence but fince the Mongall Tartars made themselves masters of China, about the year 1040; for it was about that time that the Pussians, after being possessed of Siberia from the latter end of the fixteenth century, began to spread themselves over that vast country, not having met the least resistance from the ancient inhabitants of those parts; till, at last, they came to establish themselves about the lake Baykall, and the river Amoor, thereby becoming near neighbours to the Mongall Tartars; by intercourse with them the Russians soon came to understand that their nation had possessed

possessed themselves of China; and that it was the Prince who was actually their Chan who fifted at that time the throne of China.

The court of Russia was not ignorant of the extreme opulence of the empire of China; and, apprifed that the distance from Siberia could not be great, resolved to try if they could not draw some advantages from that discovery, by establishing a regular commerce between Siberia and China; promifing themselves no less, than to draw into Russia, from that empire, a great part of its riches. For this purpose, the court of Russia sent, successively, several ambassadors, or envoys, to China; who succeeded fo well, that the Chinese, at length, consented to the entry of the caravans into their dominions, from Siberia, on conditions very advantageous to Russia.

During these transactions, the Russians daily gained ground on the frontiers of the Mongall Tartars; and even made no fcruple, when they thought fit, of establishing themselves on their territories, with a Vol. II. Ff

defign

design to approach on one side, along the river Amoor, towards the Oriental Sea; and, on the other fide, along the river Selinga, towards the frontiers of China.

In the mean time, the new government of China was not long of comprehending that all these new settlements, which the Russians made upon the frontiers of the Mongalls, would in time render their power too formidable to the subjects of China; and might come at last to be very dangerous to the repose of China itself, in case any misunderstandings between the two nations should arise. On these confiderations, they resolved to oppose settlement to fettlement, and to build fome towns and villages on the frontiers of the Mongall Tartars, at some distance from the last fettlements of the Russians; in order thereby to prevent their penetrating further into the country, to the prejudice of the Tartar subjects of China.

In consequence of this resolution, the Chinese built, about the year 1670, the rough of Xixigan, with several other boroughs and villages thereabouts; which they peopled with colonies of Mongalls, subjects of China.

Thence arose disputes between the two empires, on the subject of their frontiers. And, in place of the negotiations being confined to affairs of commerce, and mutual protestations of amity and friendship, on one fide and the other, the grand object of all their aims came now to be the accommodation of the affair of the frontiers, and the regulation of limits between the two empires. But, in as much as one would preserve to themselves the right of doing as they thought fit, and the other would, at all hazards, keep them from doing what they thought dangerous, there arose a great coolness between them; which came to blows in the years 1684 and 1685. It is true, that they laboured incessantly, both on the one side and the other, for a re-establishment of good har-

mony between the two nations; to this end there were held two different congresses, at the town of Nerchinsky, between the plenipotentiaries of Russia and those, of China. But those gentlemen met with fo many difficulties, in reconciling their different sentiments and interests, that they were obliged to separate without success. At last, F. Gerbillon, a Jesuit, returned again to the town of Nerchinsky, in quality of plenipotentiary of the court of China, and there, in 1689, figned a treaty of peace, and perpetual alliance, between the two empires; which was afterwards ratified, in the usual forms, by both the courts.

That treaty was not very advantageous to the Russians, because it set bounds to their establishments on these frontiers, which was a very disagreeable article. And, as they believed the Chinese would not regard it very strictly, provided they did not advance further on the side of the Selinga, and the towns they had lately built to the southward of the frontiers, the Russians

again

again began to make new settlements along the river Amoor; and, at last, to build along the fouth bank of that river, thirty leagues beyond their limits, a town they called Albazin; in hopes that the Chinese could not be without Siberian form and would rather choose to wink at these enterprises, than enter into a new war. But they were quite mistaken in their calculation; for the Mongalls furnished such quantities of furs to China, from the time they had orders from the Chan to spread themselves along the banks of the Amoor. that the Chinese began to perceive that they could be sufficiently supplied with furs, without those from Siberia. And in these sentiments they spoke freely their thoughts of these new enterprises of the Russians.

In the mean time, the Russians gave them good words and fair promises, but continued to carry on their point, slattering themselves that they might find some favourable opportunity of pacifying them.

Never-

Nevertheless, the Chinese growing doubtful of the Russians complying with their demands, which they thought well founded, at length they had recourse to force; and, in the year 1715, made the Mongalls fubjects to China, take arms, and laid fiege to the town of Albazin, the place which was the principal ground of their complaints. This siege continued three years; and, as the late Peter the Great was occupied in his grand designs to the westward, he would not continue the quarrel with China. Thus they let the town fall into the hands of the Mongalls, and agreed to a new provisional treaty with the court of But, as other differences on the frontiers still subsisted, the court of Russia sent again, in 1719, an envoy extraordinary to Pekin, to regulate entirely what remained to be adjusted between the two empires; and seeing that, by means of these differences, the commerce of the caravans was much lessened, the true object of his · negotiation was to re-establish that commerce; and, to that end, to try to induce the court of China to consent to the residence of an agent from Russia, at the court of Pekin, who might take care to watch over the affairs of the caravan, and so preserve a good understanding between the two empires. The envoy of Russia, having happily executed the last part of his commission, lest, at his departure from Pekin, Mr de Lange, as agent of Russia at the court of Pekin, who was the author of the following Journal.

The public is obliged for this tract to a foreign minister, who resided many years at the court of Russia, and who permitted it to be communicated to the public. But, to make the reading of it more agreeable, and more useful to the world, it was thought sit to add some little remarks in the places which required elucidation, that nothing might be wanting to the reader on so interesting a subject.

		•

JOURNAL

O F

MR DE LANGE, &c.

March 1721.

R DE ISMAYLOFF, ambassador and envoy extraordinary of his Czarish Majesty, having fixed his departure from Pekin to be on the 2d of March, after having finished his negotiations at the court of China in the best manner he possibly could *, I took the resolution of ac-Vol. II. G g companying

Mr De Ismayloff, a gentleman of great merit, and a Captain in the regiment of the Preobraschinsky guards, was sent, in the year 1719, by the late Empe-

red

but the gentlemen of the ministry thought proper to refuse me a passport; pretending that, as I was ordered by his Czarish Majesty to reside at the court of the Chan *, it was necessary that I should have permission of the Bogdoi-Chan himself, not only for going as far as the grand wall, but also for every time that I would go to stay a night without the walls of Pekin; to the intent that the court might always be assu-

ror Peter the Great, to China, with the character of ambassador and envoy extraordinary, to renew the treaties between Russia and China, and to endeavour to bring the court of Pekin to agree to a regulated free commerce with Russia.

* All the Tartars give to their reigning princes the title of Chan; and, as the house which at present fills the throne of China is come from that branch of Pagan Tartars known to us by the name of Oriental Mongalls, the Emperors of China conform themselves to the established custom of their nation, preserving, to this time, the title of Chan. Vide Hist. Genealog. des Tartares.

red that no ill accident should happen to me, being a foreigner *. And, as the Bog-doi-Chan had already quitted his residence of Pekin, to take the diversion of hunting, it was not without a good deal of trouble that I obtained permission to accompany Mr De Ismayloss as far as Ezampinia, which is a town 60 ly † distant from Pekin, from whence I returned, being efforted by a clerk of the council for the affairs of the Mongalls, and some sol-diers;

^{*} Mr De Ismayloss, at his departure from Pekin, lest, by virtue of his instructions, Mr de Lange, in quality of agent of Russia, to treat of, and bring to a conclusion, a regulation of commerce, and the establishment of an easy correspondence between the two empires; and, although the Chinese ministry opposed most strenuously the residence of the said agent, at their court, on pretence that it was contrary to the sundamental constitutions of the empire; yet the said ambassador knew so well how to take his measures, that the Bogdoi-Chan gave his consent to it, notwithstanding all the intrigues of the ministry to the contrary.

[†] One ly of China is exactly 360 geometrical paces.

diers; and thus came back to Pekin on the 6th.

The 7th, early in the morning, I saw enter the court-yard of my house a man who had the appearance of a poor beggar; he brought with him some poor starved fowls, and falted cabbage, together with some pots of tarassun, which is a fermented liquor, made of grain, and what the Chinese drink instead of wine, making it warm before they drink it. This man, having set it all down in my court-yard, was returning, when I ordered him to be called back, to inform me of the meaning of his so doing. Upon which he told me, " That "it was part of the provisions he had " bought for me, by order of the college " who have the charge of the Emperor's " magazines of provisions; but that, not " being able to bring all at once, he was " going to fetch the rest." Whereupon, being informed by him what his occupation was, I understood, "That he had " made a contract with the said college to " furnish

"tain quantity of provisions for my house."
Upon which I ordered him to take every thing away that he said he had bought for me, and to bring no more to my house, till I should receive previous information, from the council for foreign affairs, how much I was daily to receive by order of the Bogdoi-Chan, and through whose hands I was to receive them.

Whereupon I sent to let the Mandarine (who were appointed to propose to the council what might regard me) know what had occurred with this man, who came, in the above manner, to bring me provisions on the part of the Bogdoi-Chan; and also that I should always most respectfully receive whatever the Bogdoi-Chan, from his friendship for his Czarish Majesty, should order for my subsistence, in case it was sent me in a proper manner; at the same time, defiring them to acquaint me with the particulars of what the court had ordered for my subsistence. Whereupon those gentlemen

tlemen sent me the following answer, That I should receive the same allow-"ance which I had received before, during " the relidence of the envoy extraordinary this court, and that they had already " made an agreement to deliver my allow-"ance regularly." I represented to them thereupon, "That I never had any sepa-"rate allowance during the residence of his Excellency the envoy at Pekin, having "had the honour of eating always at the " same table with him; that, for this rea-" fon, I could now receive nothing, until "I should know precisely wherein it was to consist; and that, after I should know " what the allowance was to be, I should " desire them to pay me the amount of "the same in money, which they were to " pay to the purveyor." These gentlemen were not wanting in letting me know, "That I ought not so nicely to examine "what the Bogdoi-Chan, without any " obligation, had ordered to be given me " out of his mere grace." But I affured them,

them, in strong terms, in my turn, "That absolutely would receive nothing on these terms; for I was very doubtful "whether the Bogdoi-Chan was informed, "that fuch a person was trusted with the "disposition of what allowince he was "pleased to order for me." This resolution much discomposed the gentlemen Mandarins, who had reckoned on supplying their own tables with my provisions; but, seeing how difficult it was to obtain their ends on this occasion, they at last delivered to me the following specification, and said it was what the Bogdoi-Chan had ordered for my allowance, viz. per day,

- I fish.
- I sheep. 🦥
- I pot of tarassun.
- I fowl.
- I bowl of milk.
- 2 oz. of tea.
- 2 oz. of butter.

- 2 oz. of lamp-oil.
 - igin salted cabbage.
 - 2 small measures of rice.
 - 15 gin of wood.

To my interpreter per day,

- I oz. of tea.
- ; gin of flour.
- 2 oz. of butter.
- 2 oz. of lamp-oil.
 - 2 small measures of rice.
 - 8 gin of wood.

And every 9 days a sheep.

To every one of my domestics per day,

- 1 gin of beef.
 - r oz. of falt.
 - 1 measure of rice.
 - 5 gin of wood.

To a dragoon who was left behind by the envoy at Pekin, upon account of some tapestries they were working for his Czarish Majesty,

- I measure of rice.
- 1 oz. of tea.
- 3 gin of flour.

oz. of butter.

2 oz. of lamp-oil.

5 gin of wood.

And every 9 days a sheep.

By laen you are to understand ounces, and by gin pounds.

Upon delivering this specification, the Mandarins acquainted me, "That, as they "were obliged to buy the fish, the fowls, "the sheep, and the milk, for my provifions, with ready money, I might receive the value of those things in money; but, "in regard to the other articles, I must "content myself to receive them in kind "from the Chan's magazines *."

Vol. II. Hh Upon

The Emperor of China receives the greatest part of the tribute of his subjects in the country in provisions and manufactures of the growth of the several provinces, which are afterwards distributed in kind to all persons in the service of this monarchy, and reckoned to them as part of their salary; so that all the gold and silver, that comes into the treasury of the Chan, arises from the tribute of the cities, the duties inwards and outwards, the tolls of passengers, the mines of gold and silver, and sines or confiscations; all which together amount every year to immense sums.

Dpon which I assured them, "I should make no objection, provided they did it " in a decent manner, and not by unknown "people that marched off as foon as they had thrown it down in my court-yard, "as they had once done." At the same time I demanded of them, "Whether I "could still have the Chan's horses, to " make use of them when I should have "occasion, as I had during the residence of "the envoy extraordinary." They and fwered me thereupon, "That I might cer-"tainly have the Chan's horses always; but then, as the stables of the Chan were "at a considerable distance, it was neces-" fary for me always to acquaint them of " my intentions, the day before I intended to ride out; upon such notice, they "would take care that the horses should " always be ready at my quarters very ear-" ly in the morning To avoid this inconvenience,

^{*} At Pekin, they always make visits in town on horseback. But the Princes of the blood, and the grand

convenience, and to avoid the being obliged to let them know every day where I would go, I took the resolution to buy six horses, and to keep them at my own expence, though forage was very dear at Pekin. The guard that had been placed upon the envoy's quarters, during the time of his stay at Pekin, under the command of a brigadier, remained still on the same footing after his departure, as did the two Mandarins of the 37th order *, together with a clerk, to receive from me whatever I should have to propose, whether by word of mouth

grand Mandarines, are generally carried in litters on these occasions, attended with a numerous train of domestics.

* Every man appointed to any public charge or dignity in China, from the highest to the lowest, is called by the name of Mandarin; whence it comes that there are many orders, which are all distinguished, one from the other, by difference of habits, characters, and sigures, which are embroidered or sewed on their habits; insomuch that, upon seeing a Mandarin, it may be immediately known of what order he is; because every Mandarin is forbid to appear in public without the habit of his order, under pain of the most rigorous penalties.

mouth or by writing, and to make their report to the council of foreign affairs; and this appeared to me a very good omen.

The 9th, the brigadier of the guard of my quarters let me know, that the Bogdoi-Chan would return from hunting the next day, and that if I was desirous to go to meet him, he would give orders, that the Mandarins should be ready to escort me with a guard of horse for the security of my person.

carly to go to meet the Chan. When his Majesty saw me, he called me to him, and asked me, "If I did not repine to be alone "in a foreign empire, so far from Eu"rope?" He further asked, "If I was "well, and if I was contented?" Upon which, having with a profound reverence thanked his Majesty for my gracious reception, I assured him, "That "I found myself perfectly well, and I "could not but be well content with ha-

"ving the honour of residing at the court
"of so grand a monarch." After which
his Majesty, having dismissed me, was carried in his litter to Pekin, sollowed by a
very numerous court *.

The 11th, 12th, and 13th, I notified to the Mandarins, solicitors in my affairs, "That, having several things to get made "for the Emperor, my master, I should "have

*The Emperor of China might be then in his 69th lunar year; but he was still very well disposed in body and mind, and was looked upon as a monarch of superior penetration and genius. The Fathers Jesuits, Missionaries in China, had great influence with him; and he usually consulted them on all affairs of importance. He mounted the throne anno 1662, aged eight years, and died in September 1722.

The Prince, his 3d son, who already commanded the armies of the empire, succeeded to the empire; for the deceased Emperor had confined his two eldest sons in a close prison, some years before his death, upon some alledged attempts to rebel, true or salse, and declared them excluded from succeeding to the empire. Nevertheless their brother set them at liberty, immediately upon his accession to the empire, and heaped salvours on them, to make them forget the loss of their right, which he possessed.

" have great occasion for the money which divers merchants of Pekin were owing to "the commissary Gusaitnikoss, who had " been lately at Pekin with the caravan of Siberia *; and I craved their assistance to facilitate the recovery of those sums, " feeing the debtors had engaged them-" selves, before the envoy extraordinary, "to pay me the same immediately after his "departure." The Mandarins explained themselves very favourably thereupon; but our debtors, having got notice of it, retired into the country, which obliged me to leave this affair to another opportunity.

The 15th, the Bogdoi-Chan went to Czchan-zchumnienne, which is a house of pleasure belonging to his Majesty, 12 ly westward of Pekin, where he frequently makes his residence. But having observed, in his passing, that the triumphal arches, and other like ornaments, which are raised

on

They give the title of Commissary to those who have the direction of the caravans, which come from · Siberia to Pekin to trade.

on His birth-day, on both fides of the grand road, paved with fquare flat stones, That reaches from Pekin to Czchan-zchumnienne, were not of the usual magnificence, all the ministry were disgraced for many weeks. Upon which the ministers, having instantly ordered the demolition of all that had been built, caused to be built up anew. from the palace of the Emperor at Pekin quite to Czchan-zchumnienne, a great number of triumphal arches, and of most magnificent columns, of an exquisite taste, all embellished with gildings, and festoons of all forts of rich filks, of most lively figures and colours. At the same time, in several places, they erected theatres of great beauty, where the most able comedians exerted their talents, in representing the most difficult and curious parts of their professions accompanied with the grandest concerts of music, both vocal and instrumental, diversified with the amusements of dancing, and feats of uncommon agility. All these entertainments being prepared,

the ministers went in a body to the imperial palace, supplicated the monarch on their knees, with their faces prostrate to the ground, that he would be pleased to admit them to his good graces, and that he would be pleased to send some, in whom he could confide, to examine their new structures *. But the Bogdoi-Chan ordered them to be told, "That he would see " nothing of what they had done, and that "he would never celebrate his birth-day " at Pekin more, for that he was as much "Emperor of China at Czchan-zchumni-" enne, as he should be though sitting on "the imperial throne at Pekin †."

The

The honours which they pay to the Emperors of China approach even to adoration; all those who have audience of him, being obliged to proftrate themselves three times before him, from which none are exempted, not even ambassadors, or other foreign ministers; Mr de Ismayloff, notwithstanding his quality, being obliged to go through that ceremony, as well as all others.

† The deceased Emperor of China held the great lords of China very cheap; for he very well knew, MR DE LANGE.

The 17th, I defired the Mandarins, solicitors for my affairs, to come to me upon business that regarded the council. Upon which they sent me word, that, one of them being ill, the other dared not to middle in matters that regarded the council, without the participation of his commade. This obliged me to wait the recovery of the sick Mandarin, and till I could see them both together.

The 18th, 19th, and 20th, I was willing to avail myself of the opportunity the sickness of one of my Mandarins gave me, to make some visits to merchants of my acquaintance, and to the Father Jesuits, hoping thereby to induce them to return my visits, and give me opportunity of Vol. II. I i knowing

that, in their hearts, they bore the Tartar yoke very impatiently. Nevertheless, since the very severe executions he ordered in the beginning of his reign, he seldom punished with death the great Chinese Mandarins, who sell into disgrace, contenting himself with condemning them to pay exorbitant pecuniary sines; which incapacitated them from doing any thing against his authority, whatever desire they might have so to

knowing something of the commerce of this empire. But I found that they all received my visit with very forced civilities, and great referve, particularly the merchants, who endeavoured to appear much occupied about other important affairs; so that, seeing it very difficult to bring them into my views, in the present conjuncture, I thought it best to postpone these sorts of visits to a more proper time. But they, not doubting that fuch a reception would occasion my making many reflections, let me know, by a third hand, "That my " visits should be always most agreeable to "them, and that they wished, with all "their hearts, to divert me every day bet-" ter than the custom of their country per-" mitted them; and likewise, on occasion, " to come and see me, were it not for fear " of the foldiers, who followed me every " where, which prevented them: For, in " case they should not place the soldiers in "the same chamber with themselves and " me, and entertain them with every thing

"culing them of having a clandestine commerce, of great importance, with me, or other suspicious negotiations, which would not fail of costing them consider- able sums of money, and possibly might prove their entire ruin *." It is true, the Fathers Jesuits could not alledge such

* The Princes of the house of the Tartars, who at present reign in China, have learned, at the expense of their predecessors, that they ought not to depend too much on the fidelity of the Chinese; for this reafon, all the military of the empire is, in a manner, composed of Mongali Tartars, who, on that account, enjoy confiderable privileges, which makes them very infolent and almost insupportable to the Chinese. And as the number of these Tartars were not deemed sufficient to curb the Chinese, considering the vast extent of the empire, the late Bogdoi-Chan found it necessary, in order to augment their number, to make a law, whereby all the Tartar Mongalls, men or women, who should marry with Chinese, were obliged to bring up their children according to the customs of the Mongalls, and to teach them the Mongalis language; and that, by means of this precaution, all those children should be deemed naturalized Mongalls, and enjoy the privilege of native Mongalls.

fears of the soldiers of my guard as the merchants; their belonging to the court put them on quite another footing than the ordinary rank of people were upon; but they pretended that, as they were foreigners, they were obliged to act with great caution, in order to prevent suspicion *. This did not surprise me at all, in regard to a nation, the genius of which I already had a tolerable knowledge of. The affairs I had to manage were of a very difficult nature, and in all countries the entering properly into such ought to be the principal care; but I, nevertheles, flattered myfelf, that this unpromising aspect, at my entering on my functions, would take a more favourable turn, as foon as the Bog-

This was but an excuse of the Jesuits, to prevent the visits of Mr de Lange, whose residing at Pekin could not be very agreeable to them, as it was to act in the affairs of a monarch who had turned all the Jefuits out of his empire, and would suffer no other Roman Catholic missionaries, but the Capuchins, to reside in his dominions.

doi-Chan should receive the credentials I had from the Emperor, my master.

The 22d, my Mandarins came together to see me, and to know what I had to propose to the council; upon which I requested them,

"I. To put the Allegamba, or prefident
"of the council for foreign affairs in mind,
"in my name, that they had let my credentials, from the Emperor my master,
"remain in my hands beyond the usual
"time; and that I waited, through his
hands, the order of the Bogdoi-Chan, to
appoint when he would please to receive
them.

"2. To acquaint the president, that I had resolved to hire a house for myself, inear the quarters of the Russians, against the arrival of the caravan, to the end that the said quarters might be repaired, which, from age, were gone to ruin, and might be entirely beat down by the approaching rainy season; that, unless this reparation be made, the commissary would

"would not know where to lodge on his arrival at Pekin, except he would run risk of having the merchandises dama"ged."

"3. To demand for me a passport, with the necessary escort, for some baggage, left at Pekin during the time of the amuse bassade, which I wanted to send out of hand to Selinginsky *." The said baggage was some raw silk which I had bought on account of Mr Nicolai Christizy, with cash and essects that he had left in my hands †.

The

* Selinginsky is the last fortress belonging to Russia, towards the north-west of China. This town is in the country of the Mongalls, upon the east side of the river Sclinga, 30 days journey from Pekin, in lat. 51. 30. The climate of Selinginsky is very mild, and the country about is very pleasant. The Mongall Tartars did not accustom themselves to the cultivation of ground; yet every thing that is sown or planted there thrives exceedingly.

† Through all Russia they use hardly any other silk but that of China, which is undoubtedly the best in the world; it being certain, that two pounds of Chinese silk will go as far in manufacturing as three pounds of

either Perfian or Italian filk.

1,701.

The answer, which I received immediately after from those gentlemen, contained in substance, "That the Emperor him-"felf having allotted that house for my "quarters, no person would readily in-"finuate to him that I was not satisfied " with it; and that, without a special li-" cense from him, no person in all Pekin, "were it even the imperial Prince himself, "would dare to let me a lodging, seeing it "would thereby look as if the Bogdoi-"Chan had not an inhabitable house for a "foreigner." To which I replied, "That " I made no doubt of so great a monarch's "having houses enough for lodging as "many foreigners as he pleased; but, "that I was well perfuaded, when the " Bogdoi-Chan should be informed of the " condition that house was in, he would " not oblige me to inhabit it longer. Be-"fides, that it was acting contrary to the "common right, allowed by all the world, " to restrain a person, in a public charac-"ter, from hiring a lodging, with his own money,

"money, which might be commodious for him, without a previous application to "the Emperor himself." They answered me thereupon, "That the usages in Europe were not practifed by them; and, " as all the countries in the world had their "particular customs, China had her's, " which would not be altered on any con-" fideration whatever." They also told me plainly, "That they could not write to the "council on this subject, for that they knew of a certainty, that no person durst " make the proposition to the Emperor." Upon which having told them, "That, "as the case was so, I must submit to re-" main there, till the impossibility of abid-"ing longer may force me to have re-

"course to other measures." They of themselves proposed to me, "That the "Chan might be petitioned to allot me o-

" ther quarters, without alledging that my

" present quarters were in so miserable a

"condition." But, seeing I did not pretend to go out, but because it was in such was impossible for them to make the proposal to his Majesty on that footing.

The 23d, the aforesaid Mandarins came again to me to acquaint me, "That the "president would consult the other members of the council upon my credential "letters, and would put the Emperor in remembrance, when occasion should offer. But, concerning the sending away the baggage, I must have patience till after the Emperor's birth-day, seeing the preparations for its celebration so fully employed every body, that nothing else was attended to, though of ever so great consequence."

April.

The 1st of this month, the Aloy, or master of the ceremonies of the Chan, invited me, by order of the Bogdoi-Chan, to come to Czchan-Zchumnienne. Upon which I went there instantly: I was no sooner arrived, but I sent to notify the Vol. II. Kk same

same to the said Aloy, and forthwith went to his apartment. I understood from him, that the Bogdoi-Ghan had an intention to have admitted me that day to an audience, but other affairs had unexpectedly intervened; he had ordered him to deliver to me a piece of the tapestry which they were at work upon for the Czar, in order that I might fend it to Russia by an express, and acquaint the Czar, that what pieces remained to be made should be ready in three months *. I laid hold of this opportunity of the passports and convoy necessary for the piece of tapeaty, to request of this gentleman, "That he would be so good as "to manage it to, as that, when his Ma-"jesty should give order for the passport "and convoy for the piece of tapestry, I "should, at the same time, be furnished " with

^{*} The tapestry of China is generally made of satin, embroidered with large figures of gold and filk, the colours very bright, but the designs not correct; they are not adjusted to surnishing of rooms, unless bespoke on purpose, or composed of many different pieces.

with passports for the baggage abovementioned which I had to forward, and "that he would please to be at the trouble " of informing himself, when his Majesty " would be pleased to receive my letters of "credence from the Czar with which I was charged." Wherenpon the Aloy desired me to remain at his lodgings, whilst he went to make the proposal to the Emperor; and, at his return, he acquainted me, "That his Majesty would, out of "hand, give orders to the council, that "they should furnish me with the pass-"ports and convoy necessary, as well for "the tapestry as the baggage. I wanted to " send; but that it could not be till after "the birth-day." That, as to the letters of credence, he did not find it proper to mention it to the Emperor, it appearing to him that his Majesty frequently thought of me, and would not forget my letters of credence *, and gave me, in some measure,

* The late Emperor of China, notwithstanding his great age, had so extraordinary a memory, till a little

an

defer the receiving it. And then he made his excuses that he could not longer wait on me, being obliged instantly to return to the court.

The 2d, according to custom, the birthday of his Majesty should have been celebrated, with the utmost magnisseence, at Czchan-Zchumnienne; but, inasmuch as his

time before his death, that a Flemish Jesuit, who is yet at Pekin, recounted to one in the retinue of Mr de Ismay loff, that, above 20 years ago, this monarch having shown him a wood pecker, asked him if there were such birds in their country; and, having answered yes, he asked its name in Flemish. That, some time after the arrival of Mr de Ismayloff, the Emperor, having cast his eye on such a bird, asked him then also, if such birds were in their country; and now answering, No, the Emperor asked him why he did not tell him the truth; and if he did not tremember, that, at such a time, he told him there were fuch birds in their country; upon which the father Jesuit declared, that he had been so long out of his own country, that he really did not know whether there was or not. The Emperor was very merry upon the Jesuit's having forgot his mother-tongue; and told him the bird's name in Flemish.

his Majesty was still displeased with his ministers, he only received the ordinary compliments on that occasion, without any other ceremony; after which every body retired to their own houses. I had, among others, the honour of paying my compliments to his Majesty on that occasion. That which appeared to me most worthy of observation at that time was 3000 old men, the youngest of which was above 60 years old, which, by express order of the Emperor, had been brought to Pekin from all the provinces of the empire. They were all dressed in yellow, which is the colour of the imperial liveries, and marched in parade to Czchan-Zchumnienne, where they ranged themselves in the court of the castle, and had the honour of making their compliments to the Emperor; after which his Majesty distributed to every one, without distinction, four laen of silver, and fent them home.

The same day, the parson of the church of St Nicolas, at Pekin*, presented me with a memorial of some debts which he had owing him, by diverse persons of that eity, on account of the deceased Archimandrite, praying my assistance in the affair.

The 3d, having received from the council the necessary passport for the courier I was to despatch with the piece of tapestry,

I

* Those of the Greek religion have but one church at Pekin, but the Roman Catholics have three churches very magnificently built, where there refort, on Sundays and holidays, a number of people of all conditions, the Roman Catholic religion being tolerated there; but it is remarkable, that the men do not uncover their heads during divine fervice, because it is a mark of infamy among them to have the head uncowered; no women appear there, having a separate a. partment in the churches. The late Emperor favoured the worship of the Romish church to such a degree, that he ordered that all the fons of Mandarins, who made their studies under the direction of the Jesuits, should be obliged to go, all Sundays and holidays, to their churches, which gave great uneafiness to the Chinese Bonzes.

L'acfpatched him, the same day, under the escort of a Chinese courier.

The 8th, some unknown people having entered my house, told me, by my interpreter, "That they had bought for me a "certain number of theep; but, if I would. not receive them in kind, they were rea-"dy to pay me half a laen of filver for "every sheep." I returned them in the same manner I did the former, letting them know, "That some person of the " college, which had the direction of the "Emperor's magazines of provisions, must "come to me to show me those who were "to bring me provisions." They attempted still, on several occasions, to bring in wood and other provisions in the same way to my house, without my being able to know who they were, or who fent them.

The 11th, I received the passport for the baggage of Mr Nicolai Christizy, which I despatched two days after from Pekin, under the escort of a Chinese courier. The president

president of the council letting me know, at the same time, "That I ought not to " fend many of those expeditions, as long "as the new treaty of commerce between "the two empires was unratified in the " accustomed forms; seeing it was not un-"derstood that they consented to a conti-" nual passage by small caravans, which I "myself sufficiently knew the reasons for, "having affifted at all the conferences held " on that subject."

The 13th, I learned that the Bogdoi-Chan was about to fet out instantly for Iegcholl, which is a town newly built, with a magnificent castle, without the great wall 440 ly, or two days by post, eastward of Pekin, where he usually passes the fine seafon of the summer in hunting, and other country diversions.

The 14th, I mounted on horseback to go to the President of the council, being arrived at the gate, the guard made me wait till they had acquainted him of my being there; immediately after which he

sent one of his servants to inform himself, "Whether I came purely on a visit, or ' had occasion to speak to him about busi-" ness; and that, in case I came about bu-" siness, that I should communicate the " fame to his servant, that he might in-" form his master of the subject of it." I made my compliments to the president by the messenger, and told him, " That I came " to pay a visit to his master; but, as to " the business I came about, that concern-" ed the master, not the servant." After which, the same servant returning, told me, "That I would be welcome to his " master *." Whereupon, entering into the court-yard, the president came out of his apartment to receive me, and having taken me by the hand, after some reciprocal compliments, he led me into an VOL. II. open

^{*} In China, when they go to see a mandarin, of what order soever, upon business regarding his office, the mandarin is obliged to put on the habit peculiar to his order; upon failure whereof he is amerced in large sines.

" con-

open saloon, where we sat down together, and were served with tea and milk according to the Chinele manner. After some time, I defired that he would put the Bogdoi-Chan in remembrance that I had letters to present to him from the Czar, my master, and that I should be very glad to know if he would be pleased to receive them before his departure. He answered me thereupon as the master of ceremonies had done before, "That his Majesty was well "informed of it, and would know himself "when he would have timento receive " them, without being put in mind of it; " and that, if we should put his Majesty " in remembrance of it, that would look " as if he or I wanted to prescribe the time "of doing it to his Majesty." I sought, by all ways possible, to engage him one way or other in this affair, but all in vain; and I was obliged to hold this for an anfwer; after which he added, "That, if his " Majesty had resolved not to receive my "letter of credence, he would not have

"consented to my residing at his court in quality of agent; and that Mr De If-" mayloff having fufficiently explained the " reasons of my stay in Pekin, these letters " could contain nothing very pressing." Upon which I replied to him, "That, in "Europe, the monarchs were not accus-"tomed, when the Czar wrote letters to " them, to let such a length of time pass " without receiving them; nor take it a-" mils, from their ministers, if they put " them in mind of such important affairs; " that I never expected fuch an answer in " China; but yet, as it was what I could " not remedy, I must bear it patiently, till " fuch time as his Majesty was disposed a " to receive them."

The 16th, I mounted again on horse-back to go to see the Alegada, or sirst minister, in hopes of getting a resolution more favourable to my affair than I got from the president of the council. Being arrived at his house, I was indeed admitted to come into his court-yard; but, as I had no desire

obliged to remain in the court till they notified to him my being there. He, like the other, sent a servant to me, to inform himself of the reason of my coming. To whom I signified, that I wanted the honour of seeing him, and of acquainting him with an affair which I did not think proper to explain to a servant. The same servant returned very soon to me, saying, "My master thanks you, Sir, for the trouble you have given yourself; he is very welf, but it a not consecutor for him to

The 17th, I was again in his neighbour-hood; and having sent my interpreter to him, to ask permission to see him for a moment, he sent me word, that it was impossible, because he was that instant going to his Majesty, and that he did not know when he should have time to speak with me. Whereupon, seeing this was an affair that could not be forced, I resolved to let it lie dormant for some time.

The 19th, I went to see a German Father Jesuit, who, being an old acqaintance, and a friend of mine from my first journey to China, made no scruple of telling me, that many of the principal mandarins of China much disapproved of the Chan's confenting to my remaining attreetin ... But that, as there was no person in all the empire that was bold enough to dare contradict the will of the Emperor, unless they would expose themselves to very great danger, it was very probable they would, by degrees, accustom themselves to my being there †. He said to me also, that he bad

^{*}The Chinese regard their ancient laws and customs as facred and inviolable; and it is not to be wondered at that they with great reluctance suffer the residence of a Russian agent at Pekin; as it is directly contrary to the fundamental constitutions of the empire, which absolutely forbid the Chinese to go out of the empire, and the admission of foreigners to an abode in it.

[†] The frequent executions which the late Emperor of China was obliged to cause to be made, in the early

had frequently sent his servant to me with his compliments, but that the guard at my door had as often turned him back, as a person who had no business at my house. Nevertheless, he did not think they would have been so untractable, if he would have given them a piece of money. He most strongly enjoined to take no notice of what he told me; for he would by no means appear in this affair; it was sufficient that I was informed by him, in order to take my measures thereupon when occasion offered.

There are at Pekin a great number of fmall merchants, or rather pedlars, who, as foon

part of his reign, in order to keep the Chinese quiet, occasioned such a dread in all the Chinese, that the greatest Lords of the empire could not approach his person without sear and trembling. Nevertheless, this monarch was far from being a tyrant in reality, for he was a true lover of justice, and spared the blood of his subjects as much as possible. He had forbid, under the most severe penalties, the putting a criminal to death, for what crime soever, unless he should confirm and sign the sentence of death with his own hand.

foon as they hear of any foreigners being arrived from Russia, or other parts, bring to their quarters all sorts of merchandise, which they get partly from the brokers, and partly from other houses, of different forts of people, who may have any goods which they would be willing to dispose of and it is often better to deal with thefe nedlars, for all forts of curiofities, and for made filks, than with the shop-keepers: for which reason, I bid some of these people bring to my house, from time to time, what they should light upon most curious in its kind, whether in rich silks, or jewels, or other goods of value, to the end that I might acquire a competent knowledge of all the forts of merchandise to be got in this city. Upon which they represented to me, that I might well believe that they fought nothing more than to gain a little money, it being their trade; and, of consequence, they would not fail of doing as I desired them, if my house was occupied by different persons; because what goods

were not liked by one, might find a buyer in another, and fo they might probably always fell fomething; but, as I alone occupied the house, and had such a numerous guard at the gate, they did not know how to do it; because, before they were permitted to enter my house, they were obliged to agree with the soldiers of the guard, how much they were to pay them on their going out; and, whether they sold any thing or not, they were equally obliged to pay the money they agreed to for the permission of entry.

The 20th, I fent to demand of the mandarins who had the care of my affairs, "If "it was with their knowledge that the fol-"diers of the guard that were at my gate did not permit any perfon to enter my house without their giving them money?" They, in answer, let me know, "That they knew nothing of the matter; but they would not fail to make inquiry; and, if they found that the foldiers, through ignorance, had done such a "thing,

273

thing, they would put things in better order for the future." And I found that they had spoke to the officers of the guard, who told them, "They had strict " orders to guard this house, and take par-"ticular care that the common people, " who are generally very infolent, should " not find means of coming into the court-" yard to steal any thing; and, as they were to be answerable, they were obliged to use the precautions necessary to " to this effect." They came to report this to me, as an unanswerable argument. But I assured them, that, whenever the guard admitted people to enter my house during the day-time, I would not make them answerable for any robbery that might happen at my house, for that I had a sufficient number of my own servants to drive out of my court-yard any persons who should dare to come there without having business.

It must be observed, on this occasion, that the Chinese have the custom of ex-Vol. II. Mm plaining

plaining themselves but once on one proposal; and, having once given an answer upon a matter, whatfoever it be, they always hold themselves upon this answer, as an infallible argument; so that, if you turn an affair into twenty different lights, to convince them, by one means or other, of their error, or to make them alter their sentiments, it is all lost trouble, they firmly holding by their first word. And it is a general rule with the Chinese, high and low, in all they have to do with foreigners; in so much that; every time a proposal is made to them, which their interest or vanity may incline them not to approve, it may be certainly depended upon, that, after infinite disputes, you will be obliged to receive the first words, which they pronounced in the beginning, for an answer, be it agreeable or disagreeable.

The 21st, I spoke with the brigadier of my guard about this affair, who is a person generally escemed by all the people of merit in the empire; some years past, he had filled

filled the greatest posts of the state, but was disgraced, and made brigadier, on account of the bad conduct of his brother. I can truly say, this is the most worthy man I have known in China, full of honour, reaion and probity; and the Pathers Jesuits agreed with me, that there was not his equal in all this great empire. He disapproved very much the conduct of the officers and foldiers of my guard; but he represented to me, at the same time, "That, having pre-" cise orders from the Emperor, that all forts " of the lower people should be prevent-" ed from entering or leaving my house at "their pleasure, to the end that no insult " might be' offered me, he could not avoid " giving the same orders to the officers of "my guard; but, to prevent the abuse of "his orders for time to come, he would "come regularly twice a week to my "quarters, to have an eye on their beha-"viour." Which gave me opportunities of making a particular friendship-with him; but neither mine, nor all the threats which

the brigadier gave to the officers and foldiers on this head, nor the rigorous treatment he made them feel on several occasions, could get the better of the insatiable avarice of these military people, who look upon it as their right to exact contributions of those who trade with foreigners. In short, it would have become insupportable to me, to be at the mercy of the chicanes that this pretended guard of honour studied to vex me with every day, if I had not had the hope that my credential letters would be very loon received; and that I should then be able to do my affairs with more satisfaction. .

The 23d, my interpreter having met one of our debtors, he put him in mind of the promises he had made to Mr De Ismayloff, and assured him, that, if he deferred satisfying me, he should be arrested, seeing this affair would not allow of more prolongation. Upon which, he promised to come to me, in two or three days, with his

of

comrades, and to endeavour, to the utmost of his power, not to come empty handed.

The 26th, two of these debtors came to my house with a Chinese merchant, who was their security; they told me, that one of their partners, named Dzchundzchan, who was indebted to us in 1400 laen of fine silver, died the year before. But, as I was apprifed that three of them were firmly bound in such case, one for the other, which they could not themselves gainsay, this sum must be brought to the account of the survivors. Of these two debtors which came to my house, the one named Dzchinborche was still in arrear 700 laen, according to what my interpreter said, but he acknowledged no more than 650 laen; the other, called Dzchin-sanga, was to deliver 340 thun of kitaika * on the arrival of the next caravan at Pekin, and this by virtue

^{*} A fort of glazed cotton, calendered and smoothed, which they make in China, of all forts of colours, whereof they sell great quantities through all the northern Asia.

of an obligation which he had given to the commissary Gusaitnicost, payable to him, or order. I told them, " That, though I "had not in my hands the obligation he " had given to Mr Gusaitnicoff, that need " not ninder their paying the debt to me, "if not all at once, at least by little and "and little, according as their abilities "would enable them, seeing this money was to come into the treasury of his Cza-"rish Majesty, and that, as soon as they paid the whole, I would give them an " obligation of indemnity, which would " make their obligations to Gusaitnikoff of "no value *." Upon which they replied, That

The commerce between Russia and China is at present a monopoly belonging to the treasury of Siberia, no other subjects of Russia being to concern themfelves in it, on pain of death, unless employed on account of the crown, tho' it is often evaded, by connivance of the Weywodes on the frontier places. By virtue of the last treaty, they can send no more than one caravan a-year from Siberia to Pekin, which doth not confift of more than 200 persons; instead of 1000 and more, which they amounted to heretofore, and which were

May.

The 1st, I delivered to my mandarins two memorials on the subject of those debts, and the debts of the parson of St Nicholas, desiring they would present them to the council, and communicate to me the answer which they should receive on them. The same day my mandarins put into my hands

subsisted at the charge of the Chan of China, whilst they were on the territories of China; but now they are to subsist upon their own charges.

hands 83 laen and 26 fun of fine silver; saying, That his Majesty had ordered this firm to be paid me for the value of the sheep, fowle, and milk, for two months past; and, for the time to come, every nine days, a clerk from the imperial treasury would bring me 12 laen, and 37 fun, in payment for the said provisions; and that the other allowances, which I was to receive in kind, should be likewise sent me by a clerk of the magazines from whence they were taken." So that all I should receive for my monthly allowance, in money and provisions, would amount, according to the current prices, to 48 laen; but they allowed no forage for my horses, which is a considerable article at Pekin, where forage is extremely dear. After which, during the rest of this day, the weather was very bad, a great deal of rain, with mighty gusts of wind; the old house where I was lodged could no longer stand the bad weather; all the wall of one fide of my chamber fell, about midnight, into the

the court-yard, which made me very apprehensive for what remained. I was obliged to retire into an adjoining chamber, to avoid, in some measure, the danger to which I found myself exposed. As this chamber, though a forry place, was very low, I found myself in less danger; besides, it was not quite so old and infirm as the other.

The next day, the 2d of this month, I advertised my mandarins of what had happened, praying them to cause immediate reparation to be made, if not of the whole house, of that apartment where I lodged at least. Whereupon they sent to assure me it should be done without loss of time.

But, on the 4th, they changed their note, and let me know that they could do nothing in it before the departure of the Emperor, feeing the college, which had the care of the buildings, were so much employed about the court, that they could give no attention to other affairs for the present. Whereupon I offered to repair it VOL. II. Nn

by people I would hire on my own expences. But they wanted to impose upon me in the price. And the mandarins protested to me, that it was an affair that might be their utter ruin, if the Emperor should come to know that they had consented to my repairing with my money a house that belonged to him; but they assured me they should set to work upon it very soon.

Jegchol; and, having the honour to attend him, on this occasion, to 15 ly from Pekin, his Majesty asked me, "If I expected the caravan soon?" I answered thereupon, "That I had not received any advices from the commissary, but nevertheless I computed that the caravan might be at Pekin in two months from that time." Whereupon he asked, me, "If I would not come and pass the time with the court at Jegcholl?" I received such a gracious invitation with all due submission, promising to come to pay my devoirs to his Majesty at Jegcholl as soon

as possible *. But, on my returning to Pekin, the governour of the city let me know, "That I could not follow the Emperor before his Majesty had sent the necessary orders to him and the council to give me post-horses, and the escort of mandarins, which I should have occasion for in this journey." In the mean time, I made feveral agreements, with divers persons, for different forts of japanned ware, which his Czarish Majesty wanted to have, which I could not get at the usual price, because those who supplied me with them were obliged to give a great part of what they gained on them every day to the foldiers' of my guard, for the liberty of entering my house.

The

^{*} The late Emperor of China was extremely affable and gracious towards Europeans, more especially to those who excelled in any science. He was taller than usual for people of his country, and not to be known, either by his complexion or seature, to be of Tartar extraction; it was only to be observed, that his cheek-bones, under his eyes, were a little rising and prominent, like the Mongalls.

The 10th, my mandarins being come to see me, one of them took leave of me; being, as he told me, named by the court to go, in quality of envoy, to the Delay-Lama *, and the other gave me positive asfurances, that, early the next morning, the workmen should begin to repair my quarters, and that they had already provided the materials necessary for that purpose. In regard to my two memorials, concerning the debts above mentioned, he gave me for answer, "That the president would not receive them, not finding it proper to meddle with fuch trifling things, as he had before hand told Mr De Ismayloff himself, that the council would absolutely not embarrafs

^{*} The Delay-Lama is the fovereign pontiff of the Kalmucks, Mongalls, and many other idolatrous nations north of the Indies. He is adored as a god by all these people, and by them believed to be immortal. He lives in a convent near the city of Potala, in the kingdom of Tangute, upon an high mountain, south of the deserts of Xame, towards the frontiers of Chiaz. Vide Hist. Genealog. des Tartares.

barrass themselves with any affair of debts; that nevertheless he had ordered his mandarin to press he, debtors to discharge their debts, in case they were in a condition of paying such sums."

The 20th, my mandarin coming, stopped at my gate, and having learned that my apartment remained still in the same condition, he sent one of his servants to make his excuses to me, for not coming to fee me; alledging, that the great heat approaching at noon would, he feared, incommode him. But I caused him to be told, for my whole answer, "That I did not understand such a compliment, and that I wished, with all my heart, that, in time to come, he would dispense with coming to my house at all." Upon this answer, he thought sit to come himself to me, and to complain much of the negligence of the college, which had the care of the buildings, in not adverting to the repair of my house, notwithstanding he had wrote to them several times on the subject, in the

most pressing terms. I demanded of him, "What he believed the Czar, my master, would think of fuch usage as he showed me; and, if he was not afraid, that in time he might be made responsible for such treatment." But he, laughing, told me, "That there passed many other things with them, and of more importance than this was, without daring to carry complaints to the Chan, and he did not doubt but that it was the fame at our court." Nevertheless, the brigadier of my guard, on being informed of the affair, went to the Mandarins of that college, and threatened them with his going himself to acquaint the Emperor, that, by their negligence, they contributed to the diminution of his glory in foreign countries, if they did not, without further delay, cause my house to be repaired the very next day.

The 25th, at length there came workmen to put my apartment into an habitable state. The same day one of our debtors, named Dzchin-Sanga, brought me 50

thun

thun of kitaika; but I saw no appearance of getting any thing from the others, they being very poor and indigent; and I perceived that the proceedings of our mandarin with them, tended more to get some little presents from them to himself, from time to time; than seriously to press them to the discharge of our debt.

In the months of June, July, and a part of August, there passed nothing material regarding me, either at the court, or with the ministry; all those of any distinction being going to partake of country diverfions. Wherefore, I shall fill this vacation by a faithful report of the observations which I could make, during my kay at this court, as well myself, as by some of my friends, of the present state of trade in the city of Pekin; but I must, at the same time, acknowledge to the reader, that there is much wanting to make the observations fuch as they ought to be, and might have been, if I had not been so straightened, and

if they had let me enjoy the means of informing myself thoroughly of things.

The people of Korea, who are tributary to China, come twice a year to Pekin *, viz. in the months of March and August, to the number of 40 or 50 persons, as well to pay their tribute to the Emperor as to carry on their trade; which consists principally of the following merchandises.

A fort of large paper made of raw filk, something like the large paper for wrapping up things in Europe. They make use of this paper in China for windows in place of glass.

Paper, with gold or filver figures, for hanging their chambers.

*Korea is a peninfula, eastward of the grand wall of China; it is contiguous on the west to the province of Leotang of China, and on the north to the Eastern Mongalls. The Koreans are, from time immemorial, tributaries of China, who treat them very hardly, not permitting them any commerce with strangers. Nevertheless, they do not fail to come clandestinely with their goods, by the sea of Japan, to the river Amoor, and thence by the Naunda to the city Naun, to traffic

All forts of large fans, of different fashions.

Mats, very neat and fine, which they use in summer in place of matrasses.

Cut tobacco, very (mall, for smoking, much esteemed in China, and preferred to that of their own growth.

Stripped cotton stuffs.

A fort of furs, which the Russes call chorky, and which they call colouk in Siberia; it is in great abundance in Korea; they sell a great deal of it in Pekin.

A sort of dry-sish, which they get from a certain large shell-sish in the sea of Japan.

It is with these commodities that they trade; and although they may, in a manner, be considered as the same nation with the Chinese, and in some degree their subjects, yet they do not enjoy the least liberty during their abode at Pekin; all communication and conversation with foreigners being absolutely forbidden them, and much restricted with the Chinese them

Vol. II. Oo felves:

selves; insomuch, that the Chinese are not less suspicious of them than of any other nation whatsoever. As they cannot make by their trade any thing to a confiderable amount, they generally bring with them to Pekin large sums in silver, in Spanish pieces of eight, and in Dutch dollars, which are looked upon in China as inferior to the fine filver of China, which they call the Chan's silver, by 5, 6, or 7 per cent. which shows, that the inhabitants of Korea have some trade with the islands of Japan, or, at least, with the islands lying between Japan and Korea; although it is absolutely forbid the inhabitants of that country to have the least communication or commerce with other nations, or to admit foreign ships into their ports; having, for that end, a mandarin always residing in Korea, to have an eye on the proceedings of that nation. With this money they buy, at Pekin,

The finest raw-filk.

A fort of damask, called by the Russes goly, and by the Chinese couty-toanza, that is damask of Korea; because, at first, the Koreans alone bought that sort of damask.

A fort of stuff mixed with silk, sit for linings, called by the Chinese fansa.

Tea and china-ware.

All sorts of dishes of white copper, for houshold use.

Cotton.

They likewise buy the tails of sables, to border their caps, and the collars of their robes.

It is likely that they trade into other parts with the silk and damask, which they carry from Pekin, seeing they take away much greater quantities than the consumption of their own country can require.

When there is no Russian caravan, nor any of that nation at Pekin, they quarter those of Korea in the habitation appointed for the Russes; but when there are Russes in this city they give the Koreans other

quarters; for this reason the Chinese call this house Couty Coanne, or magazine of the Koreans, when it is occupied by the Koreans, and Urussa Coanne, or magazine of the Russes, when occupied by people of that nation.

When the Koreans, whether deputies from that country or merchants, arrive at Pekin, there are two mandarins forthwith named to go to their lodgings to observe who goes in to them, or comes out from them; and to examine the cause of their coming, and how they became acquainted with the Koreans: They likewife place guards all around their quarters, to prevent any person from having private access to them. When any of this nation go abroad, upon any affair, the guard follows them every where, with large whips, to prevent any person from joining them in the street; and they dare not go to see any person without permission of the guard. As the inhabitants of Korea are not used to ride on horseback, and are afraid to mount a

horse, for fear of accidents, they give them a guard of infantry, who have no other arms, when they are in garrison, than their whips. Besides all these steps, full of suspicion, they fix, at their quarters, an edict of the court, fignifying, that all persons whatsoever are forbid to enter their house without the knowledge of the mandarin, deputed for that purpose, who, after examining them as to what they have to do there, takes notice of their names, and fends a soldier into the house with them to observe what passes. It is a very profitable commission for those mandarins who are deputed to guard the Koreans; for they always farm the privilege of trading with them to that company of Chinese merchants who offer the most money for it, which sometimes amounts to a considerable sum; and it is by no means permitted to any other merchants, besides the members of this company, to trade, for that time, with the Koreans.

The Chinese have not, in a manner, any trade with the Indies *, excepting some fmall dealings they may have on the frontiers of the neighbouring states: But it was impossible for me to get to the knowledge of what those trades consisted in ; for, among a thousand people of the inhabitants of Pekin, it is rare to find one person who hath the least knowledge of any thing that passes without its gates. It is true that the Chinese do carry on trade, sometimes at Bengal, to the Philippine islands, to Batavia, and even to Goa; but that is not brought about but by stealth, by the connivance of the mandarin governours of the sea-ports, obtained by means of a round sum of money, without the knowledge of the court; besides, it is absolutely forbid, to every subject of the empire, to go into foreign

^{*} China is separated from the country of the Great Mogul by sandy deserts, impassable for merchants; and the other provinces of India by mountains, which are very difficult to pass, and in a manner hinders all commerce between these two empires.

foreign parts, upon what occasion soever, without a permission, or an order, from the Emperor or the government*.

The Bucharians come also to Pekin, but without observing any stated times. They bring large round contelians, of a very good.

The greatest part of the Chinese, who are dispersed in several places of the East Indies, for the sake of commerce, are the posterity of those who less China when the Mongail Tartars made themselves masters of that empire; and they have no other than clandestine communication with their Chinese countrymen. They are easily known by their long hair, which is natural to them; instead of which the Chinese, subjects to the Tartars, are obliged, under pain of death, to cut their hair short, like the Kalmucks and Mongalls, who have all their heads shaven, except a tust of hair on the top of their head, which they preserve of the natural length of their hair.

the There are two Bucharias, the Great and the Little. The Great Bucharia is fituated between Persia and the country of the Grand Mogul, about the 40th degree of latitude. This is the country of the Usbeck Tartars, who are Mahometans. The Little Bucharia is fituated to the east of the Great, and extends to the frontiers of China, on the side of the desert Xama, and kingdom of Tibet, which is their confined to the south; Good colour, which they barter with the Chinese against damasks, kitaika, tea, to-bacco, China ware, and silver. They string these on small silken lines, in the manner of beads; and they are worn by mandarins of the sirst orders, when they appear at court, or in the colleges, in their habits of ceremony, wearing one row of them about

this last is subject to the Kontaysha, Grand Chan of the Kalmucks. The Bucharians are a particular nation, which have no connection either with the Mahometan or Pagan Tartars, nor with any other people of those parts. They do not know themselves whence they draw their origin. Nevertheless, they make profession. of the Mahometan religion. They occupy the towns of the Two Bucharias, and only employ themselves about their commerce. Those of the Great Bucharia carry on their trade in the dominions of the Great Mogul in Persia, and in Siberia, and are tributary to the Chan of the Usbecks. Those of the Little Bucharia trade into China, into the kingdoms of Tibet and Tangut, and with the Kalmucks and Mongalls their neighbours; these last pay tribute to the Kontaysha. The Bucharians have many customs and ceremonies, much like those of the Jews; nor is their dialect, phyflognomy, and fize much unlike them; which may give occasion to many reflections.

bout their necks, which hangs down on their bellies. They bring also musk, rough diamonds, and many other forts of precious stones; but, as I was informed, of no great value; because it is rare to find, among the Chinese, any who will risk the laying out a considerable sum for a fine stone. The Chinese polish these stones, after their own fashion, in order to make them proper for ornamenting the heads of the fair sex.

I had no opportunity of being acquainted with any of this nation, not being allowed liberty sufficient for that end; and, on their part, they dared not run the risk of coming to my house, for fear of the guard at my gate; so that I cannot give an exact account concerning them.

They also bring to Pekin gold-dust *, which the Chinese buy commonly at the Vol. II.

P p price

The gold which the Bucharians bring to China comes from the high mountains which feparate the dominions of the Great Mogul from the Grand Tartary.

price of 5, 6, to 7 laen of silver per laen of gold-dust, because it is unrefined; they assure me that it is very fine when purished, and is then equal to the gold of the Chan.

These Tartars dwell in the provinces of Chamill and Turfan *, under the protection of the Emperor of China, in consideration of a moderate tribute, which they pay him annually. In return they buy at Pekin,

Hides

All these mountains abound in rich mines of all sorts, but none of them are wrought; nevertheless they make very considerable gains annually, by the great quantities of gold-dust which the mighty torrents, formed by the rains in the spring, along with the snows melting, bring down with them into the neighbouring valleys: For the inhabitants of these mountains, together with the Kalmucks, who encamp with their cattle in the adjacent plains, come afterwards to gather these grains of gold, in the pits which the torrents have made in their passage, and barter them, with the Bucharians, against all forts of small things for which they may have occafion in their way of life.

* The provinces of Chamill and Turfan are fituated to the well of the defert of Xame, towards the 40th degree of latitude. They make a part of the Little Bucha-

Tobacco.

And of the smallest China-ware; of all which in pretty large quantities.

Besides

ria, and have been subject hitherto to the Kontaysha, Grand Chan of the Kalmucks; but a sew years since the Chinese, joined by the Mongalls, have possessed themselves of it, after having driven out the Kalmucks.

* The Kalmucks occupy a great part of the Northern Asia; they are divided into three principal branches, under one sovereign Chan, whom they call the Kontaysha; they have no fixed habitation, but always live in tents. Though the Kalmucks are indisputably the bravest of the Tartars, they are, nevertheless,

Besides the goods I have above specified; I know of no others which they bring to Pekin.

The most valuable furniture of lackered ware, viz. cabinets, chairs, tables, baskets, and other things of that sort, as also the richest porcelain-ware, come from Japan *. For, when the Emperor sends any person to Japan, in a public character, most of the princes and great men of the court seldom sail to engage him to bring them some of those things at his return. Sometimes they find means to bring these things into China clandestinely; but that is very seldom,

defirous of living peaceably, contenting themselves with the subsistence which their cattle can afford them, and do no harm to any, unless they are hurt by them; but, when once irritated, they become irreconcilable ene-

* All merchandise of Japan is contraband in China, which is the reason they cannot be brought into Russia, with the caravans from China, at least without very great risk. The small quantity of Japan goods, which are clandeshinely brought into China, being kept very private, and paid for at very dear rates by the Chinese themselves.

dom. This is the reason that the commodities of Japan are not always to be had at Pekin, unless a man would pay an exorbitant price; nevertheless they are found there sometimes reasonably enough; because seldom a year passes that the Emperor doth not amerce some or other of the great lords in very considerable sines, which obliges them to raise all the money they can on their moveables and immoveables; and whoever hath money lying by him doth, on these occasions, lay it out to great advantage, and buy the most curious and valuable things for little money *.

After the lackered ware of Japan, that of the province of Fokien is looked upon as the best; but none of it comes to Pekin, because the great lords of China oppress the merchants to a great degree, and take

It seems to be a favourite maxim, adopted in all the eastern courts, to wink at all the vile practices, and papacious impositions, of the ministers; and, when they have well plucked and drained the substance of the people, the prince then squeezes them dry for his own use.

their goods from them, upon many frivolous pretences, without leaving them the least hopes of ever obtaining any payment. For this reason, all merchants, and others of any lucrative trade, at Pekin, have fallen into the custom of putting themselves under the protection of some one or other of the princes of the blood, or other great lords, or ministers of the court; and, by this means, with the affistance of a round fum of money, paid annually to their protectors, they are able to get clear of the extortions of the mandarins, and sometimes of those of the common soldiers: For, without such a powerful protection, a merchant must be an undone man at Pekin, where every one thinks they have an undoubted right to form pretentions upon a man that lives by trade. And, if any of them are so imprudent as to attempt obtaining satisfaction, by the way of justice, they fall from bad to worse; for the mandarins of justice, after having drained from them all they can, seldom fail of ordering

dering the goods, taken from them unjustly, to be brought to the college; but he must be a cunning fellow indeed, who shall be able ever to get them from thence.

They have at Pekin a people dexterous enough at lackering, but their works fall far short of those of Japan and Fokien, which may be attributed to the disserence of climate; and it is for this reason that the lackered work made at Pekin is always much cheaper than the other. Nevertheless, the lackered work made at Pekin infinitely exceeds any work of that kind made in Europe.

The ships which arrive every year at Canton, from England, France, Holland, Denmark, and other parts, generally bring the following sorts of merchandise,

Silver of different coins.

All forts of fine cloth.

Camblets.

Woollen stuffs.

Fine Holland linen.

Standing clocks and watches.

Looking-glasses of all sizes.

Mathematical instruments.

Etwys from England.

Pencils.

European paper of all forts.

Different sorts of milliner wares.

Some forts of European liquors, especially wine.

A good part of those merchandises are distributed in presents among the mandarins of the government of that city; of the rest, the European merchants generally make a very considerable prosit. They employ the silver these bring in purchasing diverse forts of goods, by virtue of an agreement made before hand: They carry away with them from thence,

Raw filk.

Damasks wrought according to draughts furnished to them.

Wrought filks.

Lackered ware.

Tea, green and bohea.

Badians,

Badians, a seed having a taste much like aniseed.

Canes, and China-ware, made according to models given them.

They also sometimes bring away gold, but very seldom, because they generally get it cheaper in the Indies. They also find at Canton pretty valuable stones, except diamonds, but not in any great quantities.

They make the best silk brocades of China, that are brought to Europe, in the provinces of Quoantung and Fokien.

The filver which they bring from Europe to Canton is received at the same rate as that brought from Korea to Pekin; and they have the advantage of buying their goods at Canton from 30 to 40 per cent. cheaper than they could do at Pekin.

The last year there arrived at Canton a French commissary, belonging to the new India company established in Paris *, who obtained leave of the court to reside there Vol. II.

The Miffifipi Company.

or

for time to come; but, when he wanted to despatch the ship loaden with merchandile, he met with so many obstacles at the custom-house, and from the government, doubtless, to draw more money from him, notwithstanding he had already made sufficient presents, that at length, despairing to see an end of these impositions, he gave orders to the captain of the ship to weigh anchor, and depart, in spite of those people; which was done as he defired. But he was obliged, to avoid being very ill treated on this occasion, to take the Chinese habit, and to retire to a convent of Dominicans, at the distance of two ly from Canton *, where he kept himself incognito, till such time as the French Jesuits at Pekin had found means, by the force of presents, to obtain liberty for him to appear openly, with two

There are many Roman Catholic Convents in China, which, in the time of the late Emperor of China, had much the fame immunities as the convents in Europe enjoyed. No perfon durit enter but with the confent of the religious of the convent, unless by express order of the Emperor of China.

or three domestics, and remain there till the court should otherwise direct; on the condition that he and his servants should wear the Chinese habit. Nevertheless, so was afterwards informed, that the mandarins of the government of Canton let no opportunity escape them of chagreening him, insomuch, that he found himself obliged to re-imbark the first opportunity that offered itself. They also had the last year at Canton a frigate from Ostend, bearing the Emperor of Germany's colours.

For the rest, they carry to China from Europe, and bring back from China, a very great variety of toys, and different sorts of curiosities, upon which they make a very considerable profit; but these are so numerous that it is not possible to furnish a complete specification of them.

In regard to our commerce with China, it is at present in a very languishing condition; and nothing in the world would bring more prejudice to our caravans than

the commerce which is carried on at Urga *; for from this place there is brought monthly, and even weekly, to Pekin, not only the fame forts of goods which our caravans bring, but of a better quality than those brought by our caravans, and in so great quantities, that the merchandises which the merchants of Pekin, who go continually between Pekin and Urga, to trade with our people, and the goods which the lamas of the Mongalls † bring

* The camp of the Chan of the western Mongalls, who are tributaries of China, is called Urga. This prince encamps on the right of the river Selinga, about 500 versts south of Selinginsky, towards the frontiers of China; and though he doth not always encamp in the fame place, yet he fektom quite this country without indispensable necessity. By virtue of the last convention of the frontiers, the Russians of Selinginsky might freely come to Urga to barter Russia hides, and the coarfe woollen cloth of Siberia, against cattle; but as, under this pretext, they brought great quantities of valuable furs, which they fold against the merchandises of China, this clandestine commerce much injured the trade of the caravans of Siberia.

+ The pricits of the western Mongalls, and the Kalmucks, are called lamas; there are different orders-

bring from their parts, amount every year to four or five times as much value as the caravans that come to Pekin in the name of his Czarish Majesty. And I have been informed, by those who have been employed by the great men of Pekin to buy their provision of furs at Urga, that there they can buy finer, and more valuable black fox-ikins, than they have ever seen in our caravan. I must add besides, that these great quantities of our merchandises brought from Urga to Pekin, do considerably lower the prices. The merchants of Pekin, and the lamas of the Mongalls, who bring them to Pekin, are always capable of affording them four or five per cent. lower than the commissary of the caravan can, of which the reader will be easily convinced, if he gives attention to what I am about to lay before him.

The Russ merchants, and all other people that come and go continually between Selinginsky and Urga, buy their goods where they find it most convenient;

310

instead of which, the commissary is obliged to receive those he brings with the caravan, out of his Majesty's treasury, from sworn apprisers of the treasury, who often fet so high a price on them, that they find it difficult to sell them for half the price valued at to them. Another advantage which those who go to trade to Urga enjoy, is, that they make the journey thither in ten or twelve days; and, beginning their traffic immediately on their arrival, they are ready to return in two or three days after; in place of which, the commissary, after having been at considerable expence, can with difficulty enough get to Pekin in three months; and, when he gets there, they keep him thut up fix or feven weeks, according to the maxims practifed by the Chinese hitherto; in consequence whereof the abundance of merchandise of Russia arrived at Pekin obliges them still to spend several months in getting quit of theirs: And as, by the last treaty, they are obliged to maintain themselves, and all those

belonging to the caravan, at their own proper expence, all these circumstances cannot fail of occasioning a very material difference in the balance of their trade. For, before they began to trade at Urga, a caravan, how large foever, was all fold off in three months, at the prices set by the commissary himself. Moreover, all the Chinese who traded at that time with us became rich; instead of which, all those who have traded with us fince that time have traded to their own loss, and may be deemed at present quite ruined. The expences of a journey to Urga are very trifling; for they can buy at Selinginsky as much provision for ten roubles as will serve ten perfons for a month; in place of which, ten roables will hardly ferve them a week at Besides, those who go into China to trade are obliged to buy forage for their horses, &c. in place of which, those who go to Urga to trade, put their horses to grass, without costing them a farthing. The Chinese merchants, on their side, who come to Urga to trade, are likewise at much

less expence than the commissary; because they buy at Pekin, and the towns through which they pass, tea, tobacco, rice, and other grains, ordinary damasks, kitaika, and other like merchandise, at a very low price; which they barter, on the road with the Mongalls, against horses, sheep, and, in a word, all forts of cattle; infomuch that, as the private merchants make both their journey, out and home also, with infinite less expence than the commissary of a caravan, it cannot be otherwise, than that they can buy and fell their merchandise on much better terms than a commisfary can, who is obliged to remain, with a number of attendants, in a city where living is so dear as at Pekin, a longer time than would serve a merchant at Selinginsky for making four or five journies to Urga. In fine, when the caravan returns to Russia, they find, after such great expences, that the quantity of Chinese goods brought to Russia by private traders, is so very large, that they must sell theirs at a very mode-

rate price. All these circumstances well considered, it is easy to comprehend that, upon closing the accounts of the caravan, the profits cannot, at this time, be much more than the disbursements. But, to return to our journal.

August.

The 14th, I received a letter from Commissary Istopnikoss, dated from the river Tola * 29th of July; by which he desired me to prevail on the council for the affairs of the Mongalls † to fend him an affignment

* Tola is a river in the country of the Mongalls, which comes from the east, and enters the river Orchon about 250 verils fouth east of Selinginstry. By virtue of the new regulation, the caravans of Siberia who go to Pekin ought to enter on the territories belonging to China upon their patting this river.

† The council for the affairs of the Mongalls at Pekin is a college, who have the care of every thing regarding the nation of the Mongails, as well those who are the hereditary subjects of the Emperor of China, as also those who are only under the protection of this empire. This college, at the same time, enters indirectly into the cognizance of all the affairs which regard the powback the following answer: That they had indeed found in the registers, that the council had formerly advanced money to the commissary but that the trade was an object of to little conceined with them, that they did not think it merited the council's being incommoded with proposals of that fort."

The 18th, a mandarin came to me from the council, and notified to me, that his Majesty, calling to remembrance my being at Pekin, had given orders to the council, that I should be escorted to Jegcholl by a mandarin, and some of the military. Whereupon I answered him, that I would be ready the next day, with my interpreter, and two domestics, if they would take care to provide the relays which I should want for the journey.

The 19th, all being ready for the journey, Heft Pekin very early in the morning.

The 2 rst, I arrived at Jegeholl, and repaired forthwith to the court; and having

found the chamberlain of the Chan, who is generally an eunuch *. I prayed him, according to the cultom of the country, to inform himself, on thy behalf, of the health of the Bodgdoi-Chan, and to inform his Majesty of my being there; upon which his Majesty did me the favour of sending to me a falver covered with all forts of new fruits, which were followed by another, charged with divers forts of meat from his kitchen; he ordered me to be told, at the same time, that he sent me those for my refreshment, and that I would do well to keep my chamber the rest of the day, to recover my fatigue from the journey. The same evening, some of the Father Jesuite being come to see me, told me, that the alegada had resolved to propose to the Emperor

All those who serve in the chamber of the Emperor of China are ennuchs, and are either Chinese or Mongalls; the Chinese nation being not less jealous of the fex than other castern people; but the Mongalls, and generally all the Tartars, are not very liable to this malady.

peror to make the caravan encamp in the desert, near Kalchanna, till the court should return to Pekin; supposing that so many of the court, and the greatest part of the people of distinction, being in the country, there would be nothing to do for the caravan at Pekin; and that they believed that he would not fail of requiring from me an order to the commissary for that purpose. It was easy to see, that what determined the minister to take this resolution, was nothing else but his apprehenfions that the presents he expected to have from the commissary, if he should be at Pekin at the time of his arrival, might, if he was absent, fall into other hands. as this was a design that might be attended with very bad consequences, and might have been the cause of the loss of men, as well as the horses belonging to the caravan, by being exposed to the extremity of cold and famine in the deserts, I became obliged to use all my efforts to render this intention of the minister abortive.

ing

The 22d being to go in the morning to court, the Emperor sent the master of ceremonies to require of me passports for some mandarins which were to pass the frontiers of Russia; but, as I could well penetrate the grounds of their errand, I thought it my duty to resule the passports demanded. Nevertheless, notwithstanding all my excuses which I could muster up, to exempt me from giving them, the master of the ceremonies came to declare to me, in the clearest terms, the next day, which was

The 23d; "That the Emperor was, at one time, retolved to fend those people away, whether I would give them passports or not; but that I ought to consider, that, in such case, I might expect an absolute denial to every thing which I might have to propose." Which convinced me, that it was absolutely necessary for me, on this occasion, to conform to his Majesty's pleasure, if I would retain the least hopes of succeed-

ing in my desire of opposing the designs of the minister. For this reason,

On the 24th, when the master of the ceremonies came again to speak with me on this affair, I put into his hands a letter, addrelled to the officers commandants on our frontiers, in the form he desired to have it; to which I joined the condition, that our caravan should not be hindered from coming to Pekin directly; and that our commissary should, on his arrival at Pekin, immediately be at liberty to begin his commerce, without being shut up for a certain time, as had at some times been practised. The master of the ceremonies promised to speak to his Majesty about it; who had not only the goodness to give his consent immediately, but he, at the same time, gave strict orders to the president of the council, that he should take special care that no person whatsoever should go about in any manner to interrupt the commissary in his business.

The 25th, a Portuguese Father Jesuit, called Father Maurano, came to me, and told me, "That there was a person of quality, who, by him, made me an offer of 10,000 laen of silver, till the arrival of the caravan, which I might employ in what manner I thought proper; and that this Lord was very much scandalized at the disobliging answer I had received from the council of the direction of the affairs of the Mongalls, in regard to the 2000 laen of silver which I had required of them for the necessities of the carevan. Upon which, pressing him to let me know who this Lord might be, he told me, " That he was indeed forbid to let me know who this person was; but that he would nevertheless, in confidence, own to me that it was the 9th prince, son of the Chan, who made me this offer *. Thereupon I did not omit testifying

^{*} The late Emperor of China had seventeen princes born of his several wives and concubines. There were three present at the first audience of Mr de Ismayloff,

testifying to him how much I was touched with the generofity of a Prince to whom I had never the honour of paying my devoirs; adding, "I should never forget the good will which his Highness was pleased to show me on this occasion; and that I should all the days of my life retain the same sentiments as if I had received his generous offers." But the Father Jefuit. having remonstrated, "That the Prince might possibly think himself offended if I should refuse his offer altogether," I was obliged to accept of 1000 laen of filver *.

The who where all very well proportioned, having fine

complexions, and black eyes, well formed, without the least appearance of the deformities of the Mongall nation.

There is an appearance as if this was a snare laid for Mr De Lange, to render him suspected by the Emperor of China, who, in the defign which he had then formed of leaving the succession to his third son, could not fail of taking umbrage at the least false step which the agent of Russia might happen to take on this occasion, which might induce this monarch to consent to his being fent away, which was probably the whole aim of this intrigue.

Vol. II.

The 26th, I paid a visit to the Father Jefuits of the French nation *, where I found the president of the council, who let me know, by the mouth of these Fathers, "That he was come from receiving the Emperor's orders, which were so favourable to our commerce, that there is no instance of the like liberty having ever been granted

* The Jesuits had great ascendency on the late Emperor of China; and, as the present Emperor hath been under their hands, it ought not to be doubted but he is likewise well affected to them, whatever may be reported to the contrary. At the first audience of Mr De Ismayloff, the Emperor being seated on the throne, had on his left, as the place of honour, at three paces distance, a little advanced into the hall, three of the princes his fons; and, on his right, a little more advanced, the Jesuits belonging to the court; at five pa. ces behind them, a little more advanced, were placed feven Mongall princes of the Imperial house; then, on the two fides of the hall, the ministers and grand mandarins of the court; all fitting cross-legged, according to the manner of the Tartars. By fo remarkable a diffinction it may, in some degree, be comprehended how much these good fathers were in favour with the Emperor.

granted before in China." I answered him, through the help of these Fathers, "That I had no reason to doubt of the punctual execution of his Majesty's orders, since he had the goodness to charge the governour-general of Pekin with them; of whose indefatigable zeal for maintaining a good understanding between the Bogdoi-Chan and the Czar my master, was sufficiently known to me." Whereupon he caused me to be told, "That he was not a man capable of receiving presents from foreigners, for doing them a service, as many others did in such cases; and that a step of that kind would entirely prevent him from ever having the liberty of speaking to his Majesty again in favour of any person whatsoever, should it come to his Majesty's ear; but that, nevertheless, he believed he might reserve to himself the privilege, when he should come to our house to buy any thing, of being treated more favourably than others in the price." Upon which I assured him, "That we should always know to treat him with proper distinction in such a case."

The same day, I desired the master of the ceremonies to make my most humble acknowledgments to his Majesty, for the gracious reception which he had been pleased to honour me with, during my stay at Jegcholl, and to pray his permission for my returning to Pekin; because I apprehended the caravan would foon arrive there. He came, some hours after, and informed me that his Majelly intended, the last day of this month, to go upon a party of hunting in the defert, some leagues from Jegcholl, and that I might lay hold of that opportunity of taking leave of his Majesty, and of returning to Pekin. He added, that his Majesty had likewise ordered the governour of Pekin to go thither, and deliver to me the tapestries he had caufed to be made to the Czar.

During the rest of my stay at Jegcholl, my table was furnished daily, the same as the first day of my arrival, from his Majesty's

jesty's kitchen. And they showed me all the buildings and gardens of this charming place, which is certainly worthy to be the delight of so grand a monarch, and is infinitely superior, in beauty and magnificence, to the palace at Pekin or Czchanzchumnienne.

The 31st, I had the honour of attending his Majesty when he parted from Jegcholl; and, on this occasion, he had the goodness to ask me, " If I enjoyed my health?" After having answered with all the respect due to so gracious an inquiry, he said to me further, "That he thought he observed some alteration in my countenance, and that I ought to take care of my health." After which he gave me permission to return to Pekin, after having, by the master of the ceremonies, let me know, that, if the caravan had not been so nigh, I should have had the-honour of accompanying him to the party of hunting *.

Sep-

^{*} Hunting is the favourite employment of the Tartar pagans. And one may gather the inclination of

September.

The 3d, I was returned from my Jegcholl journey, being three days on the road.

The 7th, I sent my interpreter to Kalchanna, to the commissary, with 1500 laen of silver.

The roth, I acquainted my mandarin, that, as the caravan was at hand, it was most necessary that the house should be repaired; that I might not continue under apprehensions of the merchandise being damaged, for want of sufficient cover, during the rainy autumnal season. But he continually resused me the liberty of getting

the Tartars from the pleasure and assiduity with which the late Emperor of China followed the chace; nevertheless he mixed much of the politician with his favourite passion; for going every year a-hunting, escorted by a body of the army, consisting of sifty or sixty thousand men, completely armed, and generally travelling too leagues in this manner, this monarch thereby inured his courtiers and his troops to the use of arms, and to satigues, and prevented their salling into the soft and indolent manner of living peculiar to the Chinese.

ting it repaired of myself, under the promise that he would take care to get it repaired before the arrival of the caravan. But, seeing one day pass after another, and nothing done, I went, on the 15th, to the president, to pray him to give orders for repairing the house, at the least, not to oppose my doing it at my own expence. But his answer was, he would instantly hire the workmen, and it should be repaired in one day. And these promises were daily repeated, as well by my mandarin as by the president, till, at length, the commissary arrived with the caravan at Pekin. on the 29th. As it rained very hard during that whole day, the commissary found, at his arrival, that there was no place where he, or any of his people, could be covered from the rain; and he was obliged to let all the baggage of the caravan remain in the court-yard, without being able to fecure one single parcel. As soon as the caravan was entered into my court-yard, they reinforced the guard at the gate, and

posted centinels all around the house, to fecure us, as they said, against thieves; but, in reality, to prevent our commissary's having any opportunities of trading with any person whatsoever, till such time as they should receive the merchandises, which they might pretend to have occasion for, for his Majesty and the court. Besides which, they ordered two mandarins, with a clerk, to remain in our house, to take good care that no merchandise was sold on credit, and to note down exactly the names of all that should come into, or go out of our house; what goods, and how much, they bought, and at what price.

October.

In the beginning of this month I fent again to the council, on the subject of the repair of our house. Upon which they let me know, the 6th, by a clerk, that the president had sent a courier to his Majesty, to be informed if his Majesty would be pleased to have our house repaired by the treasury,

treasury, or if it was our business to repair it; the Emperor, by virtue of the last convention between the two empires, not being obliged to famish any thing to our people. Whereupon I patiently waited till the

12th. The workmen came at length to make the reparation to often premifed; but it was done so negligently, that, when they made an end, there was little alteration for the better. The commissary employed the rest of this month to unpack the goods, that he might put every thing in order against the time he should be permitted to begin to trade. In the mean while, we were visited very assiduously by four mandarins, who pretended to be deputed from the court to receive the merchandises appropriated for his Majesty, demanding, from the commissary, an exact specification of all the goods brought by the caravan, that they might chuic what was necessary for the service of the court. They were answered, "That they need Vol. H.

Sot expect that the commissary would give them a specification of all he had in the caravan; but that, if they had any orders of the court for us, they ought to produce letters of credit, addressed to me or the commissary; or, at least, to let us see a specisication of the goods wanted, figned by the master of the wardrobe of the Emperor, whereupon they should know if such goods were in the caravan or not." But these gentlemen would not quit their demand fo, alledging, "That they must go according · to the customs observed in times past, when the commissary of every caravan had been obliged to give fuch a specification to those deputed by the court to receive the goods from him; that they did not intend to be ferved at this time as they had been with former commissaries, when the court got goods of but indifferent quality, after the best goods had been disposed to private persons; that, to this end, they should be careful to examine all that the commissary had brought, and that they would take

them."

what they wanted, for the court, out of the best they could find, particularly sables, at three laen per pair, as usual." The commillary, feeing these people pretend to insist on his giving them goods at such an under price, craved from me the protection of the Czar, our common master, alledging, that he had fables which cost him 20 or 30 roubles the pair; and that it was eafy to comprehend what market he should make with the rest of his goods, if he should be obliged to fell the fables at fuch a lofing price. Upon which I made the deputies understand, " That the merchandises of the caravan did not belong to the commissary nor to me, and, in case they did, it was not to be supposed that we should credit them at all, at least without their bringing a specification in form, figned by the person who hath the superintendance of these affairs at court. But that did not fignify, they had only to bring their money, and, when the commissary had shown them the goods, he would fee if he could agree with

offence at this answer. Nevertheless, they engaged at last to bring such a specification; but they deferred it from one day to another. In the mean time, they made use of all their cunning to prevail on us to deliver them, at an under price, all the goods they thought sit to take.

November.

from

The 1st of this month, having sent my interpreter to the council, to desire them to admit the commissary to the liberty of trading, they let me know, in answer,

"That it was impossible to do it before the deputies of the court had received the goods they had to receive for his Majesty."

The 4th, I spoke of this affair, not only with my mandarin, but also with the Kientu, or mandarins appointed to our house, to the end that they should dispose those people to give us their specification, in order to end this affair. The same day I went to meet his Majesty, who was returning

from the hunting, and met him on the 5th, at 80 ly from Pekin, at the hot-baths of Tangzchang. His Majesty told me, "That he had received news from Europe, that his Czarish Majesty had made peace with Sweden, by the mediation of the Roman Emperor." After which he asked me, "How long the caravan had been arrived?" Upon which I answered, "That they were, indeed, since the 29th of September, at Pekin; but the commissary had not yet got permission to trade." Upon which his Majesty, dismissing me, went to the bath.

I must, on this occasion, acquaint the reader with the custom of this empire, in such circumstances as this of the deputies above mentioned. All the mandarins that are charged with any commission of the court, be it to subjects or foreigners, are named and despatched by the ministry. When such commission is finished, these people are obliged to make presents, not only to the ministers, but also to the princes

of the blood, to the end that they may not give them too much trouble, and that they may keep something to themselves. They have no cause to fear that the people, with whom they have to do on these missions, will find access to the ministers, or that ever a ferious inquity will be made into their conduct; which is so true, that no person will readily undertake to make complaints of their tricks, because there is no reparation to be expected. No person can carry his complaints directly to the Emperor, but they must absolutely be made by the ministers, or those who hold the first office of the palace, or the chamber of his Majesty; and these gentlemen are so closely linked to the interests of the other great lords of the empire, that, whatever party the fufferer may address himself to, he will certainly remain the dupe of the affair.

The same day, the deputies endeavoured again to get some goods from us, while the specification

specification might be made out; but their design did not take essect.

The 9th, I spoke again to the mandarins of the council concerning our caravan; but I could get no other answer, but that this assair regarded the deputies of the court only.

The 14th, when I would have gone out myself to the council, the guard, at our gate, stopped me, under pretext that the four mandarins, deputies from the court, had ordered, that no person should be suffered to go out till the goods, which they ought to have for the court, were sirst delivered. Though I passed in spite of the guard, I was nevertheless obliged to return without doing any thing, as the president was not in the city.

The 15th, I sent my interpreter to the council to receive the resolution of the president, upon what I had represented the day before; and as he found him not there, but was told he was at home, he went thither to speak with him, and brought

me the answer following, " That the prefident would take care that this affair should be ended out of hand; that, to this end, it was nevertheless necessary, that the commissary should put a reasonable price upon his goods." He defired further my interpreter to tell me, that, at this feafon, he, was rarely at home, because he was obliged to be all day long at Czchan-Zchumnienne attending his Majesty; that, when I should have any affair to propose to him, I should communicate the same, by my interpreter, to the mandarins of the council, who would not fail making him the necessary report immediately.

The 16th, the deputy mandarins having made up, according to their own fancy, a specification of merchandises to be received by them for the provision of his Majesty and the court, they came to present it to us, in order, by means of this imposition, to get a large parcel of goods from us.

But the 17th, this specification being translated into the Russ language, we found

that the quantity of merchandise which they demanded was much too large to be agreed to. For which reason, it was asked of them, "From whom this specification was sent to us? and who made it out?" Upon which, after many turns and tergiversations, employed to no purpose, they were at length forced to acknowledge that it was of their own forming; it being their opinion, that fuch a quantity would be wanting for the use of the court. But, in making this avowal, they did not fail to make the commissary apprehend, "That he need not flatter himself with a liberty of trading with any person, before they should receive all that was contained in the specification."

The 18th, the alegada being come to our house to buy some goods, I besought him to remember the promises which his Majesty had been so good to make to Mr de Ismayloss on the subject of freedom of commerce, seeing, that by the course which affairs took at present, it looked as if they

were entirely forgot. But he gave me for an answer to all, "That it was an affair that did not in the least regard him, and that I had none but the council to address myself to *."

The 22d, I sent my interpreter to the council with a memorial on the subject of this affair; but the mandarins he found there resuled to receive it, under the pretext, that they must have before-hand the orders of the president thereupon, and know from him whether they should receive it or not.

The

In China all is done by the disposition of disferent colleges, to whose cognizance the affairs may belong; it not being permitted to address the court directly, upon any affair whatever. In the time of the last Chinese Emperor, these colleges were so absolute, that, on many occasions, the Emperor himself dared not middle with their decrees; but, since the Tartar princes have been in possession of the throne of China, they are not much regarded; witness the exercise of all forts of soreign religions publicly authorised, and the allowance of a Russian agent at Pekin, agreed to by the sole good pleasure of the Emperor, in opposition to the remonstrances of his ministers, and to the constitution of the government of China.

The same day the four deputies, being come to see us, gave us to understand, "That the usual time of keeping the commissary at home being nigh finished, they were come to commence a trade with him, and to know how much he demanded for each fort of merchandise, to the end that, after they had finished their bargain with him, they might then declare our house free for every body to enter." Whereupon I demanded of them, " Who could have authorifed them to shut up, in the manner ufual with flaves, for any time, the subjects of fo potent a monarch as was the Czar my master?" But these gentlemen, not finding it proper to answer so ticklish a question, contented themselves with faying, "That it would be well for the commissary to resolve to give them the merchandise they required, and that at a reasonable price, unless he would, out of wantonness, involve himself in expences which would much exceed the profit he thought to make by his obstinacy; and that, in the situation

he was, being obliged to feed his people at his own expende, he afted directly contrary to his own interests, not to close affairs with them." Thereupon I desired to know, "If they had orders to press us, in to violent a manner, to deliver them the merchandises." Upon which they answered, "No; and that they were come to deal with the commissary, but that he must let them have the best goods at such prices as the court always paid." The commisfary, to make his last effort, offered them merchandises, of the same quality as those which the court had received at other times, without advancing the price; but that did not close the affair. They went away, saying they would consult together, to see if it was feasible for them to augment the price of the goods above that which the court had always given.

Soon after they came from the council to inquire for my interpreter, to communicate to him the answer of the president concerning my memorial. Upon which I

feat him directly with the said memorial, no way doubting, but, after what the prefident had himself told him, it would be received at once: But, on his return, he acquainted me, that the president had ordered a mandarin to let me know the answer, which I wrote, word for word, from the mouth of my interpreter. "I applied to the allegamba on the subject of the memorial of the agent, and he not only forbid us to receive the faid memorial, but also charged me to tell the agent that which he had formerly told Mr de Ismayloff, viz. That commerce is looked upon by us with contempt, and as a very trifling object; that the agent himself was not ignorant that we had long refused to admit the prefent caravan, and most certainly should never have consented to, its admittance into China, if his Majesty had not suffered himself to be persuaded to it, at the reiterated instances of Mr de Ismayloss." That the allegamba had, at the same time, added these words: "These merchants come here

to enrich themselves, not our people, which is eafy to be seen, because they pretend themselves to fix the price of their own goods, that they may sell them the dearer. For these reasons, go tell the agent, that we shall not only refuse to receive the said memorial, but that, in future, he need not give himfelf the trouble of propoling any thing to us that may be relative to commerce, because we will not embarrass ourselves hereafter with the merchants of Russia." Whereupon our confinement continued much the same as before; insomuch, that it was only permitted to the domestics of the first minister, of the president, and a clerk of the wardrobe, to enter our house, which they did very frequently, and, in all appearance, to spy what passed in our quarters, in hopes that we should be obliged, at length, to submit our trade to their discretion.

The 25th, I understood that the brigadier, who, till that time, had the charge of the guard at our house, was restored to the good graces of the Emperor; and that his

Maieffy

Majesty had made him grand marshall of the court, with the command in chief of the army which this monarch keeps in the country of the Mongalis*. Whereupon I repaired immediately to his house, to pay my compliments; and having found an opportunity, at the same time, of acquainting him with what had passed regarding the

* The Mongalls are Tartar Pagans, who dwell to the north of China. They are divided into two branches, of which the first is that of the Eastern, or of the Northern Mongalls, or the Nieuchu, who inhabit towards the coasts of the sea of Japan, between the river Amoor and the Grand Wall; these are the natural subjects of the Tartar house which at present fills the throne of China; and are the very people, who, in the last century, made themselves masters of the empire of China. They are brought up in extreme gross idolatry, and have in a manner no religion. They, for the greatest part, dwell in towns and villages, and apply themselves to agriculture. The second branch is that of the Western Mongalls, otherwise called Calchies. These last are only under the protection of China, without being entirely subjects, having their own proper Chan. They live in tents, and subsist by their cattle, without cultivating their lands. Their religion is the worship of the Delay-Lama.

the four mandarins deputed from the court; he gave me his word that he would go to court that day, to inform himself circumstantially of that affair; and that, afterwards, he would order them to receive what might be absolutely necessary for his Majesty and the court without further delay. He, at the same time, seemed to be extremely surprised at the conduct of his brother the allegamba on this occasion.

The 27th, the first minister being come to our house, told me, "That he understood the interdict on our house was not taken off, and desired me to acquaint him with the cause of it." Upon which I made answer, "That I had, for a long time, endeavoured to find it out, but I could find no person who would seem to know it. Nevertheless it must, in time, be cleared up, seeing it was a notorious injustice to keep a caravan thut up so long, that came upon the faith of treaties solemnly ratisfied." He replied thereupon, "That the court, for a long time, resolved to admit no cara-

1721.

vans, because all the merchants, who had traded with the Russes, were reduced to the lowest ebb, by the very great quantity of Russ goods which were at present in China; that it was on the very strong instances which Me de Kmayloff had made, as well to the court as to the council; offering, for this purpose, that the commissary and his people should subsist, for the future, at their . own expence; that, in the end, they had admitted the present caravan; that the commissary, so far from having any regard to these circumstances, refused now to take the usual prices, that had been offered him for the merchandise which the court had occasion for, and infifted on a very high price for them; that he wished I would bring the commissary to reason in this affair, and let him know the result." Upon which I told him, "That I had nothing to do with putting a new price on goods which the commisfary had in commission; that it did not depend on me, as it was the commissary who was to account for the goods with which he was entrusted, who would not permit

Vol. II.

any other besides himself, who sold them, to fet a price; that, as to what regarded the admission of the carayan, it was stipulated long before Mr de Ismayloff's arrival at Pekin, and there could not the least alteration be made in it, without shaking the foundations of the treaties concluded between the two empires; and supposing any alteration was to be made, it could not be done but by mutual confent, and after deputies, appointed for this purpose by the two empires, should have examined this affair to the bottom, and made a new plan of convention." This answer seemed to nettle the minister, who broke up the converfation, and ordered the commissary to show him some goods.

December.

The four mandarins, deputed from the court, finding, at length, that we rather chose to have our consinement continue, than to submit to their unreasonable pretensions; and that, on the other hand,

the grand marshall of the court interested himself strongly in our favour, and would absolutely have an end of this affair, the interdict on our house was at last taken off. And,

The 2d of this month, the council made publication, that it was permitted to all persons to come and trade with us; but they used one piece of chicanery, which hurt us much, and really kept off all the merchants; for, when they perceived the merchants began to refort to our house, they made known to them, " That no perfon should carry out the least thing, of what they bought at our house, without showing it first to the fear mandarins dewhat they found proper for the use of the court.". This notification took away from the merchants all desire of trading with us, feeing they were affured of being great fufferers if they were obliged to pass through the hands of these greedy mandarins; which made me acquainted, more than a-

ny thing elfe, with the misery of the profession of a merchant in China, who are obliged to depend on the discretion of mandarins and soldiers, who have none. But the poyamba or grand marshall of the court, having been informed of it, had the goodness to remedy this new grievance, ordering the mandarins not to take any thing for the use of the court, from any other person than from the commissary. For this purpose he sent, at the same tine, his steward with them, to the commissary, to tell him, " That he came with them, by order of his master, to see how much, and what forts of merchandifes these gentlemen would take, to the end that they might make him an exact report." Whereupon they were shown the goods; but they afted fo much upon the referve, in presence of this man, that they took in all but a very middling parcel of goods. Nevertheless, this did not prevent their repairing every day to our house, to take from the Chinese merchants what goods they thought proper. And the more to counteract our trade, the ministry had represented to the Emperor, that there had been brought, during many years, from year to year, into his Majesty's magazines of fur, a much greater quantity of sables than were necessary for the consumption of the court; and that, as this quantity augmented annually, it was better that his Majesty should order some of them to be sold, than to let them lie and spoil.

The 12th, 13th, and 14th, many Chinese merchants, and other persons from the great houses, and ordinary people of Pekin, having come to our house, ventured to buy some squirrel skins, and other goods of small value, in order to discover the true designs of the mandarins who kept themselves at our house; they did not oppose them until they had fixed their bargains; but, when the bargains were concluded, they signified to them that they were not so carry out any of the things they had bought,

bought, till they should choose the best of what they had for the court.

The 15th, as they were apprifed at the court and council that we had begun to trade, they published that they would sell, at reasonable prices, 20,000 sables out of the fur-magazines of the Emperor; whereupon all those who had begun to trade with us went to supply themselves there; fome for fear of the chicanery of the mandarins, others in hopes of buying cheaper there than with us. In short, they fold, by what I could afterwards learn, the best fables at two one-half laen, middling at one one-half laen to one, and the least at go fun; but these were not Siberia sables. but those of the Tonguses *, under the dominions

^{*} The Touguses are a Pagan people of the north of Asia, who are very probably the descendants of the Tartars. They occupy a great proportion of the eastern parts of Siberia; and some branches of this people extend themselves even to the southern banks of the river Amoor. The last party of the Tonguses is subject to China; all the other Tonguses are subjects of Russia. Vide Histoire Genealog. des Tartares.

minions of China, taken about the border of the river Amoor *, of which they furnish annually a quantity to the magazines of his Majesty. The country whence these sables are brought is called Solloni.

The 16th, I was informed, that, notwithstanding the court had consented to a free commerce between the two nations, free of all duties, the mandarins belonging to our house had given the strictest orders to our guard, not to let any the least thing of any kind be brought into our house, without producing a billet from them; and such a billet cost them 30 zschosses, which make about four fun. But those who would have free ingress and egress to our house to trade, were obliged, once for

Alia. It takes its rife in the country of the Mongalls, near the river Selinga, and running from thence eastward, it makes the frontier of these parts, between Eastern Siberia and the Oriental Mongalls; and, after a course of more than 300 German leagues, it discharges itself into the sea of Japan, in lat. 44 degrees north.

ipoke

all, to make a fixed agreement with them, either for a certain limited time, or for the whole time we might stay at Pekin; upon which they received a billet, which entitled them to come into, and go out of our house, as often as they pleased. All those who refused to pay in this manner for the freedom of entry into our house, were sent back, as people who came to our house to borrow, or perhaps steal on occasion.

The 17th, my mandarin being come to fee me, I told him, "That I was very glad to learn that the court had also begun to enter into trade, which they had before looked upon as so contemptible a thing with them, that they always reproached us with the little importance of it; that, since his Majesty had given such authentic marks of the esteem he had for commerce," I hoped that, in time to come, they would speak of it with more circumspection." Whereupon he replied, "That it was not with a view of interest that the Emperor had ordered the sables to be fold that I.

spoke of, but that the fale was made purely because, having so great a quantity of them in his magazines, he thought it better to order them to be fold, than that they should lie there till rotten." I thereupon told him, "That if, at the court of his Czarish Majesty, and in his empire, they could make use of all the furs which the country furnished, they would probably fee very few of them in China," After which, I demanded of him, " If it was with the knowledge of the Emperor that the mandarins placed at our gate fold, to the people who had bufinefs with us, 'permits of pallage in and out, and absolutely denied entrance to our house to those who would not pay for those permits?" I would likewife be informed by him, "What was the meaning that the four mandarins, deputies of the court, were continually in our house?" His answer to which was, "That the Emperor knew nothing of it, nor did any person dare to tell him of it; the alegada having given them leave to fell fueli Vor. II.

permits, as a small casual profit; that, as to the mandarin deputies, they were ignorant of the consequence of what they did." Whereupon I told him, at the conclusion, "That I did not comprehend why the ministers were so averse to us in every thing, even to the refusing to see us, or receive our memorials; that I wished, with all my heart, that they should not carry it so far, as to oblige me to carry my complaints to the person of the Bogdoi-Chan direct; and further, that I asked nothing but what was conform to treaties, and that, if the treaties were to sublist in their full force between the two empires, there was an absolute neceffity to hear what I had to fay, and to give fuch refolutions as they should think proper, upon the memorials which I should, from time to time, present them on the occafion."

The latter end of this month, his Majesty made a tour to Caisa, which is a palace, with a fine park, some lys to the
south of Pekin, where he passed some

weeks; which was the occasion that nothing remarkable passed, during this time, between the ministers and me.

January 1722.

The 15th of this month, the guard at our gate refused entrance to some carts of hay which my people had bought, because the peasants had not billets of passage, and they would not give any thing to the soldiers; and, notwithstanding I sent to advertise the mandarins, and officers who commanded the guard at our gate, of this insolence of the guard, they, notwithstanding, drove away the peasants with their hay. I complained of it to my mandarin, but to little purpose.

The 16th, after having received the news of the perpetual peace, concluded between his Czarish Majesty and the Ottoman Porte, I caused Te Deum to be sung in the church of St Nicolas, and celebrated the rest of the day in festivity.

February.

The 2d of this month, and according to custom, I offered some presents to his Majesty on the new year, which is a ceremony that must be observed by every person vested with any public character, unless he would expose himself to a general censure. His Majesty received my little presents very graciously, and presented me, in return, with some of all the forts of game he had taken at the hunting the last autumn *, and of a good number of sheep; and it is in this manner that his Majesty is accustomed to regale annually, at the close of the year, those people of his court that he would diffinguish.

The 4th, which is the last day of the Chinese year, the court ended the year with a feast, which was very short, because his Majesty was but just recovered from a

fit

^{*} The Mongalls, and other Pagan Tartars, have a particular method for drying all forts of flesh, by the air and the sun, which entirely prevents their perishing; by which means they keep wild-sowl from one year to another.

fit of illness which he had laboured under. On this occasion, I had the honour of sitting over against his Majesty, at some distance from the throne; and this place is a little below the feat of the Princes of the blood, but above that: of the mandarins of the first class. The feast being finished, and his Majesty retired, the master of ceremonies came to tell me, that I might be difpensed with coming the next day, being new year's day, to court, to pay my compliments to his Majesty, seeing it was the custom of the Princes of the blood, and mandarins of the empire, to be all ranged in the court of the castle that day, every one according to his rank, where, as I was a foreigner, I could have no rank.

The 14th, the first minister gave me and the commissary a dinner. On which occation there passed nothing remarkable, unless that he asked me, "If I was not to return with the caravan?" Which made me think they had already settled this affair at court, I answered him thereupon,

"That it did not depend on my pleasure to leave the court, where the Czar, my master had sent me to reside, till he should recall me."

The 18th and 19th, his Majesty caused the celebration of the feast of Lanthorns, which had been annually celebrated, at the court of China, for above 2000 years. This feast was solemnized at Czchanzchumnienne with great magnificence. During the grand entertainment, which was that day at court, they represented all forts of plays, and other diverting shows; and, at night, they exhibited grand fire-works; which, joined to fo many illuminations, and to the prodigious quantity of lanthorns, adorned with figures, and diversified with all forts of colours, caused a surprising agreeable view, during the darkness of the night *. They placed me, on this occa-

* The Chinese are accustomed to be at very great expense at this sestival, in sire-works and in lanthorns, having lanthorns that will cost them 10,000 laen, and upwards. The sire of their rockets are also remarkably

occasion, the same as they did the last time at Pekin, at the distance of some paces from the Emperor's throne.

The 20th, being returned to Pekin, some of the principal of the Korea merchants came to see me; but, when they would have entered my apartment, some of the soldiers who accompanied them opposed it; and they narrowly escaped the lash of the foldiers whips, who had lifted them against those merchants. Upon which I presently ordered them to be kept, by our people, in the court before my house, to wait there till the merchants should go out of my house. And I, at the same time, gave them to understand, that they, for the future, would do wisely not to make use of their whips at my house. After which the merchants indeed entered into my apartment, but dared not make any stay there, for being infulted by the foldiers that efcorted

heautiful. The variety and liveliness of their colours surpass the European performances so much, that we are obliged to own they excel us in these performances.

fcorted them *. The civility with which I received them, and to which they had not been used with the Chinese, made them have a desire of being more acquainted with me. For they came again on the 22d, before my house, but the guard at the gate resuled them entrance.

March.

During this month, we continued our trade, as much as the mandarins and foldiers of our guard would permit. There passed

* The Chinese being accustomed to treat the inhabitants of Korea with great roughness, and having prohibited them all correspondence with foreign nations, it is not to be expected that they should relax their hard treatment of them for the sake of a minister of the court of Russia; which is, as it were, the only power who could support the inhabitants of Korea, if they should ever be desirous of throwing off the Chinese Yoke; seeing that, by the river Amoor, the Russias could fall down into the ports of Korea, without a possibility of the Chinese hindering them. And it is not impossible but this conduct of Mr De Lange might have been one cause of the court of China's sudden resolution of ordering him to leave the country.

passed nothing else remarkable, unless that the commissary having sent a clerk of the caravan towards the deferts to fee in what condition the horses were, which were lest there in their way to Pekin; he reported to us, that they were all in very bad plight; and that, if we did not out of hand send money, that they might be put into stables, there was danger of the greatest part of them dying.

The 6th of this month, I sent my interpreter, at the defire of the commissary, to the mandarins which were placed at our house on account of the caravan, and let them know, that the commissary being obliged to send one of his people with money towards the defert, in order that the people who had the charge of the horses of the caravan should be enabled to put them into stables, he would, for the greater security, have occasion for some soldiers, or fome others, to efcort this man; and I pray-Vol. II.

 Z_z

ed

ed their care of this affair. Whereupon they returned me answer, that they would make their report to the council; for, without their orders, they could do nothing in it.

The 7th, two mandarins, accompanied by a clerk, came to bring me an answer from the president on this affair; and, it being wrote on a sheet of paper, they read the same to me in the following terms:

"The allegamba having been informed yesterday that you wanted to send a mesfage again towards the deferte could not but imagine that it was for some other business than that of horses, that your people made such frequent journies between the deserts and Pekin; this gives him reason to think that, by the help of the Mongalls, you carry on a secret intelligence between this city and Selinginsky, · which may give birth to complaints and threats between the two empires; for he is not ignorant that the Mongalls are a people capable of engaging in such affairs, and that

that the Russes do not grudge money on such occasions." I asked them thereupon, "Whether this answer was from the allegamba, or whether it was their own composition." Upon which they assured me, that they wrote it, word for word, the same that the allegamba gave them; and that it was for the same reason he would not consent to the sending the person, as desired.

After this explanation, I thought necesfary, for my greater security, to desire them to acquaint the allegamba on my behalf, "That the precaution he took was not right to take, unless with prisoners, or unless he had any intercepted letter to produce, by which he would convict me of having fought to embroil the two empires; that bearing, as I did, a public character, I might write as often as I pleased, without having any occasion either of the escort or the consent of the president; and the same, if I had a courier to despatch for my private affairs, as he could not prevent it without

without an open violence." I sent forthwith my interpreter to the council, with the mandarins, to know the determination of this minister. But he sent me word, that he had no defire to employ the horses and the people of the army of the Emperor his master in our service, on journies which must cause them to be at expences for which they were not furnished by their ordinary pay. Upon which I made him the proposal of being ourselves at the expence of the people for the eleget which he thould grapt us, and that we would also mount them on our own horfes, that they might have no occasion for the Emperor's; or, if that was still not satisfactory, I would only demand a passport, and would run the risk of sending one of our own people without an escort. But he continued firm in his denial, and would not allow of one or other of the expedients, contenting himself with letting me know, once for all, "That he would do nothing in it." - I learnt, at the same time, from my interpreter, themselves, on this occasion, in much the following manner: "These foreigners come here with their commerce, to encumber us every moment with a thousand petty assairs, pretending that they ought to be favoured, on all occasions, no more nor less than if they laid an obligation on us; and yet we are still to receive the first answer from them on the subject of our affairs."

The 16th, Lunderstood that, some weeks ago, the Tush-du-Chan of the Mongalls *, who

This is the name of the present Chan of the western Mongalls. This Chan was heretofore sovereign; but, since the eastern Mongalls have possessed themselves of China, he put himself under the protection of that empire, in order to be the better able to make head against the Kalmucks, with whom they are in a manner at continual war. He is a very powerful prince. His dominions, on the western side, reach to the banks of the great river Yenisey, and even from thence, on the other side of this river, towards the sources of the Ohy; and, on the other side, towards the east, they reach to the great wall. The Chan of the

who encamped at Urga had brought complaints to the court of the ill conduct of the Russ merchants who came to Urga; and that he had, at the same time, advertised the ministry, that there never had been so great a concourse of Russ and Chinese merchants at his residence, as in this year; that, thereupon his Majesty had taken a resolution to send a mandarin, with orders to the Chan to chase out all the merchants, as well Russes as Chinese, from Urga, without letting it appear that it was done by order of his Majesty, but that it should appear as the proper act of the Tush-du-Chan, as master of his own country.

The same day, a courier, who was lately arrived from Selinginsky, with despatches from the mandarin who resided there, told my interpreter, that the intendant of Selinginsky had tendered several packets of let-

ters

western Mongalls hath a great many petty Chans of this nation for his vassals, and can bring 100,000 men, or more, into the sield, all cavalry; but his soldiers fall far short of the Kalmucks soldiery. darin, in order to be forwarded to the council of the affairs of the Mongalls at Pekin; but he refused to receive them, because the intendant could not acquaint him with their contents.

May.

The 4th of this month, two mandarins of the council, accompanied with three clerks and two officers out of our guard, being come to my apartment at eleven o'clock at night, informed me, that the allegamba, being returned from court, wanted to speak with me on an affair of consequence; and, because he was employed during the day-time, from morning till night, he prayed me to give myself the trouble of coming to him, though it was late at night. I was a-bed when the message came to me; however, I made no difficulty of rifing, to comply with this minister's desire; the more, as the mandarins assured me that the business he wanted to speak with me about

was a very pressing affair. When I came to his house, I was received with remarkable civility; and the allegamba being come in person to meet me, even to the court, he led me to his apartment, and desired me to sit down by him. He then began to make excuses, that, in so long a time, he had not been able to fee me at his own house, or in other places; but that he supposed I was not ignorant that he was obliged to be every day, from morning till night, with his Majesty at Czhan-zchumnienne. Upon which I replied, that his excuse was unanswerable, and that I commiserated his being obliged to pass his time in so fatiguing a manner. After many other reciprocal compliments of this nature, he demanded of me, "If it was long fince I had any news from Selinginsky?" I answered, "That it was some time since I had any." In the end, the affair which he was about discovered itself, by little and little, when he asked me, " If I remembered that when I would lately despatch a mestenger

messenger, by Kalchanna, towards the defert, he rold me that he could not confent to it, because he apprehended that, by such means, secret correspondence might be carried on, which might bring on some misunderstanding between the two empires." t told him thereupon, "That I did remember that, and the rest of the unexpected answer he then gave me; but, not having ever been able guess whence such suspicion could arise, he would infinitely oblige me, if he would please to speak a little more intelligibly on this affair." Whereupon he replied, " We apprehend you have intelligence of our deserters, which you do not think fit to communicate to us *." Thereupon I remonstrated, " That

^{*} The Tonguses, as well as the Mongalls, and other people of Tartar extraction, who inhabit on the confines of Rusha and China, are accustomed to desert very often, by hundreds of samilies from the lands of one empire to those of the other, according as their captice or interest prompts them, which is often the subject of alternations between the two empires. In order to remedy these inconveniencies, it was agreed

com-

"That, if he would please to consider the vast distance between St Petersburgh and Pekin, he would himself judge whether it was possible for the courier despatched on this affair to be returned already, unless he could fly; that, as to the rest, he himself knew that affairs of fuch consequence were not the business of a day, and required other things to adjust them than secret correspondence." He dook his head at this answer, because there was then a report current at Pekin, that orders were arrived at Selinginsky, from the Czar, not to restore the deserters before spoken of. Some moments afterwards he asked me, "If I would

in the last treaty, that, for the future, such deserters should not be received by either power, but should honestly be returned to the place from whence they came. From this article the Chinese pretend a right to reproach the Russes with not acting candidly in deserring so long the restitution of 700 samilies of their subjects, which went over to the Russian territories since the conclusion of this treaty; and the Russes, on their side, also reclaim a good number of samilies, and insist on its being equitable to come to a liquidation of their reciprocal pretentions.

communicate to him the news when I should receive my letters?" Upon which I affured him, "That I should conceal nothing from him, whether it regarded him in particular, or regarded the court; seeing such affairs could not be communicated to me but by express orders of the Czar my master; which, whatever desire I might have, I dared not keep secret." This minister, not thinking he had yet sufficient reason to be satisfied, demanded anew of me," "If, when I should receive private letters, I would let him have a copy?" I answered. thereupon, " That it was certainly the first time, fince the world began, such a proposal was made; but that I could not believe that he spoke in carnest on this occasion, although it was a little too late for raillery." This answer being not altogether such as he hoped for, he changed, for some time, the discourse, by saying, "That he had an intention of telling his Majesty, that the caravan was almost ready to depart, and of receiving, at the fame time, his orders with

regard to my person." Whereupon I defired him, " To put his Majesty in mind of the affair, on the subject of which I had so often made instances to him." At length he began to talk to me of my stay at Pekin, faying, "That the term which was agreed with Mr De Ismayloff, for my stay at this court, wanted little of being expired." And he made me fully to comprehend that I ought to prepare to return with the caravan. Upon which we disputed together long enough; and I told him on this occasion, "That, if he would please to remember that I affifted on all the conferences that were held on this subject; that I had read, and had in my custody, all the correspondence of Mr De Ismayloss, with the council, about his negotiations; and that I was at all the audiences which his Majesty had granted to that minister, he could not doubt but that what was transacted by Mr De Ismayloff, from his arrival till his departure, was as well known to me as to himself." I further allødged

alledged to him, on this subject, the resolution of the month of February 1721, which he himself sent to Mr De Ismayloss; wherein it was faid, "That his Majesty had given his consent to the residence of an agent at his court, without any mention regarding the time, directly or indirectly." But this Lord, notwithstanding he had nothing to answer to what I advanced, held himself strictly to his first decision, that my stay had been agreed to only till the return of the present caravan. And this altercation did not cease till I gave him, for a final answer, " That the Czar, my master, not having ordered me to enter this empire in spite of the court, or to continue to refide in it contrary to the good pleafure of the Bogdoi-Chan, I was obliged to conform myself, on this occasion, to all that his Majesly should think fit to determine in regard to me." After which he showed me a small letter, with an address in the Rufs language, faying it came from Naniti Tursoff, interpreter at Selinginsky,

he

and that the Kutuchtu * had sent it to Pekin, that it might be delivered to me. He added, "That he knew very well, that, fince the departure of Mr De Ismayloss, I had received a good number of letters, the contents of which I had communicated to nobody; but, as to this letter, I must determine to open it in his presence, and let him take a copy of it, if I wished to have it; for, if he could not prevail so far upon me, I should not read it neither, as he would take care to return it whence it came." He gave orders for this purpose to two translators, who were then present, to set themselves by me, and to read the letter at the same time I did. As I had not yet opened the letter, I asked him, "What occasioned a curiofity so unallowable? and if

^{*}The Kutuchtu is an high-priest belonging to the Mongalls and the northern Kalmucks. He was formerly no more than a sub-delegate of the Delay-Lama, in these parts; but he hath, by degrees, found means to withdraw from the obedience of his master, and to deify himself at the expence of the Delay Lama.

which

he did not know that this procedure was directly contrary to the rights of nations?" His answer was, "That he was well enough apprifed, that what he did on this occasion was a little irregular; but this letter happening to fall into his hands, he expected that I would not make much difficulty of communicating the contents to him; and that I might determine on the alternative he had proposed." Thereupon I delivered him the letter, sealed as it was, and defired him to reflect feriously on the consequence such an unwarrantable curiofity might produce; and, in the mean time, I should see to what lengths he would carry his authority over my letters. After which, I left him, and retired to my quarters.

The 5th, two mandarins came to me, on his part, to see "If I would not resolve to comply with his will in regard to the said letter?" I charged them to tell him, on my part, "That I always found myself ready to do him all imaginable service

which he could in honour expect; but what he defired on this occasion was so unreasonable, that I could not but consider it as an affront which he had an intention wantonly to give me, and that he might depend on being obliged, at a proper time, to give me satisfaction."

The 6th, the two translators above mentioned were commanded to Czchan-zchumnienne, by order of sminister, which made me think they had proceeded as far as to open my letter; but I was soon convinced of the contrary; for

The 7th, a mandarin, accompanied by a elerk, came to bring me the faid letter, which had not the least mark of having been opened. He, at the same time, made me a compliment from the allegamba, faying, " That he defired I would conceive no ill opinion of him, upon what had passed between us on the subject of this letter; in as much as he affured me there was nothing ferious on his fide in this adventure; and that he only took the liberty of having a little

little pleasantry with me; not altogether without flattering himself, that I might not be averse to comply with his desire on this occasion. But now, being convinced that I was firmly resolved against this fort of complaisance, to any person whatsoever, he would no longer delay fending me the letter in question; and, at the same time, to affure me of his friendship." After having received the letter, I let him know, in answer, "The had myself, in the beginning, looked on this affair as a jest; but, finding he pushed it too far, I had been obliged to regard it in another light; feeing I had never looked on the talking in fuch a manner to be jesting. Nevertheless, that, after the politive affurances that the allegamba gave me, that there was nothing serious on his part of this affair, I ought to consider it in the same light; desiring him, in time to come, to make use of other persons, not of me, for his diversion."

After which, having opened the letter, I found indeed that it was from the faid Vol. II.

3 B

Turfoff,

Tursoff, dated Urga, 20th of April 1722. And, as the mandarin and clerk, who brought the letter, were still in my chamber, when I began to read it, I made my interpreter translate it to them by word of mouth, in the Mongall language, to the end that they might communicate the contents to the allegamba, and know of him if he would grant me a conference on the subject of this affair would rather receive from me a men l'hereupon.

The 8th, the same mandarin came to my house, and upon my desiring to know if He had acquitted himself of the commission I gave him the day before, to the allegamba, he answered in the affirmative, and that he was ordered to bring me his answer, which was, "That the Bogdoi-Chan would hear nothing for the future talked of any commerce of the Russes, in his empire, until all the disturbances on the frontiers were entirely adjusted; and as, for this reason, there might continue a long space of time before any caravan might come again

to Pekin, the Bogdoi-Chan found it proper that the agent should return with the prefent caravan; and when the commerce between the two empires should come to be renewed, he should likewise be permitted to return to Pekin." Whereupon I made answer to the allegamba, "That the orders I received from the Czar, were, as he himfelf well knew, to remain at Pekin till he should recal me, but, as I was in no condition to oppose the rders of the Bogdoi-Chan, I was obliged to have patience, and to resolve to do what I had no power to avoid doing; nevertheless, that this was no answer to what I desired to know from him, and that I waited for it with impatience, as I did for a clear explanation upon this precipitate manner of breaking off all commerce and correspondence between the two empires, with waiting for a resolution upon the affairs of the frontiers, and without any declaration of war, or other previous mark of hostility on either side." But the mandarin declined to charge himfelf with such a message, he not thinking it proper for him to repeat such terms as it was couched in to the allegamba, saying, I must either seek an opportunity to tell him myself, or demand a conserence, for that purpose, by my interpreter.

The same day, in the afternoon, I sent my interpreter to the council, to acquaint the allegamba, by means of the mandarins he might find there, that I had, the same day, received the orders of the Bogdoi-Chan for my return to Russia; but I had received no answer on his part, upon the affair which was the subject I wanted to confer with him upon; for which reason, if he could not spare time to speak with me himself, he would at least let me know whether he would receive a memorial, on that subject, from me or not.

The 9th, another mandarin came to me, and acquainted me, that the allegamba had been informed of the subject, concerning which I had sent my interpreter to the council the day before; and, as he had not

a moment to spare to confer personally with me, he had sent this same mandarin to me, to whom I might explain myself on what I had to say to him, as the allegamba had given him orders to make him a faithful report of every thing which I should charge him with. Upon which I told him, that I wished he would inform the allegamba that I prayed him to give me, under his hand, a precise answer to the points following, viz.

- I. "If the Begooi-Chan was disposed, before my departure, to receive and to answer the credentials which I was charged with from his Czarish Majesty?
- II. If any suitable satisfaction was to be expected for the injuries done to his Czarish Majesty's subjects by the Tush-du-Chan, or at least by his orders?
- III. What was the reason that they would not grant a free passage to the letters, addressed to the council and to me, which remained on the frontiers?
- IV. In case the Bogdoi-Chan should perfist in the resolution of sending me home, what

what I should say to the Czar, my master, regarding the perpetual peace between the two empires?

V. Supposing that, contrary to expectation, my departure might be deferred, I defired to know, if, in conformity to the treaties of peace, the Bogdoi-Chan would grant me post-horses for my journey, or whether I must find them myself?"

The 10th, there came to me a mandarin, from the allegamba, to inform me, "That there was no likelihood that the Bogdoi-Chan would alter his resolution with regard to my departure; that no person had the boldness to speak again to his Majesty, after he had once explained himself so positively on this affair. But that the allegamba, in his turn, wished to be informed why I demanded so precisely to know the motives of my being fent away; and why I infifted so strenuously to have a clear explanation of the intentions of the Bogdoi-Chan towards the Czar; that he did not know whether I durst make such demands,

in case the Bogdoi-Chan should be pleased to speak personally to me, without my being afraid that he would make complaints of it to the Czar my master." Upon which I returned him as follows, viz. " That it was absolutely necessary for me to be fully informed of what I defired to know; that, without this being cleared up, I could not well resolve to depart, seeing it appeared evidently, that, fince the departure of Mr De Isinayloff, the court had intirely changed its disposition regarding the preservation of the good understanding between the two empires; that the allegamba himself could not be ignorant how many of his Czarish Majesty's subjects had, immediately after the conclusion of the last treaty of peace, deferted, and come to fettle on the lands in the dominions of the Bogdoi-Chan, without the Czar's having shown any resentment to this time, notwithstanding the same was directly contrary to the sense of the treaty; that the Czar, on this occasion, far from forbidding the subjects of China entrance

entrance into his dominions, had always permitted them, without interruption, to enjoy, in his dominions, an entire liberty, as well in regard to trade as all other affairs which could concern them, not even excepting some of those very deserters, who, having affairs to transact at some places in the Czar's dominions, had been no less welcome than the others, subjects of the Bogdoi-Chan; but now, that 700 of the fubjects of China had passed the frontiers, and would establish themselves on the lands belonging to Russia, that would forthwith forbid all commerce, not receive any more letters, and in fine, at one stroke, break off all communication between the two empires; and that without even waiting the answer of the governour-general of Siberia to the letter wrote to him on the subject; which was the only certain means of knowing whether his Czarish Majesty intended to retain these people, or to make them return. That, to conclude, I prayed the allegamba to confider, if it was not much more easy to ac-

commodate

commodate this affair by treating of it with more mildness, than to push it with an haughtiness not to be born with *"

Whereupon the mandarin told me, he could not positively undertake for his daring to say all this to the allegamba; but that, if a proper occasion offered, he would not fail of doing it faithfully. He told me further, on the part of that minister, that the mandarins, who had been sent last

Peror, either from jealously, or the artifices of some secret enemies, was so altered, with regard to the Russia trade, a little before his death, that there was no other way of adjusting it but the having recourse to arms; which was fully resolved on, on the part of Russia, when the news of the death of this monarch arrived there, which suspended the execution of this design, till they should see clearly into the designs of his successor. But the death of Peter the Great entirely broke these measures; so that the affairs between Russia and China are still, at this time, on the same terms they were on the departure of Mr De Lange from Pekin; and, since the last caravan that lest Pekin with him, no caravan hath been sent from Siberia to Pekin.

doi...

year by command of the Bogdoi-Chan, to pass the frontiers of Russia, were returned, they not being permitted to proceed on their journey, before the governour-general of Siberia was made acquainted with it; that the allegamba might expect to wait long enough for an answer, as well upon this affair as upon all other affairs which regarded the interest of the two empires, so long as they did not allow of a free passage to the letters written concerning them to the court. I received no more in answer then.

In the mean time, I had made a demand fome time ago of the council for a free pailinge for the caravan by the old road of Kerlinde, (which the former caravans had been used to take), to save them the inconveniencies attending the route by the deferts, where the people and the cattle had much to endure for want of water; and, for this purpose, I sent my interpreter, with a clerk of the caravan, on the 14th, to the council, to know if the Bog-

But they told him for answer, "That they expected to have been freed from their importuning the council about their beggarly commerce, after they had been told so often, that the council would not embarrass themselves any more about affairs that were only beneficial to the Russes, and that of course they had only to return by the way they came."

The same day, I sent to the house of the sirst minister, to know if I could have the honour of seeing him. But he excused himself, saying, that, being far advanced in years, he wanted to be at ease.

Nevertheless I did not refrain going myfelf the next day, which was the 15th, to
his house; and the guard at the gate suffering me to pass without interruption, I
entered directly into the court-yard, and
acquainted him with my being there, by
one of his servants, desiring he would afford me a quarter of an hour's audience:
But he sent me word, "That he was not

at leffure to see me, and that, as the affairs about which I would speak to him very probably only regarded the council of for reign assairs, he desired I would address myself to them." I thereupon let him know, by the same domestic, " That I was come to speak with him, as the first minister of the Bogdoi-Chan; and if I had not had a very prelling occasion of applying to him, he might be sure I would have been very averse to have come to give him trouble; but that as it concerned us equally, both him and myself, that I should have the honour of feeing him, therefore I was determined not to leave his house without speaking with him." Upon this so precise a declaration, the same domestic returned, a few moments after, and showed me into a grand faloon, well enough furnished after the Chinete manner, where the master of the houshold of this minister came to present me tea and milk, till his master should come. After I had waited about a quarter of an hour in this apartment, the alleg**a**da

allegada at length came, and defired my excuse, with a number of compliments, after the Chinese manner, that he was not always able to fee me when I might require it, because his great age, and multiplicity of affairs with which he was charged, did not permit him. Whereupon, we being both seated, I told him, "That if the affairs which I had to represent to him, regarded only my own person, I should not have ventured to incommode him; but asthey regarded our common masters, and the prefervation of a good understanding between the two empires; or, to fay all in two words, peace or war between the two nations, I thought it my duty to leek before my departure, by every way, possible, an opportunity of explaining myfelf thereupon with him; that he knew that the free passage of the caravans of Siberia was made, in some degree, an essential point in all the treaties between the two empires; that he knew, moreover, that Mr De Ifmayloff had declared, more than once, that

his Czarish Majesty could never allow that they should any more cavil on that article; that he further knew, that the free trade of the subjects of Russia, at Urga, was positively stipulated by the late treaty, in which they could not make the least alteration, without a manifest violation of the faid treaty; that he knew in fine that it was with the agreement of the Bogdoi-Chan, and by virtue of a resolution of the council, in writing, that I remained at Pekin, after the departure of Mr De Ismayloff, in quality of agent, impowered by the Court of Russia, till such time as his Czarish Majesty should be pleased to recal me. Notwithstanding which, not regarding such folemn engagements, they had, in regard to this last caravan, treated us so ill, that, if they had been at open war with Russia, they could not have done worse; that they had kept thut up, during many months, the commissary of the caravan, with all his people, just as if they had been slaves; that there was no kind of infult to which they

they did not expose those who had a desire to come and trade with our people. And yet more, they had caused the Russ subjects to be shamefully driven out of Urga, who had come to trade there on the faith of public treaties. And, as to what regards myself, they had made me suffer more affronts, on all occasions that offered, than can be imagined; in the end, not yet satisfied with all those steps, the president of the council had made it be declared to. me positively, that there should not absolutely, for the future, any caravan be admitted before the affair of the frontiers should be regulated to the satisfaction of, the Bogdoi-Chan; and, at the same time, caused it to be signified to me, that I must prepare to depart with the caravan, because his Majesty would not suffer me to remain any longer at his court, in the uncertainty that affairs stood in between the two empires. That, if this order regarded me only as a private person, there would be nothing in it which did not depend entirely.

on the pleasure of the Bogdoi-Chan; but having been once admitted by him to refide at his court, in quality of agent of his Czarish Majesty, it was a maxim, practised by all the civilized nations in the world, not to fend away, in a manner so indecent, a person vested with a public character, unless entirely to break off all good understanding with his master. That, if they defired very ardently, as they afferted on all occasions, the restitution of the deserters Cin question, and an amicable convention in regard to the frontiers, he would permit me to tell him, that it appeared to me the y took quite the wrong way to obtain them 3 and that the fending me away, so far from facilitating those assairs, was most certainly the greatest obstacle they could think of. That I thought it my duty to remonstrate the foregoing matters at this time that they might still be remedied; because, after my departure, I did not well see how it would be possible to get out of this embarrassment by amicable means." The minister there-

upon answered me, " That it being already . fo long atime fince the Russes had given them the expectation of regulating the affairs of the frontiers, conform to the treaties concluded between the two empires, without their taking the least thought of bringing things to a close, his Majesty had come to a resolution not to admit any caravan before he should be fully fatisfied, on the part of Russia, of their adherence to treaties; and as thereby my residence at his court became quite unnecessary, his Majesty saw nothing that should oblige him to keep me longer in his empire. That, in regard to what passed at Urga, the Tushdu-Chan had good reasons for removing our people from his residence, who had committed great insolencies, noways conform to treaties. That, as to what regarded the ill usage which I pretended the caravan had suffered, he did not well know of what I spoke; but, as to their being kept shut up a longer time than ordinary, it was our own, fault, who would have

made innovations in the trade of the caravans. In fine, in one word, that his Majesty was tired of receiving the law, in his own country, from foreigners, of whom his subjects reaped no profit; and that, if the court of Russia delayed longer doing him justice, he should be obliged to do it himself, by such ways as he should find. most convenient." Upon which I replied, "That I was much furprised to find the Bogdoi-Chan in a disposition so little favourable towards his Czarish Majesty, after he had the goodness to testify himself, on more than one occasion, to Mr De Ismayloff, that he desired nothing more than always to live in a good understanding with the Czar, my master; and that I could not conceive what caused his change of sentiments fo suddenly, with regard to his Czarish Majesty. That if the court of China had restitutions to demand from us, we had the like to expect from them; and that, in any shape, there was no reason that could in justice oblige us to restore their

their deferters, fo long as they retained That if the indulgence of the Czar, my master, in the affair of Albazin *, had raifed rash hopes in any persons, who are ill informed of the forces of Rullia, and of the monarch who reigns over them, I was perfuaded, that, a monarch fo enlightened, as was the Bogdoi-Chan, would not fuffer himfelf to be blinded by fuch delutive appearances; and that he knew full well how to diffinguish an indulgence, arising from magnanimity and esteem, for a prince, his friend and allay, from a forced compliance, grounded on weakness and indolence. That as I had, in my instructions, orders to apply my atmost endeavours for the prefervation of the good understanding between the two empires, I thought I might tell

^{*} Albazin was a little town of about 500 or 600 houses, which the Russes had built in a very sertile country, upon the south side of the river Amoor, near the mouth of the river Albazin. But at the end of the year 1715, the Eastern Mongalls, supported by the Chinese, besieged it, and having carried it after a siege two years, rased it to the ground.

tell him, that I was exceedingly furprised at the proceedings of the Chinese ministry on this occasion; that he could not be ignorant that it depended only on his Czarish Majesty to finish the war with Sweden, in the most honourable manner; and that perhaps this peace was actually made at the time I was speaking to him; after which, I saw nothing that could prevent the Czar, my master, from turning his arms to this fide, in case they exercised his patience too much. That I gave him my word, that all the great difficulties which perhaps might be imagined in China to attend such an enterprise, would vanish immediately, if ever his Czarish Majesty flould refolve on transporting himself to the frontiers; for he was a prince that did not susser himself to be hindered by difficulties, and that they might then have fufin ficient cause to repent their having despised the friendship of a monarch who was not accustomed to receive offences with impunity, and who was inferior to no monarch

in the world, neither in grandeur nor · power." This discourse was not at all to the allegada's taste; therefore, after some filence, he demanded of me, "If I was authorised to talk to him in the manner I did? and if I was not apprehensive of being disavowed by the court of Russia, in case they should make complaint upon the menaces I used to them?" I thereupon replied to him, "That, in the state to which I saw affairs were brought, I thought it necessary not to disguise any thing to him, to the end that the Bogdoi-Chan, faithfully informed by him, of all he had to consider for and against this affair, might thereby be the better enabled to determine with himself thereupon, in a manner fuitable to his great wildom and juftice. That nevertheless it was wrong to take what I had faid on this occasion for menaces, seeing they were only mere reflections, which I was desirous he should make on the unhappy confequences which the disdainful conduct they showed, in regard to us, might in time produce; and that I was so little apprehensive of being disavowed by the court of Russia, that I was ready to give him in writing every word I had faid to him, and that it would be the greatest service he could render me. to speak out of hand concerning it to the Bogdoi-Chan, the more as I was well affured, that if they would give the least atrention to the irregular manner in which they had acted in this affair, with a friendly and allied power, they would not fail of comprehending that my intentions were fincere, and only had for its aim the prefervation of the harmony between the two empires." The answer of the minister to this was, "That it being his Majesty's custom never to make any resolution, without first well weighing all circumstances, he never changed his measures for any reafon whatfoever; and, after what he had declared politively, in regard to the caravan and my person, he had no inclination to propose to him a change of sentiment

in this regard. That we had nothing to do but to make a beginning in complying with our engagements; after which they would fee what they had to do as to the rest." Upon which I concluded, by telling him, "That the case being so, I saw plainly, that it was in vain, on our fide, to use more endeavours for preserving the good understanding between the two empires, as long as they would contribute nothing towards it on their side; that, therefore, the game must go on, seeing the dice was thrown already. That, however, I had at least the satisfaction of having done my duty in advertising him, as first minister of the Bogdoi-Chan, of the unhappy confequences which would enfue from all this; and that was the fole reason which made me think it absolutely neces-. fary for me to give him the trouble of this visit." After which, I rose up, and took leave of him. On parting, he re-conducted me to the entrance of the faloon, where he staid till I was mounted on horseback.

milies,

The same day I was likewise to take leave of the poyamba, or great marshal of the court; and, after having returned him thanks, which were truly due to him, for all the goodness which he had showed to me ever since I had the honour of being. known to him. I profited myself of the present opportunity to represent succinctly to him the same things which I had reprefented to the alegada. He thereupon assured me, " That he was forry to see that the fuccess of my negotiations did not aniwer my wishes. That it was true that the Bogdoi-Chan was very much piqued that he faw there was no end made to the affair of the deferters; and that he had certain advice that our court had no desire to fatify him on this article, and that we only fought to protract time: That it was on these considerations that he had been prevailed on by the ministry to order my return. That, for his part, he was aftonished to see that our court could hesitate a moment to facrifice some hundreds of fa-

milies, who were in the utmost poverty, to the folid advantages which we might promise ourselves from the friendship which the Bogdoi-Chan had conceived for the person of the Czar my master; and he made no manner of doubt, but that, if the Czar had been well informed of the justice of the pretentions of the court of China, and the little importance of that affair, he would inflantly have given orders for restoring the families reclaimed." I would have had him confider the distance of the places, and that it was in a manner impossible that an answer could have arrived from St Petersburgh on this assair, since the departure of Mr De Ismayloss. But he stopped my mouth by telling me, " That he could not fay precisely what the distance was, but he knew very well that, on other occasions, our couriers had made the journey in much less time. That he advised me to do my best in this affair when I should arrive on the frontiers, and that he could assure me, that, when the Bogdoi-Vol. II. Chan

Chan was made easy on this point, he would explain himself very reasonably on all the rest of what we should wish to have done; that, however, as to myself, I had cause to be well fatisfied with the sentiments the court entertained of me, and that his Majesty had himself declared, that, in case affairs should come to be accommodated, the would not be forry to see me return to Pekin."

The 16th, I went to pay my court to the Bogdoi-Chan, upon his departure from Pekin to pass the summer at Jegcholl, but had not the honour of speaking to him at this time; his Majesty letting me know, by the master of the ceremonies, "That he recommended the same thing to me which he had charged Mr De Ismayloss with, to tell his Czarish Majesty." That, for the rest,

^{*} When Mr De Ismayloss had his audience of leave of the late Emperor of China, this monarch declared expressly that he would permit Mr De Lange to remain at Pekin in quality of agent of the court of Russia, expecting

rest, he wished me a good jonrney; and expected that I would not fail to write from the frontiers, in case I should there be informed of any news from Europe."

A little before I received the message from his Majesty, I had an interview with the allegamba, who, after an infinite deal of caressing and slattery, begged of me to labour, as much as possible, to sorward the returning their deserters; at the same time adding, "That the Bogdoi-Chan had great reliance on me in regard to this assair; in expectation that, according to all appearances, I would not be backward to return soon to China, either on the subject in question,

or

pecling that Mr De Ismayloss would, on his return, prevail with his Czarsh Majesty to send back the deferted samilies in question; but, in case that should not be effected instantly, he would not only send away the said agent, but would receive no more caravans, till he should be entirely satisfied on this article. But Mr De Ismayloss, on his arrival at Mosco, sound the court so busily employed about the expedition to Persisa, that he found no opportunity of getting a final resolution on this affair.

or on the subject of commerce." I assured him thereupon, " That his Czarish Majefty, having subjects in abundance, had at no time the least temptation to keep the vastals of neighbouring powers unjustly." And I promised, at the same time, to write to him, if, at my arrival on the frontiers, I should learn that any resolution was taken on this affair. Afterwards I demanded of him, " For what reason they resused conveyance of the letters which were on the frontiers?" At the same time, I led him to imagine some appearance that those letters bore fomething relating to their affair. Whereupon he answered me, "That, if it was possible to believe it to be so, he would not make the least difficulty of instantly ordering the letters to be brought hither; but that, if they contained orders for the rendering back their deferters, they would not have failed to communicate the same to the mandarin, who kept himself at Selinginsky purely on that affair."

At length, not seeing any appearance of being able to prolong my stay at Pekin till

the recal of his Czarish Majesty, I pressed the commissary to neglect nothing that might facilitate his departure as soon as possible; and thereupon he despatched beforehand.

On the 25th, a part of his baggage for Krasnagora, which is a place, a day's journey without the great wall, appointed for the rendezvous of all the caravan. On this occasion, they did not give a guard of Chinese soldiers to the caravan, as had been formerly practised; but they had ordered all the towns where they should stop to give them guards; besides which, there was a bonska or courier of the council of the affairs of the Mongalls ordered to attend the baggage, who was not to leave them without a new order.

June.

and

The 6th, a mandarin, named Tulishin, let me know that, having received orders from the Bogdoi-Chan to accompany me to Selinginsky, and to furnish provisions

and post-horses on the road, he would be glad to be informed when I thought I should be ready to depart, that he might take his measures accordingly, and despatch, in good time, the couriers necessary for the deserts, to make the requisite dispositions for my passage.

The 8th the commissary went to the council, to demand a guard for the caravan; but they granted none; acquainting him, at the same time, that the Mandarin Tulishin was also charged with the care of the caravan; and that, as he would be obliged frequently to leave the route of the caravan, for providing victuals and horses which I should have occasion for on my journey, he was to have with him a clerk and two couriers under his command, who were not to leave the caravan before they should safely arrive at Selinginsky.

The same day, 36 carriages were despatched, laden with merchandise, for the place of rendezvous, without any other escort escort than some of our own people, and a courier of the coupeil.

The 16th, the allegamba invited me to come to him at the palace of the Bogdoi-Chan; and, when I arrived, he presented me with two pieces of damask on the part of the Chan; telling me, " That his Majesty having received presents from me on the entrance of the new year, he was pleased, in his turn, to make me a present of these two pieces of damask." I received this present with all due respect; assuring this minister that I should eternally cherish the remembrance of all the gracious favours which the Bogdoi-Chan had deigned to honour me with during my residence in his empire; and that, in whatever place I should be in time to come, I would never fail of making it a subject of particular glory to me.

July.

The 4th, the allegamba sent a mandarin to me, to show me a letter, which he had

very lately received from the mandarin who refided at Selinginsky, in which he made heavy complaints of the chicaneries that he was forced to bear with, during his residence in that place, as well from the officers of his Czarish Majesty, as the other inhabitants of that city; adding, " That every body demanded of him perpetually the reason why he tarried there so long, and if he did not intend foon to return home? That thereupon, having demanded of them, if they had come to any resolution on the affair which was the cause of his being there, they had answered him, that they had no other orders but to conduct him back, with all civility, when he should think proper to return." He related, besides, in this letter, "That the allowance they gave him, for the subsistence of himself and retinue was so very scanty, that, if he had not had of his own money wherewithal to supply himself, he should have been reduced to great extremities. They had, besides, pressed him very hard

111

on the subject of the letters, for the council and for me, that were arrived on the frontiers; and they would, by force, know of him the reason why he refused to receive the letters, and to forward them to Pekin; but that he had always answered them, that, his sole errand to Selinginsky being on the affair of the deserters, he could not charge himself, either with letters, or any other affair whatsoever." After the mandarin had explained to me the contents of this letter, he told me, that the allegamba demanded to know of me, " Whether it was possible that all this could be done by order of his Czarish Majesty?" I let him know, in answer, " That, if he had formed ideas of the person of the Czar my master, by those passages, he would do well entirely to efface them; for that, as his Czarish Majesty was more magnanimous than to treat, in the manner there laid down, even prisoners of war in his dominions, he would certainly not begin so bad a practice with the subjects of an empire Vol. II.

in amity with him, who came into his country." I added, that, notwithstanding I had reason to complain of things of more consequence than this mandarin, I was nevertheless so far from approving the want of complaisance used towards him, that, if the allegamba thought fit to give me a copy of that letter, I was ready to take charge of it, and to make it my business that the Czar my master should be acquainted with it. But, with regard to the orders which this mandarin hinted he was charged with, not to receive any letters, though even for the council itself, before he should receive the deserters in question, I could not help observing that such a procedure bespoke much coolness on their side.

The 8th, the allegamba fent to me, in the evening, a mandarin, who told me, after making me a compliment from him, that he would be the next day at the council; and that, if I had time to come there likewife, he would explain the reasons which determined the court to resolve on

my return; and that he would give me the fame in writing. Upon which I told him, I should come there with great pleasure, that I might be informed of them.

The 9th, having notice that the allegamba was already arrived at the council, I forthwith mounted on horseback to go there also. He came in person to receive me at the door, and désired me to place myself at a little table with him. After which he gave me to understand, " That it were to be wished that my residence at that court might continue longer, as the Bogdoi-Chan himself, and all the ministry in general, were so well fatisfied with the conduct I had observed during my residence, that they had nothing to fay against my person; that they had remarked, with much fatisfaction, that, by the good order I had kept, the present caravan had begun and finished its commerce, without producing the least dispute between the merchants of the two nations *. It had also formerly

The Chinese usually bought, from the caravan, goods

been too usual to see the servants and people of the caravan do numberless insolencies in the streets, and commit all sorts of excesses; but that, for this time, they could not without surprise observe that nothing of this sort had appeared; but that every thing passed with all desirable decency *."

After

goods on credit, for which, at the time when due, they could not pay; which occasioned very frequent disputes between the two nations. To remedy this, the court of Pekin had been accustomed to put into the hands of the commissary, at his departure, all those who could not pay what they were indebted to the caravan, in order that he might compel them to pay as they best could. In which cases, the commissaries had frequently committed great abuses, and treated the poor Chinese, whom they had in their custody, in the most barbarous manner; which very much disgusted the people of Pekin, and rendered them very averse to trading with the Russian caravans.

* The excesses committed by those of the caravan, had been but too frequent till this time; and the commissaries, in place of redressing those disorders, had been very often themselves the authors of them, without giving themselves the trouble of making the least satisfaction for them to the Chinese, notwithstanding

After I had paid this compliment by a-. nother, I told him, " That it was with intention of maintaining the like good order that his Czarish Majesty sent me to China; and that it would be owing to themselves, if things, for the future, should not be carried on in the same order, and if any other petty incidents did not come to an accommodation with the like ease." After which, I prayed him to let me know the true source of the disorders which happened at Urga, between the subjects of the Czar, my master, and the Mongalls; and " wherefore they obliged the Russia-merchants to leave that place before they had finished their trade." He answered me thereupon, " That it was done by orders of the Tush-du-Chan and his council, as fupreme

the great complaints to the Russian ministers thereupon on many occasions. In all appearance, what contributed principally to the good order observed by the Russiervants of this caravan, was their not getting brandy at free cost, as they did when the Chinese surnished the subsistence for the caravan,

^{*} Though the Chan of the Western Mongalls is tributary to the Chinese, they have nevertheless a great regard for him at the court of China; the more as he is a very powerful Prince; and that, in case of a revolt in China, it is from him that the present Imperial House is to expect the greatest assistance; his subjects being beyond comparison much better soldiers than the Mongall Chinese; insomuch, that if they should be disabliged, and should join themselves to the Kalmucks, or to the Russes, nothing could prevent his entrance into China when he pleased, and probably bring about another revolution.

1722. MR DE LANGE. 415

the court at Pekin, on the subject of satisfaction'we had to demand on that affair? or were to take it of the Tush-du-Chan? as it was not to be expected that affair would be let pass without an exact inquiry. That, for my part, I thought the best means of terminating that affair amicably, was, that they should order the mandarin, who was to accompany me on the journey, to go with me to Urga, in our way to Selinginsky; to the end, that, after having full information of this affair, I might be able to send a circumstantial account of it to our ministry." 'But he answered me thereupon in these terms; "With us no judge, who hath given a just sentence, can be made responsible for his judgment, was he no more than a mere clerk. Your peoplé who were at Urga have affronted the lamas, as well by words as deeds; and they have, moreover, attempted to carry off some Mongall families from those quarters. It is for this reason that the Tush-du-Chan was in the right to remove them from his territories."

I answered him thereupon, "That this judge ought most certainly to render ac- . count of his judgment, because he had judged people who were no manner of way under his jurisdiction. But he would have acted with justice if, after having sent the culpable to Selinginsky, he had prosecuted for satisfaction at that place. Whereas, now that he hath punished the innocent equally with the guilty, and hath infringed the treaty of peace in so essential an article, his judgment cannot be regarded but as a manifest act of violence." The allegamba, finding me infift to strenuously for an inquiry into this affair, finiling, told me, " Mr agent, you do well to make so much work about this affair; but I do not know how to explain myself more precisely upon it at present; all that I can say to you is, that all of it will be eafily accommodated when we shall receive a satisfactory answer upon the affair of our deserters." After which he prefented me with a writing, which he said had been drawn up by order

of the Bogdoi-Chan, to ferve for my information regarding the reasons of my being sent away. Upon which we again entered into dispute together; but as these gentlemen, on these occasions, hold themselves strictly tied down to a fingle word, whether essential to the affair they are upon or not, it was impossible for me to draw from him any other answer, than that they had not defigned to grant my remaining at Pekin longer than the time of the prefent caravan; and that, when the affair of the frontiers should be accommodated, they would not be wanting to give a definitive refolution, as well upon this article, as upon the other propositions which Mr De Hinayloss had made to the court. He afterwards presented to me a letter, saying it was written by order of the Logdoi-Chan, to Prince Cherkafky, governour-general of Siberia *; Vol. II. 3 G but,

* The Prince Cherkasky, governour general of Siberia, was recalled by the court of Russia, in the year 1722, upon his own follicitations; and they afterwards sont thicker a person in quality of vice governous, who remains there still.

but, I having refused to receive the said letter, it displeased him a little, and made him fay, "That it was hardly civil in me to refuse a letter, which the Emperor, his master, had ordered to be written, and to be put into my hands." I answered thereupon, "That I would not chuse to do what I did on this occasion, if the letters which the said Prince Cherkasky, in quality of governour-general of Siberia, had written to the council, were not likewise written by the order of the Czar, my master. That he could give this letter to the mandarin, who was to accompany mesto Selinginsky, with orders to receive the letters for the court which were lying there; and that being done, I should not then make the least difficulty to receive the faid letter." He declared to me afterwards, that it was the pleasure of the Bogdoi-Chan that I should take Jegcholl in my way, to have my audience of leave of his Majesty. And again reluming the article of the letter from the court for the Prince Cherkasky, he told me, That

"That what I had done on this occasion was not altogether fo right; seeing it was not allowed to any person, when in China, to oppose themselves to the will of the Emperor. Upon which I answered him, "That I was perfuaded his Majesty would put a different construction on this affair, from what he did." But that I wished, in my turn, to know from him, " Upon what he grounded his suspicions, when he refused us, the last spring, the passage to the deserts for some of our people, whom we would have fent with money to provide subsistence for our horses; and that, under the pretext, that by fuch expeditions fecret correspondence might be carried on, which might produce misunderstandings between the two empires." Thereupon he faid, "That in reality he had no fuch suspicions; but that he would willingly prevent the disorders which might have happened on the journey of these people; seeing, that if they had been robbed, or affassinated on. the road, we would not have failed to de-

mand fatisfaction from the court." Thereupon I put him in mind, "That he was now brought to explain himself; that it was not to hinder fecret correspondence that he resused us passage, and that he might very well have spared himself that. uscless precaution, as to what regarded us, which had caused an expence of some thoufands of laen, for not being able to put our horses into stables, to which purpose the money we wanted to fend to the deferts was appropriated; and had occasioned the death of a great many horses; and even those that survived were in such a miferable condition, that they were by no means capable of ferving in the waggons; which obliged our commissary to transport the greatest part of his baggage to Selinginsky by carriages hired at Pekin, which could not be done but at a very confiderable charge." This answer made him a little thoughtful; but at length he replied to me, "That he did not fay fo; but, be it so or not, we must now part good friends;

to which end he prayed me to have no illwill towards him upon account of the liberty he had taken to trifle and to jest with me on the subject of the letter from Turfosf; that he could assure me he had no ill intention on that occasion; and hoped that I would be satisfied with this explanation, and not think otherwise of that affair, in time to come, than as a piece of innocent raillery." To which I answered him, "That, as to what regarded myself in particular, he might depend that I should abfolutely think no more of it; but, for the rest, I could not do in it according to my own pleasure." Whereupon he asked me, if, at my return to Russia, I should be obliged to give a relation in writing to our ministry, of every thing that passed during my residence in China, in regard to my negociations; and having answered him yes, he said to me, that, in this case, I would do well not to infert a number of trifling things, which could answer no good end, but might embroil matters more; for

table

that it was much better that a good underflanding between the two empires should continue, than that differences between them should be widened. I replied thereupon, that, not having been sent to the court of Pekin as an instrument for creating misunderstandings, I would make it my business, in my relation, not to touch upon any things but such as was necessary for our court to be informed of. After which we both rose up, and having mutually embraced, we took leave of each other, reciprocally wishing to meet soon again.

The 12th, the commissary having left Pekin, with all the rest of the caravan, I likewise departed for Jegcholl, where I arrived on the 15th; and having forthwith made known my arrival to the chamberlain of the Chan, he let me know he would instantly inform his Majesty; and, till he should receive his orders for appointing the day, of my audience, the intendant of his Majesty's kitchen would take care that my

table should be furnished with every thing I might have occasion for.

The 17th, I had my audience of leave of the Bogdoi-Chan, with the ceremonies usual at this court.

The 18th, I left Jegcholl, and met the caravan the 24th; which being still within the Great Wall, I passed it, the 26th, with the caravan, which I left, on the 28th, near Krasna-gora in the deserts. And, on the 26th of August 1722, I arrived at Selinginsky, after having resided near seventeen months at the court of China.

PERSIA,

WITH

THE ARMY OF RUSSIA

COMMANDED BY

HIS IMPERIAL MAJESTY

PETER THE FIRST,

IN THE YEAR D.DCC.XXII.

Vol. II.

3 H

SUCCINCT RELATION

OF MY

JOURNEY

TO

DERBENT.

from Pekin, as hath been formerly mentioned, I found his Imperial Majesty, all the court, the general officers, and the nobility and gentry, from all the empire, assembled at Mosco; and great preparations making, at that city, for the celebration of the festivals, appointed to be solemnized there, on account of the peace, concluded at Aland in 1721, between Russia and Swe-

den,

den, after a war which had lasted more than twenty years.

These festivals were accompanied with masquerades, grand fire-works, balls, asfemblies, &c. the detail of which, though it would fwell this work to too large a bulk, yet I think it will not be unacceptable to the reader, briefly to relate one part of it, I mean the magnificent shows exhibited on this occasion; which I am induced to by the confideration, which at that time struck me, of Peter the Great his having always in view, even in his amblements, and times of diversion, all possible means of influencing his people to a liking of whatever tended to promote the good of his empire.

The Russians, in general, had a strong aversion to shipping and maritime assairs. In order to apprise them of the great advantages arising from a marine force, in his triumphant entry into Mosco, he represented to his people that the peace, the rejoicings for which were now celebrating,

was obtained by means of his naval . ftrength.

The triumphant entry was made from a village, about seven miles from Mosco, called Sefwedfky.

The first of the cavalcade was a galley, finely carved and gilt, in which the rowers plied their oars as on the water. The galley was commanded by the high admiral of Russia. Then came a frigate, of 16 finall brass guns, with three masts, completely rigged, manned with twelve or fourteen youths, habited like Dutch skippers, in black velvet, who trimmed the sails, and performed all the manoeuvres as of a ship at sea. Then came most richly decorated barges, wherein fat the Empress and the ladies of the court. There were Tailo pilot-boats, heaving the lead, and above thirty other veffels, pinnaces, wherries, &c. each filled with masqueraders in the dreffes of different nations. It was in the month of February, at which time all the ground was covered with fnow, and all

the rivers frozen. All these machines were placed on sledges, and were drawn by hortes through all the principal streets of Mosco. The ship required above forty horses to draw it. In order to its passing under the gates, the top-masts were struck, and, when passed, set up again; besides which, the gate-way was dug as low as was necessary for admitting it to pass.

Majesty prepared to undertake an expedition into Persia, at the earnest request of Shach Hussein, the Sophy of Persia, in order to assist that prince against the Assistant, his rebellious subjects, who, under the conduct, first, of Myrvais, asterwards, of Myr Mahmut, had not only seized upon the city and strong fortress Chandahar, but also had possessed themselves of several provinces on the frontiers towards India, making frequent incursions towards the capital of Ispahan. As I had formerly been at the court of Persia, I was engaged

by my friend Doctor Blumentrost, his Majesty's chief physician, to accompany him in that expedition.

Accordingly, about the beginning of May 1722, all things necessary being in readiness, the troops embarked at Mosco, on board of half gallies, built for that purpose, and fell down the river to Kolumna; near which town the Mosco river falls into the Oka, about ninety versts from the city of Mosco. Kolumna was the place of rendezvous, and where the troops waited till the arrival of his Imperial Majesty and the Empress, his consort, who accompanied him in this expedition.

May 13th, their Majesties, and all those of the court who were appointed to attend them in this expedition, set out from Mosco by land, and arrived the next day at Kolumna.

The 15th, his Majesty employed himself in reviewing the troops, in inspecting the condition of the sleet, and in giving the necessary orders. The sleet consisted of about three hundred sail of vessels, of all sorts, on board of which were about sifteen thousand regular troops, including half the guards.

The 16th, in the evening, his Majesty and the Empress, attended by a few ladies, went on board a magnificent galley, of forty oars, with all proper accommodations, built on purpose for the voyage.

The 17th, at break of day, the fignal was given, by firing three great guns from his Majesty's galley, for the fleet to get under sail. The galley led the way, and all the rest of the fleet followed in a line. His Majesty's galley carried the standard of Russia, the other vessels their ensigns displayed, with drums beating, and music playing, which altogether made an appearance, perhaps not to be equalled in any other country. In about an hour's time we came into the river Oka, where the vessels had more room to spread.

Having, in my former journey to Per-

sia, mentioned the several places from hence to Astrachan, I need not repeat them here.

I have formerly noted, that, at this season of the year, the rivers of these parts may, in some measure, be compared to the Nile; for, from the melting of the snow, they overslow all the flat grounds adjacent to a very great distance.

The 21st, some of our people going a shore, to take leave of their friends, did not return on board till late in the evening, which caused our being at some distance behind the fleet; upon which we used our best essorts to regain our station : But, in the night, our pilot falling afleep, the bark drove out of the channel of the river into a wood. I, being in the cabin, heard a great noise upon deck, not unu-'s sual on such occasions: At last I perceived the vessel to strike against something, when, coming upon deck, I was not a little furprifed to see the people climbing up trees; for the bark was jambed in between two birch-trees of very large fize. All our en-Vol. II. 3 L deavours

deavours could neither move her backwards nor forwards, until we got people from a neighbouring village, by whose afsistance we got her warped off with little damage; which being repaired, we proceeded again on our voyage.

The 25th, we came up with the fleet at the town Nishna-Novogorod, where their Majesties and all the court were most sumptuously entertained at the house of Baron Strogonoss. We staid here some days to take in provisions and other necessaries.

The 30th, being his Majesty's birth-day, the same was solemnized, in the usual manner, by siring guns, &c.

The 31st, his Majesty sailed in his galley for Cazan, escorted by some of the small gallies, leaving the rest of the sleet under the command of the Lord High Admiral Apraxin.

June 5th, we left Nishna-Novogorod, and, in fine calm weather, proceeded down the Volga.

The

The 8th, we arrived at the city of Cazan; the Emperor had left that place the preceding day.

1722.

The 9th, we again proceeded on our voyage.

The 20th, we arrived at the town of Saratoss. Nothing very material occurred by the way, in which we were sometimes detained by strong gales of southerly winds, and by calms, during which we were incommoded by infinite numbers of muskito-slies.

At this place we came up with the Emperor, who had appointed an interview with the Ayuka-Chan, King of the Kalmucks. The Chan, for that purpose, had his tents pitched on the east banks of the Volga, not far from the river.

Next day, his Majesty invited the Ayu-ka-Chan and his Queen to dinner on board the galley; which, for the accommodation of the royal guests in getting on board, was brought as near the shore as possible,

and a gallery made from the shore to the galley, for them to walk on.

The Ayuka-Chan came on horseback, attended by two of the princes his sons, and escorted by a troop of about sifty of his officers and great men, all exceedingly well mounted. About twenty yards from the shore, the King alighted from his horse, and was received by a privy-counsellor and an officer of the guards. When the Emperor saw him advancing, he went on shore, saluted him, and taking him by the hand, conducted him on board the galley, where he introduced him to the Empress, who was seated on the quarter-deck, under a very rich awning.

Soon after the Ayuka-Chan was got on board the galley, the Queen arrived on the shore, in a covered wheel-machine, attended by one of the princesses, her daughter, and two ladies, who were also escorted by a troop of horsemen. When she was alighted, the Emperor went on shore to re-

ceive her, and, conducting her on board, introduced her to the Empress.

The Ayuka-Chan is an old man, about feventy years of age, yet is hearty and chearful. He is a prince of great wisdom, and prudent conduct; is much respected by all his neighbours for his sincerity and plain dealing. And I recollect that, when I was at Pekin, the Emperor of China made very honourable mention of him. By his long experience, he is very well acquainted with the state of affairs in the east.

The Queen was about fifty years old, of a decent and chearful deportment. The ladies, her attendants, were young. The princess, in particular, hath a fine complexion; her hair a jet black, which was disposed in tresses round her shoulders; and she was, in the eyes of the Kalmucks, a complete beauty. They were all richly dressed in long robes of Persian brocade, with little round caps, on the upper part of their heads, bordered with sable-fur, according to the fashion of the country.

The Emperor intimated to the Ayuka-Chan, that he would be defirous of ten thousand of his troops to accompany him into Persia. The King of the Kalmucks replied, that ten thousand were at the Emperor's service, but that he thought one half of that number would be more than sufficient to answer all his purposes; and immediately gave orders for five thousand to march directly, and join the Emperor at Terky.

Both the Emperor and Empress were highly pleased with their guests, and, in the evening, dismissed them, with suitable presents. The Empress gave the Queen a gold repeating-watch, set with diamonds, which seemed very much to take her fancy, besides some pieces of brocade, and other silks of value.

It is well worth remarking, that this treaty between two mighty monarchs was begun, carried on, and concluded, in less space of time than is usually employed, by

the plenipotentiaries of our western European monarchs, in taking a dinner.

The 22d, we left Saratoff, and sailed down the river Volga, with a fair wind.

The 23d, in the evening, we came to the town of Kamoshinka, where we remained till the next morning.

The 28th, we came to the town of Zaritzina; and the 30th, to another town called Tzorno-yarr.

July 4th, we arrived at the city of Aftrachan. Little remarkable occurred during the voyage. We were sometimes detained by contrary winds; and, for the most part of the way, were much incommoded by muskitoes, which plagued us much in the day-time, and interrupted our rest during the night.

The 5th, the weather being excessive hot, the Emperor quitted his house in the city, and went to lodge in one of the adjacent vineyards.

The 6th, the dragoons, whom we found encamped on the west bank of the Volga,

to the number of five thousand, were ordered to march directly to Terky, there to wait the Emperor's arrival.

The 8th, the Lord High Admiral Apraxin arrived with the fleet and troops on board. The next day the troops encamped on one of the islands in the neighbourhood.

During our stay at Astrachan, nothing of moment occurred.

The 16th, all the necessary preparations being completed, the troops re-imbarked, and lay on board that night.

The 17th, the Emperor, Empress, and all the court, went on board; and, the wind being fair, sailed down the river; drums beating, and music playing. The sleet was in several divisions, under their respective chiefs; and, being joined by a number of large transports, and other vessels, made a very grand appearance, such as had never been seen before in this part of the world, nor frequently in any other.

The 18th, the wind being contrary, we made but flow progress. In the evening it fell calm; all the shoals being covered with high reeds, contributed to increase the innumerable quantity of muskitoes with which we were intollerably pestered.

The 19th, we got out of the river Volga into the Caspian Sea. The wind being contrary, the heavy transports were warped out as far as possible, to get out of the reach of those troublesome insects. At night we came to an anchor, in eight feet water, near a flat island called Tuleny-Lapata.

The 20th, we continued warping out the whole day. At night, we came to an anchor, near the four fandy hillocks called Tzateerey-Buggory.

The 21st, at break of day, the Admiral made fignal for failing; the fleet got under fail, and put out to sea, with a fair wind.

The Emperor, accompanied with the half-gallies, on board which were troops, steered to the west, close under the shore. But I being on board one of the VOL. II.

large ships, we kept the sea, and steered a direct course for Terky. It is to be observed that the Emperor and the gallies took their course to avoid being liable to be surprised with a gale of wind at sea, which might have been attended with bad consequences.

The 22d, we came into salt-water, four fathoms deep, out of light of land, and also of the gallies.

The 23d, we had calms, and cafy bree zes at north-west.

The 24th, in the evening, we came to an anchor in the road of Terky.

The 25th, the Emperor, and all the gallies arrived safe.

The 26th, the Emperor went ashore; and, having visited the town and fortifications, returned on board in the evening.

The town of Terky is a frontier strongly situated by nature, being encompassed by a deep marshy ground, having only one entrance to it, on the land-side, which is well defended by batteries. It takes its name

Terk. It is governed by a commandant, and hath a garrison of about one thousand men, of regular troops and cossacks, and is at all times well stored with ammunition and provisions. This place is of singular use for keeping the Tzercassian mountaincers in order, who are well known to be an unruly and restless people. I shall hereafter have occasion to speak more of this nation.

The same day, the Emperor sent an officer to the Aldiggerey, commonly called Shaffkal, to notify his arrival in these parts. The Shaffkal is a prince of considerable authority among the mountaineers, and a friend to the Russians.

The 27th, the fleet weighed anchor, and failed, fouth by east, to the bay of Agrachan, so called from a river of that name. In the evening, we anchored in the bay, as near the shore as we judged convenient.

The 28th, the Imperial standard was set up on the shore; all the troops landed and encamped.

were

encamped. The same day, a cossack arrived in the camp with despatches from General Veteranie, who commanded a body of dragoons, giving an account that, in his march, he was attacked by a strong party of mountaineers, near the town called Andrea; that, after a smart dispute, in which . feveral of each fide had been killed, and some wounded, he at last dispersed them, and took possession of the town. These people having previously sent all their families and effects to some distance in the mountains, it seems this rash attempt of these mountaineers was premeditated; for the General demanded nothing but a free passage through the country, and engaged to leave them unmolested. The place itself is of no defence, though they had barricadoed the streets and avenues leading to it. The poor people felt to their cost the effects of attacking regular troops, of which they had never seen any before. However, this was a certain proof of the boldness of these people. Several of them.

were brought prisoners to the camp; they were strong able-bodied men, sit for any service.

The Emperor, before he left Astrachan, had sent manifestos to all the petty princes and chiefs of Daggestan, declaring, that he did not come to invade or make war against them; that he only desired a free passage through their territories, and would pay ready money for what provisions, or other necessaries, they might furnish, and that to the full value; to which some of them agreed, others of them did not. Such is often the case with free independent states, as are those of the Daggestan.

The 29th and 30th were spent in landing the provisions, artillery, &c. after which the whole army and baggage were transported, on boats and rasts, to the east bank of the river Agrachan. This proved a work of labour, there being no woods at hand to make a bridge, nor water enough, at the mouth of the river, to admit our

half-gallies, which were designed for the bridge.

The army being transported over, and encamped on the other side of the river, the Emperor made a plan, and ordered a small fortress to be raised; he named it Agrachan, from the river on which it was built. This place was intended to keep such stores as we could not conveniently carry along with us, and as a place of retreat, in case of unforeseen accidents.

August 2d, the chief named Aldiggery came to pay his respects to the Emperor, who gave him a gracious reception, as he did to several other chiefs, of less note, who came in a friendly manner. The Aldiggerey was accompanied by a small troop of his principal officers; most of them were handsome young fellows, very well mounted. After this chief had staid some hours, and settled matters relating to the march, he took his leave.

In the mean time, the soldiers were employed in raising the works of the fortress;

and ten thousand cossacks arrived from the river Don, all horsemen, under command of Krasnotzokin and other chiefs; and also the five thousand Kalmucks, sent by the Ayuka-Chan, according to agreement, as formerly mentioned. They were all well mounted, and had many spare horses, which were of great use. They all encamped in the plain towards the mountains.

The troops being now all assembled, we only waited for the carriages which the Aldiggerey had engaged to furnish for the artillery and baggage.

During this interval, our great leader, the Emperor, was not idle, but daily on horseback, reviewing the army, which was now increased to more than thirty thousand combatants, including the Cossacks and Kalmucks; a number sufficient to have conquered all Persia, had it been intended. Besides the army which were then assembled, the Aldiggerey made a tender to the Emperor of a considerable body of his

troops, which the Emperor declined the acceptance of.

At length, about three hundred waggons arrived at the camp, drawn by two oxen each; but their harnessing not being such as we were used to, we were not a little embarrassed in setting them a-going.

About the middle of August, the army was put in motion, and marched, in several columns, from Agrachan; leaving there a force sufficient to complete the works, and garrison the place. In the evening, we encamped at a brook of brackish and muddle dy water. This day our road lay about equal distance between the sea and the Tzercassian mountains, commonly called Daggestan.

Next morning we decamped, marched along the valley towards the mountains, and, at night, came to another brook of bad water, where was a little wood of oaks, and plenty of grafs, among which I observed great quantities of a certain herb, called Roman-woormwood, which the hungry.

hungry horses devoured very greedily. Next day, we found above five hundred of our horses dead in the wood and adjacent fields. In our present circumstances, this was no small disaster. The cause was ascribed to their eating the wormwood, which, perhaps, might be the case. We avoided, for the future, as much as possible, the encamping where large quantities of this plant grew.

Yet the dead horses, having been in good case, were not entirely lost, as our Kalmucks seasted on them for several days. It is to be observed, that these people prefer horse-slesh to bees; and, in all their expeditions, their baggage is very compendious, carrying no other provisions than such a number of spare horses as they think they may want. I was often diverted in seeing these hardy people, round a fire, broiling and eating their horse-stakes, without either bread or salt.

The loss of so many horses detained us some hours later than usual; but, as both Vol. II.

3 L the

the water and grass were bad, we decamped, and, at night, came to a spacious plain opposite to the town of Tarku, where the Aldiggerey resides. Here we found fresh water, and good pasturage.

This place is pleasantly situated in a hollow between two high hills, rising, like an ampitheatre, to within a small distance of the top; having a full view of the Caspian Sea. The Prince's house is the uppermost, and overlooks the whole town. It consists of several apartments, with a spacious hall, after the Persian manner, having a terrace and small garden adjoining.

Next morning, the Aldiggerey came and waited on their Majesties, and invited them to dinner, which was accepted of.

Towards noon, the Princess, spouse to the Aldiggerey, came and paid her respects to the Empress, and gave her Majesty a formal invitation. This lady came in the equipage of the country, that is, in a covered waggon, drawn by a yoke of oxen, with a few sootmen to attend her, and escorted escorted by a small party of horse. The lady, though something advanced in years, had still the remains of an handsome person. She had along with her, in the waggon, a young lady, her daughter, who was so pretty that she would have been deemed a beauty in any part of Europe. When they entered the Empress's tent, her Majesty stood up to receive them; they then took off their veils, and behaved with great decency. They were richly dressed after the Persian fashion. After they had drank a dish of cossee, they took leave, and returned to the town.

Soon after their departure, the Emperor and Empress went to the town to dine. The Emperor went on horseback, the Empress in her coach, attended by some of the court ladies, and escorted by a battalion of the guards. The street was so narrow, and near the palace so steep, that the coach and six horses could not proceed quite to the palace, which, when her Majesty perceived, the alighted from the coach, and walked

the rest of the way on foot. The Emperor was much pleased with the romantic situation of the place. In the evening they returned to the camp.

August 22d, the army marched from Shaffkal. The day being exceeding hot, no water to be found on the road, together with a continued cloud of dust, to that degree that we could scarcely know one another, made this day's march very disagreeable and fatiguing to all, more especially to the heavy armed troops and the cattle. Notwithstanding these inconveniencies, the Emperor kept on horseback the whole day, and took his share of whatever happened. At night, we came to some wells of fresh water, where the army encamped; but there was hardly water enough for the people to drink, which obliged us to fend the horses and cattle to a brook at some distance, and a strong party of Cossacks to guard them, lest the enemy should attempt to carry them off.

The next day, we halted at the wells. The Emperor having received intelligence, that a certain chieftain of the mountaineers, named Ussmey, was assembling some troops in order to harrass us in our march, which lay through some hollow grounds; accordingly, towards noon, we perceived a number of horse and foot, on the tops of the neighbouring hills, about three English miles distance from the camp; after they had reconnoitred our disposition for some time, about one half of them, composed of horie and foot, came down into the plain, with intent to drive off some of our cattle, which brought on a skirmish between our irregular troops and the mountaineers, wherein several were wounded, and some were killed, on each side. Our people took many of their foot, and of fuch as had been dismounted, prisoners. During the action, our infantry kept close in the camp. The Emperor rode out to the field; he ordered the dragoons to march, and support the irregulars: On their advancing, the enemy foon

foon dispersed themselves, and sled to the hills, where a considerable number had remained firm on the heights. The carrying off some cattle is supposed to have been their principal aim, as it would not have been less than downright madness in them to have expected to gain any advantage by attacking such an army of veteran troops, well provided and well conducted.

In the mean time, our dragoons and irregulars were in purfuit of the enemy, on the other side of the first ridge of hills, and quite out of fight. The Emperor, being apprehensive of an ambush, and of a large body of mountaineers being lodged on the other fide of the hills, about three o'clock afternoon, ordered the army to decamp, and march towards the mountains, which was performed in fix columns. The Emperor had hourly intelligence of the proceedings of the dragoons and irregulars, who at length entirely dispersed the enemy, and had taken possession of the town where the Prince Ussmey resided. However, it being

1722.

being then too late to return to our former camp, the army encamped that night on a plain between the hills, on the banks of a small rivulet, where we had but indifferent quarters, as there was no more time than to fet up the Emperor's tent, and a few others.

The next day, the army decamped, and marched back to our former camp at the wells, leaving the dragoons and irregulars to manage the rest of the business, who made the Daggestans, particularly the Ussemey and his people, pay dear for their rash attempt of endeavouring to interrupt the march of an army so far superior to any force they could muster. We staid here two days, waiting for the return of our dragoons and irregulars.

The 27th, the troops being all re-assembled, the Emperor decamped, and marched again to the south-eastward, towards Derbent, through a dry parched plain. At night, we came to a brook, near the foot of the hills, where we encamped, not having seen any enemy that day.

The 28th, we marched again, and, paffing a defile, or hollow way, with some difficulty and delay to the carriages, at night we came to wells of brackish water, where we set up our tents, at no great distance from the hills, the sea being about a mile from us to the left hand.

The 29th, being within a short march of the city of Derbent, the Emperor halted to give the troops time to put themselves in order for an entry into the town, as it is the frontier belonging to the Shach of Perfia.

Near our camp there are several pits showing with that bituminous liquid called naphtha. The naphtha here is of a black-ish colour, very inflammable; it is used by the Persians to burn in their lamps, and not easily extinguished by rain: But, as I have formerly spoken of this kind of petroleum, I do not enlarge on that subject here.

The 30th, the army set forwards, the Emperor being on horseback at the head of his troops, which made a sine appear-

ance. At the distance of about three English miles from Derbent, the governour of that place, attended by his officers of diftinction, and the magistrates of the town, came in a body to wait on the Emperor, and to present him with the golden keys of the town and of the citadel, which they did on a cushion covered with very rich Persian brocade; the governour and all his attendants kneeling during this short ceremony. The Emperor received these gentlemen very graciously, and gave them signal marks of his favour. They accompanied him to the city, where, being arrived, the army halted some time; during which guards were placed at the gates, and a garrison in the citadel, under the command of Colonel Yunger, with a supply of cannon and ammunition, both which were wanting in the place.

The foregoing being completed, the Emperor, at the head of his army, marched through the city, and encamped among the vineyards, about an English mile to the Vol. II.

3 M fouth-

fouth-eastward of the town, and about half a mile from the sea-shore.

Soon after, which the Emperor, accompanied by all the general officers, returned again to the city, and examined the condition of the fortifications. On this occafion the Perfian governour made his Majesty an offer of his house, and quarters for as many of the troops as the place could accommodate; but, to avoid putting the inhabitants to any inconveniency, or perhaps for other reasons, the Emperor declined accepting the offer of lodging in the city, and, at night, returned to his camp.

In this fituation we continued some days, and were making the needful preparations for advancing farther into the country, as soon as the transports with provisions, stores, &c. from Astrachan, which were daily expected, should arrive.

They did arrive in safety; but a most unfortunate accident happened; the night following, after their arrival, a violent storm of wind, from the north-east, drove

the greatest part of them ashore, where they were wrecked and dashed to pieces; but, by good providence, not many lives were lost.

This misfortune disconcerted his Majesty's measures, and put a stop to the further progress of his arms for the present, having nothing before him but a country exhausted of all necessaries; and the season of the year being too far spent to wait a fresh supply from Astrachan, the Emperor determined to leave things in the same state they then were in, and to return again to Astrachan, by the same way we came, leaving a garrison at Derbent sufficient to secure the advantages he had gained.

Before I leave Derbent, I shall endeavour to give a short description of the place. It is said to have been sirst built and fortissed, according to the style of the fortisseations of that age, by Alexander the Great; tho' it is not easy to ascertain that tradition, or the aera of its sirst construction; yet, by variety

variety of circumstances, it appears to be very ancient.

The present citadel, walls, and gates, seem to be of European architecture, and no mean performance.

The citadel stands on the highest ground of the city towards the land-side. The walls of the city are built of large blocks of square stone; they reach into the sea, beyond which many huge rocks are tumbled into the sea, to prevent any approach, or passage, on that side. The haven is now so choaked up with sand, that there is hardly entry for a small boat.

Derbent may be called the key to the Persian empire on this side, and serves to keep the mountaineers, and other neighbours on that side in awe. The situation is very pleasant, rising gradually from the sea to the top of the hill, commanding a very extensive prospect, especially towards the south-east. About thirty miles due south stands one of the highest mountains in Persia, called Shach-Dagh, which is al-

ways covered with snow. To the east-ward of the town are many large vineyards, producing plenty of grapes, of which they make a considerable quantity of both white and red wine, of strength sufficient to preferve it round the year, and longer if required. The people of substance there keep their wine in jars, buried under ground, by which method it will keep good for years.

They have also fruitful plains in the neighbourhood, and, at some distance, is a large forest of walnut trees, oaks, &c. As this place is a frontier of great importance, the Sophy of Persia always appoints a person of distinction for its governour.

His Majesty having placed a sufficient garrison in Derbent, which he left there under the command of Colonel Yunger, upon September the 18th the whole army marched back through the town, keeping the same route by which we came. Little of moment occurred on our march, though we were almost daily alarmed by small.

parties of the Daggestans, who frequently made their appearance on the tops of the hills, but fled always at the approach of our cossacks. As we had seen no rain since our landing on this coast, our people suffered not a little from the great heats, continual clouds of dust, and want of water.

On the 29th of September, after a most fatiguing march, their Majesties and all the army arrived in safety at the fort of Agrachan, and found the sleet in the bay where we left them.

October the 1st, we began to ship off the baggage, and what artillery, &c. was not wanted at the fort of Agrachan; in which place the Emperor left a sufficient garrison.

a short view of the country commonly called Tzercassia, or Daggestan, by the inhabitants of the country, from dagh, which signifies a mountain in their language. The country so called is situated between the Euxine, or Black Sea, and the Caspian Sea: These two seas confine it from N. W. to

S. E. Southward it reaches to the province of Gurgistan, commonly called Georgia. It stretches northward into a part of the Stepp, or desert, which lies between Asoph and Astrachan.

The country is divided into several free independent principalities, as Kaberda, Shaffkal, Uffiney, and many others, under their respective chieftains, who are at first elected by the people; and though that office is sometimes known to continue in the family of the person elected for several generations, yet it hath frequently happened, that, either through mal-administration, or in consequence of wars among those different states, a chieftain with his family have been deposed or banished, and another appointed in his place. It hath also been known, that the Sophy of Pérsia hath placed and displaced some of those princes among the Daggestans who lie the most contiguous to Persia. Both the Sophy and the Ottoman Porte lay claim to the fovereignty of Daggestan; but of late years,

these people, trusting to their own valour and the natural strength of the country, pay little regard to either of these mighty monarchs, who sometimes threaten them, at other times court their friendship.

The whole extent of the country is hilly, with some mountains of great heighth; yet, I am informed, they have fruitful vallies, producing corn, vines, and fruits, natural to the climate. Besides a breed of excellent saddle-horses, they have great store of cattle, particularly of sheep, which produce the finest wool I have seen in any part. Whether the samous golden sleece was the produce of these parts or not, I shall leave others to determine.

The men are, for the most part, well made and stout; many of them are employed in the service of the Sophy, and frequently raised to high stations. The Etmadowlett, or prime minister, Aly-Begg, was a native of this country. As to their women, they are esteemed to be the most beautiful of any in Asia, as well for fea-

tures and complexion, as also for fine shape; on which account many of these poor girls are purchased at high rates, or stolen away, for the use of the seraglios at Ispahan, Constantinople, and other eastern courts.

The religion of the Daggestans is generally Mahometan; some following the sect of Osman, others that of Haly. Some of those people are Christians of the Eastern or Greek church. Their language, for the most part, is Turkish, or rather a dialect of the Arabic, though many of them speak also the Persian language.

One article I cannot omit concerning their laws of hospitality, which is, if their greatest enemy comes under their roof for protection, the landlord, of what condition soever, is obliged to keep him safe from all manner of harm or violence, during his abode with him, and even to conduct him safely through his territories to a place of security. With which I conclude what I have to say of the Daggestans.

Vor. II.

On the 5th of October, his Majesty and the Empress went on board their galley, the fleet being ready, and all the troops embarked.

Before I quit Agrachan, I am desirous of bringing the reader, in some measure, acquainted with the character of the magnanimous commander of this expedition, during which I had daily frequent opportunities of feeing that great man Peter the First; and, during the whole time, was in company, and converfed with those people who had attended his person for very many years; several of whom possessed, in some degree, his favour, and were well regarded by him. Therefore, I hope, what I am about to offer, concerning this great monarch, will not be unacceptable to the candid reader, whose taking in good part what I shall fay, I have some right to expect; for i shall lay nothing of fact, but what is true, nor any thing of opinion, but what is fincere.

Several

Several foreign writers have misrepresented and traduced the real character of
Peter the Great, by relating mean stories,
picked up at ale-houses, and circulated among the lowest class of people, most of
them without the least ground of truth,
whereby many people of good understanding have been missed, and, even to this
present time, look on him to have been a
vicious man, and a cruel tyrant, than which
nothing can be more the reverse of his true
character.

Though he might have had some failings, yet it is well known, to many living
at the time of my writing this, which is above thirty-seven years after his demise,
that his prudence, justice, and humanity,
very much over-balanced his failings;
which principally, if not solely, arose from
his inclination to the fair sex.

I shall here take the liberty to insert a passage or two, which, though trisling, yet as so great a personage is the subject, will not, I trust, be altogether unacceptable or

unentertaining to the reader, as they are instances of his assiduity.

About the middle of October 1714, I arrived at Cronstadt in an English ship. The Czar having notice of the ship's arrival, came on board the next morning, from St Petersburgh; being attended only by Dr Areskine, who was his chief physician at that time, and on that occasion ferved him as interpreter. After his Majesty had inquired news about the Swedish fleet, &c. he eat a piece of bread and cheese, and drank a glass of ale; then went on shore to visit the works carrying on at Cronstadt; and returned, the same evening, in his boat, to St Petersburgh, distance about twenty English miles.

The first winter after my arrival at St Petersburgh, I lodged at Mr Noy's, an English ship-builder in the Czar's service. One morning, before day-light, my servant came and told me that the Czar was at the door. I got up, and saw him walking up and down the yard, the weather being serverely

verely cold and frosty, without any one to attend him. Mr Noy soon came, and took him into the parlour, where his Majesty gave him some particular directions about a ship then on the stocks; which having done, he left him.

His Majesty's person was graceful, tall, and well made; clean, and very plain in his apparel. He generally wore an English drab-colour cloth-frock, never appearing in a dress-suit of clotahs, unless on great festivals, and remarkable holidays; on which occasions he was sometimes drefsed in laced cloaths, of which fort he was not owner of above three or four suits. When he was dreffed, he wore the order of St Andrew; at other times, he had no badge or mark of any order on his person. · His equipage was simple, without attendants. In fummer, a four-oared wherry was always attending, to carry him over the river, if he should want to cross it, which he frequently did. When he went about the town by land, he always made

use of an open two-wheeled chaise, attended by two soldiers, or grooms, who rode before, and a page, who sometimes stood behind the chaise, and often sat in it with his Majesty, and drove him. In winter, he made use of a sledge, drawn by one horse, with the same attendants. He found these to be the most expeditious ways of conveyance, and used no other. He was abroad every day in the year, unless confined at home by illness, which rarely happened; so that seldom a day passed but he was seen in almost every part of the city.

I have more than once feen him stop in the streets, to receive petitions from perfons who thought themselves wronged by sentences passed in courts of judicature. On taking the petition, the person was told to come next day to the senate; where the affair was immediately examined and determined, if the nature of it would admit its being done in so short a time. It will naturally sollow, that such free access to his person was not only productive of great relief

relief to many poor widows and orphans, but also a strong check upon judges; and tended very much to prevent any fort of influence prevailing on them to pronounce unjust sentences, for which they were so · likely to be called to account.

His Majesty might truly be called a man of business, for he could despatch more affairs in a morning, then a houseful of senators could do in a month. He rose almost every morning, in the winter-time, before four o'clock; was often in his cabinet by three o'clock, where two private secretaries, and certain clerks, paid constant attendance. He often went so early to the senate, as to occasion the senators being raised out of their beds to attend him there. When assembled, after hearing causes between subject and subject, or public affairs, regarding the interior of the empire, read by the secretary, and the opinion of the senate recited thereupon, he would write upon the process, or upon the affair, under deliberation, with his own hand, in

a very laconic style, "Let it be according to the decree of the senate;" and sometimes would add some particular alterations, such as he thought sit to mention, and underwrote Peter.

His Majesty knew so little of relaxation of mind when awake, that he never allowed his time of rest to be broken in upon, unless in case of fire. When any accident of that kind happened, in any part of the town, there was a standing order to awake him on its first appearance; and his Majesty was frequently the first at the fire, where he always remained, giving the necessary orders, till all further danger was over. This example of paternal regard of the Czar for his subjects, was of course followed by all the great officers, and those of the first quality; which was frequently the means of faving many thousands of his subjects from utter ruin, whose houses and goods, without such singular assistance, must have shared the fate of their ruined neighbours.

In acts of religion he appeared devout, but not superstitious. I have seen him at his public devotions in church many times. I have been present, when his Majesty, not liking the clerk's manner of reading the psalms, hath taken the book from the clerk, and hath read them himself; which he did very distinctly, and with proper emphasis. His Majesty was allowed, by the best judges of the Sclavonian and Russian languages, to be as great a master of them as any the most learned of his subjects, whether churchmen or laics. He wrote a very good hand, very expeditiously, yet the characters distinct enough. Of this I myself am fome judge, having seen many of his letters, all written with his own hand, to Mr Henry Stiles, and others. As to his style, fome of his secretaries, and other competent judges of the language, affirmed, that they had never known any man who wrote more correctly, or could comprise the sense and meaning of what he wrote in fo few words as his Majesty.

Vol. II.

3 O

The

The following I had from a certain Ruse gentleman, of very good family, and who was a general officer of unexceptionable character in the army, who had attended his Majesty, from his very youth, in all his expeditions. This officer being an old friend of mine, I went to pay him a visit one evening, long after the death of Peter the Great, when he told me, that such and fuch old officers, naming them, had dined with him that day, and that the principal subject of their conversation turned on the actions of their old father, (as he termed him, by way of eminence), Peter the Great. He told me further, that, tho' his Majeffy seemed to be severe, on certain occasions, yet no one of them all could produce or recollect one single instance of his having punished an honest man, or that he had caused any person to suffer any punishment who had not well deserved it.

He hath been represented as making too frequent use of spiritous liquors to excess, which is an unmerited aspersion; for he

had an aversion to all sots, and to those too much given to drink. It is true, he had his times of diversion, when he would be merry himself, and liked to see others so; this may have been necessary, and proper, for the unbending his mind from affairs of great weight; but such amusements occurred generally during holidays, and festival times, and was, with him, at no time, of long continuance. It hath been imputed to him, and not without some appearance of reason, that he had political views in encouraging drinking at these times of merriment; for, on these occasions, he mixed with the company, and conversing with them on the footing of a companion, had better opportunities, at such times, of discovering the real sentiments of those about him, than when they were quite cool.

Those who, by their offices about the person of Peter the Great, might be supposed to be the best acquainted with his disposition, always disavowed his drinking to excess, and insisted on his being a sober

the

of the expedition to Derbent in Persia, he was not once guilty of the least excess, but rather lived abstemiously. In this point I could not be mistaken, as the tent of Dr Blumentrost, his Majesty's chief physician, with whom I lodged, was always the nearest tent to that of his Majesty.

I shall give one instance, in proof of what I have advanced concerning the temperance of this great man, viz. In our third day's march, on our return from Derbent, we were kept in continual alarm by considerable bodies of mountaineers, both of horse and foot, whom we saw hovering on the tops of the adjacent hills, though they dared not to come down to the plain, to attack any part of our army, yet it was necessary to be watchful of them; which, ia some measure, impeded our march. The evening of that day, we had a hollow way to pass, which took up much time, and obliged the greatest part of the army to remain there all night; fo that none reached

1722. TO DERBENT.

light horse who attended their Majesties. On my arrival there, about midnight, I found only his Majesty's tent set up, and another small one for Mr Felton, the Czar's principal cook, and master of his kitchen. I went into Felton's tent, and found him all alone, with a large sauce-pan of warm grout before him, made of buck wheat with butter, which he told me was the remains of their Majesties supper, who eat of nothing else that evening, and who were just gone to bed.

During the whole march, his Majesty, for the most part, rode an English pad, about fourteen hands high, for which he had a particular liking, as it was very tractable, and easy to mount. His picture is drawn by Caravac on this horse. He did not wear boots, as he very often walked on foot. In the heat of the day, when the army halted, he used to go into the Empress's coach, and sleep for half an hour. His dress, during the march, was a white

night-

night-cap, with a plain flapped hat over it, and a short dimitty waistcoat. When at any time he received messengers from the chieftains of the mountaineers, he put on his regimentals, as an officer of the guards, being Lieutenant-Colonel of the Preobrashensky regiment.

During the whole course of his life, his Majesty avoided all sorts of ceremony, except on public occasions. His manner of living in his house was more like that of a private gentléman than of so great a monarch. I was once at court on a holiday, when the Emperor came home from church to dinner, with a large attendance of his ministers, general officers, and other great men. His table was laid with about fifteen co-As foon as dinner was ferved up, he and the Empress took their places, and his Majesty, addressing himself to the company, said, Gentlemen, please to take your places as far as the table will hold, the rest will go home and dine with their wives.

On such occasions, the princesses, his children, dined in another room, to whom he sent such dishes, from his own table, as he thought proper, for their dinner.

This great monarch took all the pains, and used all the means possible, in order to be intimately acquainted with every thing proper for a man who ruled a mighty empire, to know. He entered into the detail of every branch of the arts useful to mankind; into that of all the manufactures which regarded the construction of ships, and fitting them for the sea; into that of the making of arms, artillery, &c. If he had a ruling passion for any one part of these acquirements, it must have been for ship-building; into which he entered himfelf very early, in the quality of a common workman, with his hatchet, and proceeded regularly through all the degrees, to the rank of master-builder, which he attained but a few years before his death. After he got that length in the art, he made the draughts, formed the mouldings, and directed the building, of several men of war, of the second and third rates, himself; and he duly demanded, and received his salary as a master-builder. The day of launching the ships, which he himself built, he celebrated as a holiday, and put on laced clothes; but, before he went to work, to strike away the stanchions, blocks, &c. he always put off his fine coat.

He was very frugal in what regarded his personal expences, and those of his household. Notwithstanding his frugality in what related to himself, he spared no cost in whatever concerned the public, in the structure of his men of war, in the artillery, fortifications, arlenals, canals, &c. all which bore marks of very great magnificence. Nor was he sparing in his buildings, and the decorations of his gardens with statues, grottos, fountains, &c. of which the buildings of the summer-palace, and the gardens at St Petersburgh, at Peterhoff, Strealna, Czarsky Sealo, and many others, are sufficient proofs. I shall not de-

tain the reader longer on the subject of this very great man's character, or way of living, than to acquaint him, that, as his Majesty was very early up in the morning, he went abroad generally without breakfast; came home to dinner about eleven of the clock; after dinner, went to sleep for about an hour; after which, if business did not intervene, he sometimes diverted himfelf at his turning loom; then went to vifit those he had a regard for, as well foreigners as Russans, with whom he would be be very sociable, and easy in conversation. He fometimes supped with them; which generally in his latter days, was on hare or wild-fowl, roafted very dry, drapk small beer, and sometimes a few glasses of, wine; and generally was in bed before ten of the clock at night. He neither played at cards, dice, or any game of chance.

The reader will please to take along with him the following observation, viz. That this monarch was, at no time, even during masquerades, feastings, assemblies, and all

Vol. II.

3 P

other 🗀

other diversions or amusements, by day or night, without the attendance of some or other of his ministers, and of those who possessed his considence; by which means husiness, and such affairs as were of the greatest consequence, went on regularly; and some of them even concerted during those times of relaxation.

I now return to the 5th of October 1722; at which time, the Emperor and Empress being embarked on board their galley, and the whole fleet being ready, and the wind fair, we weighted anchor, and got under sail, from the bay of Agrachan, for Astrachan, at which place we arrived on the 14th of the same month, little material happening in the passage, only some rough gales of contrary wind.

Having finished what I had to do at A-strachan, I joined company with Simon Gregoritz Narishkin, one of his Majesty's General-adjutants, and Commodore Cossiar, who always commanded the ship in which his Majesty hoisted his stag, when

he went to sea; and with those two gentlemen returned to Mosco.

Accordingly, we set out from Astrachan in a small shallop, and came by water to the town of Zaritzina. The winter approaching, we got fuch carriages as the place afforded, and continued our journey, along the lines, to the river Don; these lines are drawn from the Volga to the Don, being a deep ditch, about thirty feet broad, pallisadoed on the top, with high wooden towers at certain distances, in sight of each other, well guarded. They effectually answer the end proposed by his Majesty, in erecting them, and making the ditch, which was for the preventing of incumons from the Cuban Tartars.

The 25th of November we arrived in Mosco; at which place his Majesty and the Empress arrived about the middle of December 1722.

The following are the post-stages and distances between Mosco and Astrachan.

ACCOUNT

OF MY

JOURNEY

FROM

ST. PETERSBURGH

T O

CONSTANTINOPLE,

AND THENCE

BACK TO ST. PETERSBURGH,
IN PART OF THE YEARS 1737 AND 1738,

UNDERTAKEN AT THE INSTANCES OF

COUNT OSTERMAN,

CHANCELLOR OF RUSSIA,

ANDOF

MR RONDEAU,

MINISTER FROM GREAT BRITAIN AT

THE COURT OF ST. PETERSBURGH.

ACCOUNT

OF MY

JOURNEY

TO

CONSTANTINOPLE.

between Russia and Turkey, which had been carried on with great success on the part of Russia, by their taking from the Turks the strongly fortified cities of Asoph, Otzakos, together with the Perecop, and other places of the frontiers of great importance, the Emperor of Germany, through various connections, came, some time after its commencement, to be engaged in it.

Vol. II.

490 A JOURNEY TO 1737.

In the autumn of 1737, a congress was appointed to be held at Nemiross, a town on the frontiers of Poland, in order to accommodate and determine all disserences between the belligerent powers, by the mediation of the ministers of Great Britain, France, and the States of Holland, then residing at the Ottoman Porte, who were Sir Everard Fawkner, the Marquis de Ville-Neuve, and Mr Kalkune. But, before these ministers could reach Nemiross, the plenipotentiaries of the powers at war disferred so widely in their respective demands, that the congress broke up without effect.

The court of Russia determining to send a person to Constantinople, with new proposals of accommodation; and, as no subjects of Russia or Germany are admitted into the dominions of the Grand Seignor, while he is at war with those powers, I was prevailed upon to undertake the journey, at the earnest desires of Count Osterman, the chancellor of Russia, and of Mr Ron-

deau,

1737. CONSTANTINOPLE, 491

deau, at that time his Britannic Majesty's minister at the court of St Petersburgh.

On the 6th of December 1737, I fet out from St Petersburgh, with only one servant, who, understood the Turkish language. Having, in a former journey, taken notice of the places on the road between St Petersburgh and Mosco, I wave the repeating them.

The 9th, I arrived at the city of Moseo, which had greatly suffered the preceding summer by a dreadful conflagration. As I purpose, at the end of my journey, to give an account of the stages and distances, I shall here only mention the time, and chief places through which I pass.

The 11th, I left Mosco, early in the morning, and proceeded to the south-west towards Kioss.

The 12th, in the night, I came to Kalugua, a large and populous town, fituated on the banks of the river Ocka, inhabited by several substantial merchants, very con-

492 A JOURNEY TO 1737.

siderable dealers in hemp, pot-ash, wax, &c.

The 15th, I got to Siesky, another town, which is reckoned to be at about equal distance from Mosco, and from Kioss, and is the last town in Great Russia, bordering on the Russian Ukrain. At night I reached Glukova, the first town in the Ukrain, a large and populous place, where, having changed horses, I proceeded thence the same night to another town called Korolevitz.

The 16th, I passed through Batturin, a large rambling town, formerly the residence of the Hetman Mazeppa; it stands on rising hills upon the river Semm. The country adjacent is very pleasant, and exceeding fruitful, being mostly plain, interspersed with woods of oak and other timber. The place is almost encompassed with cherry and other fruit trees. What is remarkable, and demonstrative of the great sertility of the soil, is, that they have about sixty water-mills for grinding corn, all

built

1737. CONSTANTINOPLE. 493

built within the distance of two English miles.

At night, I got to Neshin, another confiderable town. At this place, for want of snow on the ground, I was obliged to leave my convenient sledge, and ride all the rest of the way on horseback. This detained me much longer on the road than I should have been, if I could have proceeded in my sledge.

The 18th, I passed the Borysthenes, in a boat, and, in the evening, arrived at Kioss, situated on the west bank of the Borysthenes, now called Dnieper. This famous river takes its rise on the borders of Poland, near the city of Smolensko, and, after a long course pointing to the south, discharges itself into the Black Sea, near Otzakoss.

The city of Kioff stands on a high hill, and overlooks the river, and a spacious plain to the eastward, as far as your eye can reach. To the westward, the country is hilly; and many of the hills are covered with woods. There are several vineyards

494 A JOURNEY TO 1737.

about the town, which produce good grapes for the table.

This place is adorned with many magnificent churches, and is famous for being the repository of saints, and holy men of the Greek church, whose shrines are visited by devout persons from distant places. Besides, they have an university at Kioss, of considerable repute in these parts.

I cannot but observe here, that this part of the country, commonly called the U-krain, (though it is sometimes called Little Russia,) doth, for sertility of soil and rich pasturage, exceed most parts of Europe, producing vast quantities of various sorts of grain, the crops of which are always very great, as well as of hemp and slax, of the most excellent quality, and that with little labour; for they plow the ground with one horse only, and with but one man, who holds the plow, and drives the horse at the same time.

The Ukrain produces good horses for the saddle, and large sized black cattle, in very great numbers, more than sufficient for their own use, and for supplying their neighbours, with as good beef as the world affords. The woods are well stored with game of divers sorts, as are the rivers and ponds with fish. Asparagus, which in other parts requires cultivation, grows naturally in such plenty in the Ukrain, as to be termed a weed. The people are very civil and hospitable among themselves, and also to all strangers, living very clean and neat in their houses. I now resume my journey.

At Kioff I met with my worthy friends General Romanzoff, and the privy counfellor Mr Neptuof, who gave me all the affiftance and despatch I could desire. They ordered a lieutenant and a troop of coffacks to eleort me through Poland, to the confines of Moldavia.

On the 20th, I set out from Kioss, and at night came to the frontier town, called Vassilkoss, which stands on the declivity of a hill, and is the last town belonging to Russia in that part. The place is but small,

496 A JOURNEY TO 1737.

small, though well fortified, and provided with a strong garrison, &c.

The 21st, early in the morning, I left Vassilkoss, accompanied by my trusty coffacks; and, after riding about an hour, I came to the borders of Poland, where is an out-post, and a strong guard of Russian soldiers. This place is called the Zastave, very necessary in time of war. The territory of Poland is divided here from that of Russia by a deep ditch drawn across the middle of a spacious plain.

rom the Zastave I continued my journey, in a strong frost, which made the road very rough, and, keeping to the southward along the same plain, I saw neither house nor tree till I came to Belozerkoss, the first town appertaining to Poland in this part. The gates being thut before my arrival, it was some time before I could be admitted. However, at length the gates were opened; I took up my quarters at a public-house belonging to a Jew. The same evening I waited on Mr Bechersky, the governor, and desired he would give me a passport.

He

He treated me with great civility, and ordered the passport to be ready against the next morning.

The 22d, by the excess of the governour's hospitality, I was detained till the evening, waiting for his Excellency's passport, which was absolutely necessary, and proved of great use to me on the road.

The town of Belozerkoff, so called from a white church there, is a pretty large place, and is fortified. It stands in a pleasant plain. The inhabitants are, for the most part, Poles, mixed with not a few Jews, who keep public-houses, and are generally farmers of the revenues all over Poland. There is scarce a village without some Jews, who keep inns for lodging and entertaining passengers.

In the evening, I took my leave of the kind governour, who, after treating me with great politeness, gave me a guide to the next village, called Shamaryaska, about two Polish miles distant from Belozerkoss, where I lodged that night.

The 23d, early in the morning, I left Vol. II.

3 R this

this village, in a strong frost, without any snow, and, after passing a few straggling villages at night, I came to Goloquast, where I took up my lodgings at a Jew's house. It is to be observed, that the country is mostly plain, with some rising grounds, interspersed with woods of oak, ash, and elm, and other forts of timber, but chiefly of oak; is very pleasant and fruitful, but thinly inhabited; which must proceed from their being exposed to the incursions of the Tartars and Haydamacks, who at times make cruel inroads into these parts.

The Haydamacks were, the foregoing winter, at this place, with a body of five or fix hundred horse, where they committed many disorders; after which, and after having tortured all the Jews they could light upon, to oblige them to discover their money, they marched off with their booty, before the Polish troops could be assembled to oppose them.

I was well informed, by people who knew something of these lawless banditti,

who are called Haydamacks by the Poles, and Zapourosky cossacks by the Russians, that they are a parcel of vagabonds, composed of idle fellows of different nations, who, having sled from justice, find a safe retreat among this crew. They are, for several reasons, protected by the Turks, who lay claim to the islands, and places adjacent, on the river Dnieper, where they inhabit, and have fortissed themselves so strongly as not easily to be attacked; nor can they be attacked without danger of breaking peace with the Turk.

have no wives nor any women among them, having erected themselves into a wild kind of military order, if it may be so called. Every person, who is desirous of entering into this community, is obliged to serve a certain number of years, before he is admitted into the brotherhood. The grand master is called Casha-var, which signifies chief cook, who is chosen from among the fraternity for his conduct and

courage. I think I need not enlarge on the subject of such a worthless society.

The 24th, I left Goloquast, and came towards noon to a small town called Pogrebisha, where I halted. The people, at first sight, taking my cossacks for Haydamacks, shut the gates, and alarmed the place. My passport soon convinced them of their error. After a short stay, I proceeded again on my journey. At night I reached a small village, named Otzeredno, where I lodged.

The 25th, leaving Otzeredno, I got to Vitofftzy, another village, where I lay that night.

The 26th, I arrived at Nemiroff, where the late congress was held, as I have mentioned above. This town is pretty large and populous, well fortified and garrisoned. The governour is General Russotsky, who hath Colonel Wangenheim, and several other German officers under him.

The country about Nemiross is very pleasant and fruitful, having many orch-

1737. CONSTANTINOPLE. 50%

ards in the neighbourhood, which produce the largest apples and pears that I have ' seen any where. They have also plenty of grapes, very good for the table.

The 27th, about noon, I set out again on my journey. I got that night to the village Petzory, where I remained that night.

The 28th, I halted at Spikoff, travelled thence to Lefkovitz, a large village, where I passed the night.

The 29th, I haited at Tamaz-poly, and lodged at Kleimbofka.

The 30th, I arrived at Tzikanofka, the last place belonging to Poland on that frontier. It is a large straggling village, situate on the east bank of the river Ister, now called Dniester, and is the boundary between Poland and Moldavia. On the opposite shore stands the town of Soroka, the first in the principality of Moldavia, now annexed to the Turkish dominions. The same evening, I sent my man to Soroka, to acquaint the commandant or Perkulab, as they are called, of my arrival.

Next morning, the 1st of January 1738, · the commandant of Soroka, whose name is Petroky, a Greek, came over upon the ice to visit me, and told me that he was very sorry he could not let me pass without a special order from the Prince of Moldavia, who resides at Yassy, to whom he would immediately despatch an express for that purpose; and hoped I would wait patiently for an answer. In the evening Mr Petroky paid me another visit; he showed me much civility, and brought me a present of wine, fruits, ozc. which was very acceptable in a place where little was to be got for money.

January 2d, Mr Petroky acquainted me, that his express was returned, with orders from the prince to furnish me with horses, and a proper convoy, to Yasfy.

Having no more occasion for the coffacks, I sent them back again to Kioss; but Mr Noross, the lieutenant, was permitted to accompany me to Yassy. This gentleman is an officer of a marching regiment.

The cossacks had their own officer besides.

Soroka is but a small town, pleasantly situated on the west bank of the river, about thirty leagues south-east from Chotyn, and the same distance north-west from Bender. The place is inhabited chiefly by Moldavians, mixed with a few Greeks, Jews, and Turks. It is defended by an old tower, in which are some cannon of little use. The channel of the Dniester runs deep there, between two high green banks. The country adjacent is fruitful in grain, and abounds in very rich pasturage.

The 2d, early in the morning, I left Tzikanofka, and passed the river on the ice to Soroka, where, the horses being ready, I took leave of the commandant, Mr Petroky, and proceeded on my journey. Towards noon I halted at a large village called Kaynar. The preceding summer many of the inhabitants of this place were carried off by the plague; but it was now, by the rigour of the season, much abated.

As foon as the horses were changed we left Kaynar, and, after travelling over a very fine country, came at night to another large village, called Meygura, where we lay.

The 3d, I left Meygura. After passing the river Pruth, I arrived, in the evening, at Yassy, where I found good and warm quarters.

Next morning, being the 4th, I was conducted to the palace, and waited on the prince, who is also styled Hospodar of Moldavia. He takes the title of Serene Highness, though he is only promoted to that dignity by the Sultan, or rather by the Grand Visier, and holds it only during pleasure, being trusted with no other power than the administration of civil affairs. His name is Gregory Ducas, of a reputable Grecian family; he enjoys a general good character. This gentleman treated me with great civility and politeness, regretted that it was not in his power to allow of my going directly to Constantinople, and that I must

must go to Bender first, where I should find the Scraskier, who had the chief command in these parts. I was not willing to go fo far out of my road; but, as there was no remedy, I complied. The prince ordered a Bosniac captain, and two Mostavian soldiers of his guards, to eleort me to Bender, which was all he could do for me in the present juncture of affairs.

From Soroka to Yasly the country is somewhat hilly, the foil rich, the pasturage excellent. About the river Pruth are fine woods of various forts of timber natural to the climate. About Yassy, and in other parts, there are large vineyards, producing grapes in great abundance, whereof are made considerable quantities of wine, of inferior quality, the greatest part of which is confumed in Poland, and other parts adjacent, for which the Moldavians receive confiderable fums in ready money.

The city of Yassy stands in a spacious plain, on the rivulet called Bachluy, about thirty-five leagues towards the north-west Vol. II.

3 S

from

from Bender; it may contain between two and three thousand houses, mostly built of wood. The inhabitants are Christians of the Greek church. The prince's palace is an ancient pile of Gothic building, of stone and brick; it hath the appearance of a venerable old castle, for which, I suppose, it was intended, as this unhappy country hath been at all times exposed to the ravages of barbarous nations.

The 5th, having taken leave of my companion, Mr Noroff, who returned back to Kioff, I fet out from Yassy, accompanied by my Bosniac captain, the two Moldavians, and my own servant. We came, at night, to a village called Voltzinitz, about ten leagues south-east from Yassy, standing in a fruitful valley, where we took up our quarters.

The 6th, we left this village in the morning, and came at night to Kishanoss, another village, where we lodged.

The 7th, we left Kishanoss. On the road we met with many troops of Tartars, going

going to the castward, on an expedition, notwithstanding the weather was severely cold, with strong frosts. These hardy people accompanied me all the rest of the way to Bender, where we arrived in the evening.

The country from Yassy to Kishanoss is very fine; but, towards Bender, it grows more dry and barren, and doth not appear of so good soil, nor to have so good pasturage, as the countries which I passed through.

The Moldavians are all Christians, and the Sultan indulges them with a governour or prince of their own religion. This privilege they have enjoyed for many years, which may be esteemed no small favour under such an iron government as is that of the Turks. Yet it may be observed, that their yoke is much easier, and their manners much more humanized, than at their first entrance and settlement in Europe, though, I am persuaded, that two-thirds of Moldavia lies waste at this time.

It seems to have been an established system in Turkish politics to depopulate all the countries bordering on Christendom, referving no more than may be sufficient to furnish their garrisons and troops with provisions.

As the plague had raged all the preceding year in the town of Bender, and had almost depopulated the place, about a mile short of the town, we turned off the road, to the right hand, towards the Turkish camp, where the Seraskier, or general in chief, lay in the field, with all his army about him. The general's quarters were strongly fortified, with a deep ditch pallifadoed and mounted with cannon; but the troops were lodged in cells under ground, laid over with flicks and earth, having a hole at the top to let out the smoke, fenced with a dry hedge about it. In this miferable condition these poor people passed the winter. I and my Bosniac captain were conducted to one of these holes, which at night was crowded with Turkish officers

of distinction. Such miseries, and many more, are the frequent attendants on destructive war. The Seraskier's name is Gengy Aly Basha, or Young Aly Basha, though he is now about seventy years of age, and hath the character of a brave and active general.

The 8th, the Seraskier sent his secretary to me, who asked me several questions relating to my journey, and hoped that necessity would be admitted as an excuse for the badness of my quarters. In the evening, the fecretary came again, when he told me, that, in two or three days, their feast of Bayram would be over, and then I fhould proceed on my journey to Constantinople, with a proper convoy. In the mean time, he ordered an officer to furnish me with fuch necessaries as the place afforded. In this no agreeable fituation I was obliged to wait till the feast was over, being five long nights, all the while confined within the precincts of my hut. One alleviation was, the company of my Bosniac captain,

captain, who tarried with me the whole time.

The 12th, in the morning, the secretary came and acquainted me, that the Seraskier had ordered a chivadar, or officer, belonging to the Grand Visier, and two Tartars, to escort me to Constantinople; at the same time, he told me that I might depart when I pleased. This welcome news was very agreeable; for I had been little better than a prisoner from the time of my arrival at the camp; though, I must own, they were very civil, and made me as easy, as the accommodations, and the circumstances of affairs, would admit of.

But it is well known to be a place of importance, being strongly and regularly fortished, with out-works in proportion. It stands in a plain, near the river Dniester, and is frequently mentioned in the annals of late times, for being the place of refuge of that intrepid, inconsiderate monarch, Charles XII. of Sweden, after the Russians

had beat him out of the field at Poltova, in the year 1709.

Notwithstanding the contagious distemper was not entirely ceased at Bender, we had our daily provisions from that place.

As foon as the horses were ready, I mounted, and left this plaguy camp, which is so in a literal, as well as in an allegorical sense. Although our horses were in exceeding bad case, from the fatigues of the last campaign, and from the want of due accommodations, of shelter, &c. during the severe weather that followed, yet we made a shift to come, in the evening, to a large rambling town, called Kaushan, inhabited by Budjack Tartars. It stands south-west from Bender. Here I had good quarters; the people were friendly and hospitable. At supper I sat by an old Tartar, who seemed to be a person of distinction among them. This old gentleman afked me many questions about Europe, through an interpreter, particularly about the illustrious, family of Lorrain, which surprised me not

a little. The first dish that came before us was pilaw made of barley; then he told me, in French, that it was not dressed after the French fashion. This brought on a . conversation between us in that language, which he spoke well, in which he informed me, that, in his youth, being with the Turkish army in Hungary, he was taken prisoner by the Duke of Lorrain, who then commanded the Imperial army. His highness took him into his service, in which he lived many years; and, after treating him with great humanity, at last gave him his freedom, with liberty to return into his own country; which extraordinary favour he acknowledged with great respect and gratitude.

The 13th, having got fresh horses, I lest Kaushan, and travelled to the westward, towards the Danube, leaving the rising grounds, and came along the plain called the Stepp of Budjack, which is slat, dry, barren, and uncultivated; yet there is some good pasture, especially for sheep, of

which

which the Turkish army have left few remaining. At night, we came to Kongly, where are about a dozen straggling cottages, inhabited by Tartars. We made our quarters that night in the corner of a large shed, along with our horses.

The 14th, as there was nothing tempting to detain us at Kongly, we fet forwards very early in the morning, and proceeded along the same barren plain, without seeing a house or tree all that day. In the evening, we came to a Tartar village, called Tartar-Kew, where we were tolerably well lodged and entertained.

The 15th, we left Tartar-Kew, and came in the evening to the town of Hinayl, standing on the north bank of the famous river Danube, called Dunay in these parts. The place is very pleasant, within sight of the Black Sea. The inhabitants are chiefly Turks. Here I was well lodged, and had good bread and wine. The river here is very broad, and divided into several branches, by islands, considerably large; tho, Vol. II. 3 T when

when the river falls into the Black Sea, all the branches are united, and form but one mouth, at its entrance into that fea. The north bank confifts of rifing grounds; the fouth is fenced with high hills. I think the Danube, at this place, may be compared with the Volga at Astrachan, both for breadth and quantity of water. By what I could observe, all the great rivers, from the Volga to this place, have, for the most part, high lands for their western banks, and low stat lands to the eastward.

The 16th, we passed the north branch of the Danube in a boat, to the next island; but the other branches being fast frozen over, we mounted, and rode and walked by turns, the rest of the way, upon the ice; which was, in many places, very rough and uneven, with great ridges, consisting of pieces of ice driven together, and heaped upon one another, by strong easterly winds, and the rapidity of the current. Some of the ridges of ice were at least seven or eight feet high, which obliged us to

walk on foot most part of the way. However, in the evening, we arrived safely at a town called Tultzin, standing on the south bank of the river, four leagues from Ismayl, where we had quarters, and other means of refreshment.

Tultzin is the first town in the ancient kingdom of Thrace, now reduced to a Turkish province, known by the name of Bulgaria. The Bulgarians, who are Christians of the Greek church, live, for the most part, in villages; the towns, in general, being inhabited by the Turks. This place hath an old abandoned castle, seemingly of European construction; and, as it stands among hills, on the banks of the river, the situation is very pleasant.

The 17th, we left Tultzin in the morning; towards noon we arrived at a large town, called Babbadach, standing in a delightful valley, environed by hills. At some distance, from the top of the hills to the eastward, is a most extensive pro-

spect; particularly a full view of the Black Sea.

It is supposed that the Poet Ovid was banished and consined to this place; which must have been no agreeable situation, to a man who had passed his young days in the court of Augustus, and had entered into all the pleasures and amusements of that court, during the time of its politest and gayest period, in the gallantries of which he was supposed to act no inconsiderable part. This amorous Poet's book, De Tristibus, exhibits a melancholy picture of the manner of passing his latter days at this place, so different in climate from the happy temperament of that of Italy.

After changing horses at this place, we set forwards. At night we came to a village called Kaybaly, at a small distance from which we were so bewildered, in a drift of snow, that we lost the road; and, had it not been that the barking of a dog directed us, we must have lain in the sields all night.

The 18th, leaving Kaybaly in deep snow, we proceeded, and came to Danna-Kew, another village, where we passed the night.

The 19th, we travelled through a very fine country, whereon we found very little snow, and came at night to Kabady, where we lodged.

The 20th, we proceeded, and came to a town called Bazar-tzick, and spent the night there. The town is inhabited by Turks, Greeks, and Bulgarians.

The 21st, we came to Provady, a pretty large town, inhabited as the former. We staid there all night.

The 22d, we left Provady; came that evening to Tzengy, where we lodged.

The 23d, we continued our route; halted at a caravansera, four leagues from Tzengy, and after that at a town called Aydoss; where, having changed horses, we proceeded on our journey, and slept that night at Benglyr.

The 24th, we came to Kanara, and lay there. I cannot but take notice of this fine country,

country, adorned with many beautiful woods and coppices, a very rich soil, and excellent passure; but a great deal of it lies waste; and it is but thinly peopled.

The 25th, we came to the town of Kirkgliss; from thence to that of Burglass, where we remained that night.

The 26th, we went on. We lodged that night at Tzorley.

The 27th, we reached the town of Silivry, which stands on the White Sea, or the sea between the Dardanells and the port.

The 28th, we passed through a large town, called Buyk-tzeckmidgy; from thence the last stage to Constantinople.

I must here take notice, that, at Silivry, I was met by another chevadar, who, instead of conducting me directly to the city, as I expected, turned short to the left hand, out of the high road, carried me through by-paths, over steep and moorish hills, uninhabited, till at last we came to a little village, on the top of the hill called Kara-

1738. CONSTANTINOPLE. 519.

mackly, where is a neat country-house belonging to Mustapha-cassa Basha, the chief butcher to the Sultan, a place of great trust and honour.

I was lodged in the Basha's house, and met with a friendly reception from his kaya, or steward, who furnished me with what necessaries I had occasion for. In the mean time, I waited patiently for the return of a messenger whom they had defpatched to the Basha. This place stands very pleasant and airy, within the view of the city, and is a retreat for the Basha, and his family, in times of the plague

It will be readily imagined, that I did not much like being carried out of the common road. But, without asking questions, I followed my conductors.

The 29th, the messenger returned from the city, with orders that I should proceed, which was very welcome news to me. Accordingly, we set out about ten of the clock. Towards noon, we arrived at Constantinople. They conducted me

directly to the house of Musepha Basha, who received me with great civility. And, after asking a few questions relating to my journey, he then defired that I would wait till such time as he should acquaint the Visier of my arrival. Mustapha Basha did not return till the evening. Upon his return, he sent an officer with me to Sir Everard Fawkener, the British ambassador, to whom I was addressed, and in whose house I lodged during my abode at Constantinople.

of my commillion, faither, than that I punctually conformed to the terms of my instructions.

Here, it may be observed, that, although the Russians under Count Lacy, and under Count Munich, were very successful every campaign, from the commencement of the war in 1734, and made great acquisitions on the Turkish frontier, on that side, by their taking Asoph and Otzakoss, possessing themselves of the Perecop and the Crimea,

and carrying their arms, the last campaign, into Moldavia, which was ended by a confiderable advantage gained by the Ruslians at the battle of Chotim; in confequence of which victory, the Basha of Chotim brought the keys of that important fortress to the General of the Russian army, who sent the Basha, and the principal officers under him, prisoners to St Petersburgh; yet the Emperor of Germany's arms in Hungary were by no means fuccessful; the Turks gaining on the Emperor's frontier there, as much as they loft of their own frontiers towards Ruf-Elated by their fucceiles in Hungary, during the last campaign, the Ottoman Porte rose in their demands, and insided on higher terms than Russia thought proper to agree to.

This famous city is so well known, that I need not enter into a minute description, so shall only give a transient view of such remarkable things as occurred to me during my short stay at this place.

Vol. II.

Constantinople is situated in forty one and one-half degrees north latitude, twenty-nine degrees east longitude, upon a point of land, on the European shore, in the province of Romania, and is esteemed one of the most delightful situations in the world; for which reason Constantine the Great chose it for the seat of empire; by whom it was rebuilt and beautisted about the year of our Lord 330.

At a distance, the city makes a very fine appearance, having a great number of gilded fpires and domes, or cupolas, which multiply as you approach; but, when you enter the city, the general irregularity and narrowness of the streets do in no degree correspond with the magnificent appearance it makes at a distance; which is, indeed, the case of many of the cities and great towns of Europe, seeming to be built at random. I have often thought, that, had a Chinese been consulted, he could have taught both Greeks and Romans how to lay out towns, and that by the simplest

rules; viz. Let there be space enough, sufficient breadth of street, and the houses on each side built in a straight line; which rules are observed in all the towns I have observed in China, particularly Pekin. This common error, in laying out towns in Europe, must be owing to the remissness of the government of nations; tho' this great inconvenience, in so grand a city as Constantinople, hath no relation to the situation of the place, yet it is thought by many, I think very justly, that, were the streets of this city spacious and regular, it would in some measure prevent the frequent pestilential diseases with which this place is affected, and which prevail here more than in any other place I know; there feldom passing a year without its ma-, king a dreadful havock among the populace.

This mortal distemper's being almost always, more or less, in this city, may in part be attributed to a defect in Turkish policy, which suffers all ships to enter the

port, without requiring bills of health, at any time; even the ships from infected places are admitted. I do not know but that the belief of predestination, prevailing so universally among the Turks, with whom it is a fundamental article of their creed, may likewise contribute to the continuance of the devastations made, by this terrible disease, among the human species.

A very great nuisance, attending this place, is its being pestered with a great number of nasty dogs which belong to nobody; they kennel in every corner of the streets; it is unlawful to kill them; and they are generally sed, which is looked upon, by many of the Turks, as an act of charity.

It is without dispute a populous city; but far short of the numbers reported by common same, which seldom keeps within bounds in things of this nature. It is true that many strangers resort hither daily, both from Europe and Asia, and many of them remain here; but then it must be

ally by the pestilence and other diseases. I do not think the whole number exceeds four hundred thousand souls. In walking the streets, you often meet with people, who, to avoid conversing with you, walk on the other side of the street, for fear of catching the distemper; and most people endeavour to get to windward of each other; which, with many other inconveniencies, renders the place not very agreeable to strangers.

From Pera, a district of Constantinople inhabited by Europeans, and by the foreign ministers residing at the Porte, there is a fine prospect of the city, and of the Grand Seignor's seraglio; which last stands on an eminence, with sloping gardens, down to the edge of the canal, planted with rows of cypress, and other ever-greens. It hath the appearance of a most delightful place; but, though the walks are well shaded, it is not thought good manners, or even safe, to look at them with a spy-glass.

526 A JOURNEY TO 1738

Opposite to the seraglio, on the Asian shore, stands the ancient city of Chrysopolis, or the Golden City, now called Skutary, a pretty little place.

Along the shore of the Propontis, towards the south-west, runs a ridge of very high mountains, called Olympus, which are covered with snow summer and winter. The mountain of that name, mentioned by the Poets, stands in Greece.

February the 3d, there was a great fall of snow, followed by a strong frost, which continued for the space of fourteen days. I thought myself happy in escaping it; but this weather is very acceptable to the people here, as it tends to stop the contagious distemper.

I shall now take a view of some of the most remarkable structures in and about this ancient city, which are commonly shown to travellers. Indeed there are but few remains of antiquity to be seen at present; for the Turks, according to their principles, desace and ruin every thing that

hath an air of idolatry, as they call it, whether Pagan or Christian. What Christian churches they have spared are converted into mosques.

March 2d, the weather being fine, I made a party with fome friends to ride out and fee the aqueducts, which are curious fabrics erected in order to supply the city with fresh water. They are said to be built by the Emperor Valens. They are now kept in repair by the Grand Seignor. They stand at unequal distances, from sour to seven or more miles to the northward of the city, according to the respective supplies of water from springs and brooks.

The long aqueduct is about feven hundred yards in length, and near thirty in height; it consists of two stories or ranges of arches, one above the other, having about fifty arches in a range, all of hewn stone, neatly wrought.

The crooked aqueduct, so called from its form of zig-zag, runs in this sigure $\vee\vee\vee\vee$; the intent of which is to divert and lessen

the force of the current, and hath a triple range of beautiful arches.

At some distance from this stands the high aqueduct, the most magnificent of all, being near three hundred yards in length, about forty in height, having sour stately arches, with the same number over them. Besides, there are several others of lesser note, which I need not mention. They are all built to convey the water, over low vallies and hollows, to the city.

At night we came to Belgrade, a pleafant village, inhabited by Greeks, where most of the foreign ministers have their country-houses, to which they retire in time of the plague.

The next day we remained at this village, and walked through the woods, to a neighbouring hill, to the eastward, from whence there is a full view of the Black Sea. These woods are of fine oak, beech, and other timber, fit for the construction of a royal navy. They are well furnished with wild-fowl, and various forts of other game.

The

The 4th, we left Belgrade, when, riding to the fouthward, through pleafant woods and fields, we came about noon to a large village, called Buyuck-tercy, standing on the north shore of the canal, or Thracian Bosphorus. This canal is natural, bursting out from the Black Sea, between two high mountains, and runs, in a firong current, about fixteen English miles, to the city, where it discharges itself into the Propontis. The depth is from ten to fifteen fathoms; the breadth from about one mile to half a mile; very well stored with most forts of sea 15th, particularly oisters, of a small kind, but very delicious. The land, on both fides, is very high, with many pleafant villages, along the shore. At the mouth of the canal, where it begins from the Black Sea, the Turks have built two forts to defend the passage, one on the shore of Asia, the other on that of Europe; they may well serve to prevent sudden incursions, but of little use against a strong · Vol. II. 3 X fqua-

squadron of men of war, and an easterly wind.

I was informed that, in the reign of Sultan Amurath, a strong party of cossacks came, in open boats, before these castles were built, or when they were neglected, entered the canal, and put all the city in great consternation. After they had plundered many villages, they returned again to their own country, with little or no loss.

From the Buyuck-terey we fent our horses home, and returned to the city by water. Some days after this I went to see the Sultan, as he came from his devotions at the mosque called Jency-Jamey. He was on horseback, attended by a small troop of spahis on horseback, and some janisaries on foot. Mahmuth hath a good aspect, and bears the character of being of a humane peaceable disposition. This Prince succeeded Achmet, who was deposed, about seven years before, by one named Ali-Patrone, or Kalyll, a janizary, and his affociates, all people of low degree, the next

in command to Ali-Patrone, or Kalyll, as he is commonly called, was Muss-luch, a dealer in melons and other fruits; the third was Emy-Aly. These three chiefs governed the Turkish empire near a month. After they had placed Mahmuth on the throne, they deposed the Grand Visier, and disposed of all offices, civil and military, at pleasure. Ali-Patrone, in the mean time, was very fober, never changing his habit, came every morning to the janizaries hall, where he sat as sovereign judge, and gave sentence on all causes that were brought. before him, without delay; was very charitable to the poor, and rectified many abuses in the state. That magnificent Visier, Ibrahim-Basha, who had introduced printing, fell a facrifice to the rebels.

One action of the Kalyll's I cannot omit relating, as it evinces, that his high station did not produce forgetfulses of his old friends. There was one Janaky, a Greek, a butcher by trade, who had formerly lent Ali-Patrone half a dollar. He sent for this butcher,

butcher, and made him Hospodar or Prince of Moldavia. Poor Janaky would willingly have been excused from accepting so high an office; but his patron insisted on his taking it.

However, these mighty chiefs being intoxicated with power, began to intoxicate themselves with wine also; and they were at length caught in a snare, laid for them by Sultan Geray, Chan of the Crim Tartars, who had been sent for, by some of the grandees, for that end. Sultan Geray succeeded so well, that the chiefs were cut off, the rest dispersed, and the government re-established on the same footing as here-tosore, with very little bloodshed; the particulars of which being, in general, well known, I say no more of that affair.

The next place I was carried to was the mint, where I saw them coining money of different forts. It stands in the outer court of the seraglio.

From thence I went to the famous church of Sancta Sophia, now converted

into a mosque. There being already many descriptions extant of this ancient fabric, I shall only observe, that it was rebuilt and adorned by the Emperor Justinian, about the year of our Lord 500. It is highly esseemed by architects, for the flatness of the dome, or cupola, which, it is said, the moderns cannot imitate.

In time of war, Christians are not permitted to enter the mosque. Nevertheless, we were conducted up a pair of back-stairs to the gallery, from whence we had a full view of the whole. The floor is laid with clean mats and carpets, having no feat, only one pulpit for the Mullah. The gallery is laid with marble, supported by about one hundred marble pillars, of various colours and fizes, most of them, at least, between five and fix feet diameter. The whole of the infide hath a noble and grand appearance. At the entry into the gallery, is an old vestry, with the door closed up, of which a Greek, of my acquaintance, told me the following short story, viz. A certain

certain Mullah being in the vestry, saw, or fancied that he saw, a man on horseback, with a sword in his hand, who bid him begone out of that holy place, &c. This, like other tales of the same nature, was not long a secret, and was interpreted to have been no other than Constantine the Great. However fabulous the story appears, the door of the vestry hath been condemned since that time.

From Sancta Sophia I was conducted to the Hippodrome, where the Greeks used formerly to train their horses to the menage, now called the Att-Maydan, and is still applied to the same use by the Turks. It is a spacious oblong square, having a pretry marble obelisk in the middle. On one side of it is a pillar of brass, with serpents twining round it; this is somewhat defaced, and is about ten feet high.

In the great street, at some distance from the Hippodrome, stands another venerable monument of antiquity; a large and tall pillar, called the Burnt-pillar, because it

hath greatly suffered by fire in the neighbourhood, which hath cracked it in divers places; this is a misfortune common to narrow streets, and not to be remedied without a well regulated police. This pillar is of porphyry, about twenty yards high.

We went thence to see the grand reservoir, built with intent of supplying the city with water in case of a siege. This must have cost an immense sum of money; for it is all of it under ground; above it are streets and houses. It is not far from the Hippodrome. Towards the water-side, the covering of it is supported by a great number of arches, and many hundreds of stonepillars, of which not a few are fallen down, and the whole of it is going a-pace to decay. There was no water in it.

There is another ancient fabric, known by the name of Edikuly, or feven towers, standing on an eminence to the westward; which is now a common prison. Near the middle of the city stands a small tower, called

called Belisarius; whether or not it was the house of that great and unfortunate General, I could not learn.

Opposite to the seraglio, near the middle of the canal, stands a small round tower, upon the summit of a small rock, called Leander's Tower. This, with the foregoing, are the sew remains of antiquity commonly shown to strangers.

The haven, which divides the city from that district of it called Pera, for its extent and depth of water, may probably equal, perhaps surpass, the best in the known world, well fenced on all sides by rising grounds. Near the bottom of the haven is a spacious and most convenient yard for building ships and galleys, with suitable magazines and ware-houses for keeping the cordage, guns, ammunition, and for every material requisite for building and sitting men of war and galleys for the sca.

Adjoining is a place called the bagnio, appropriated to the lodging and accommodating galley-flaves; where, it may be

supposed they do not pass their time very agreeably.

My next walk was to see the dervises at worship; they are a religious order of, the Mahometans, who have a mosque in Pera, built in a circular form, with a pulpit for the Mullah, and a gallery built in a nitch, made in the circle, for the music. The fermon being ended, the musicians began on various instruments, which were like the European flutes and hautboys, upon which five of the dervises stood up, and danced round the mosque, in a frantic manner, turning themselves round, as they advanced, with so quick a motion, that their faces were hardly distinguishable from other parts of their heads. They followed each other at certain distances; but an old man of fourscore years outdid all the rest in quickness of turning round. Yet, when he left off, he did not seem to be at all discomposed by the violence of the motion. This extravagant sect make vows of poverty and chastity, travel over all the east, Vol. II. where

where the religion of Mahomet prevails, and are held in great esteem by the devout of that profession.

The 9th of March, the army intended for Hungary, under the command of Eggeny-Mahomet-Basha, the Grand Visier, began to file off to the camp assigned for them, about three miles to the northward of the city. The procession continued sour days; and, as usual, when the Sultan himfelf, or the Grand Visier, take the field in person, the troops are attended by all the different trades and artisans to the place of encampment, each trade having the proper dress and badges of their respective profession, with banners, music, &c.

The first day the janizaries marched, with their Aga, or chief commander, at their head, followed by a numerous multitude of artisans. The first in procession was a plough drawn by painted oxen, with gilded horns. It would be tedious to mention the rest particularly; I shall only observe, that some of this ragamussian crew made

made frightful figures, being naked to the waste, with sabres run through the sleshy part of their arms, and besmeared with blood—A shocking spectacle!

The fecond day's procession was the pioniers and miners, with their different tools and utenfils.

The third day, the cannoniers marched.

The fourth day, the Visier marched out, attended by the general officers of the army, a great many Spahis and Janizaries, and all the different trades of the town; among which rabble, were many fuch banditti as above described, naked for the most. part of the body, all bloody. The Grand Musti was in the same coach with the Grand Visier, and had the Alcoran carried by a Mullah, who sat likewise in the same coach, opposite to the Musti; which was preceded by a number of fingers, in their proper habits, finging as they went along. Before the coach was carried the standard of Mahomet, which is a horse's tail, said to be brought from heaven by the Angel Ga-

brief to Mahomet, and is held in great veneration, seldom appearing but on great solemnities; after which it is carried back to the seraglio, where it remains till the next occasion.

When war is declared against any prince or state, the horse-tail is set up at the gate of the seraglio, called Alla-Capy, or the Port of God, from whence the Grand Seignor dates all his despatches; and, on that account, the court of the Grand Seignor is commonly called the Ottoman Porte, and the Sublime Porte. But when the Sultan is in the field, at the head of his army, he dates all his letters and orders from his flirrup. All generals who have three horse-tails, are called Visier; but the Grand Visier, who is always prime minister, governs and directs all affairs relating to the state, both foreign and domestic: Next to him in power is the Kaymacan, who is his lieutenant; after him Nisangy Basha, keeper of 'the seals; then Kap-adgee Basha, chief porter; Kislar-agassy, the chief eunuch.

eunuch. These are the principal great officers at court. It happens often, that the
Kislar-agassy hath more to say than all the
rest put together; for although the ladies
live very retired, yet they are not so ignorant as is generally imagined. And, if I
am not misinformed, matters of the greatest consequence are canvassed, and often
settled in the seraglio, before they are presented to the ministry. One thing is certain, that whoever wants a favour at court
needs no better recommendation than a
friend among the ladies.

Soon after my arrival, I had an invitation from the famous Count Bonneval, who then was ill of the gout; but, in time of war, it was not thought fit that I should visit that gentleman.

March 15th, Sir Everard Fawkener went to the camp to take leave of the Grand Visier, as is usual for all the foreign ministers to do, on the like occasions. We different to the tent of this great man, were conducted by an offi-

cer to a magnificent tent, near to that of the Visier, and entertained with coffee, &c. for about a quarter of an hour; after which the ambassador, accompanied by the gentlemen of his retinue, went to the Visier's tent, where a stool was prepared for his Excellency. The gentlemen stood during the time the ambassador remained. The Visier sat, cross-legged, on a sopha raised about half a foot from the floor, which was all laid with rich carpets. Very near him Rood a frame, on which were hung fome muskets, sabres, &c. of very curious workmanship, ornamented richly with gold, silver, and stones of value, as emeralds, rubies, &c. The Turkish camps are, in general, very regular and clean.

The short ceremony being over, we returned again to the city. After some days the Grand Visier marched to Adrianople, in his way to Hungary.

Being about to leave this city, I shall detain the reader with no more particulars than the following short observations.

In Turkey there are few families who have any distinguishing titles or honours appertaining to them which descend to their children. All titles of honour, and places of power and profit in the Sultan's dominions, depend on personal merit, or the Sultan's favour, which dies with the possessor. The only two families who have a just claim to nobility, are those of Dgiggal-Oglu and Kuperly, who, for fignal fervices done to the empire, have peculiar privileges; one in particular, that the Sultan, as it is faid, cannot condemn them to death. It seems that, on a very critical conjuncture, when affairs were in great disorder, the Sultan died, Kuperly kept it a secret for six weeks; in which time, by his prudent conduct, the government was established on a proper footing. Besides these, there are descendents of their prophet Mahomet's family, of which there are great numbers, who are distinguished by wearing green, and enjoy some privileges.

Having nothing more to do at Constantinople, I am now about to return to St Petersburgh. As I had a commission from Sir Everard Fawkener for the Grand Visier, who was then at Adrianople, I took that road.

April 8th, after taking leave of my friends, I set out from Constantinople, accompanied by a tzaush, or messenger, a janizary, and my own servant.

The 13th, in the morning, I came to the city of Adrianople, where I lodged, at the house of Mr Damiral, a Greek gentleman, who is agent at this place for our ambassador, where I found a friendly reception.

The city of Adrianople is about forty leagues north-west from Constantinople, in a pleasant country, inhabited by Turks, Greeks, and some Jews. The Capuchins have also a convent here. The town is pretty large, and is remarkable for having a very noble grand mosque, with very high minorets, of excellent workmanship. The architect was a Greek, of whom it is reported,

ported, that the Grand Seignor, being amazed at the extraordinary contrivance and execution which the architect exhibited in those buildings, thought that nothing of mechanism was out of his reach, and ordered him to make himself wings, and to fly off from the top of one of the minorets, which the poor builder was forced to attempt. After flying a considerable distance, he fell among some tombs, and broke his neck. I do not youch for the truth of the story; but I was shown the tombs in the neighbourhood, among which it is faid that he fell.

The 14th, I had a visit from Monsieur Peisonell, the French agent, and some of the Capuchin Fathers.

The 15th, I went to return the visit at the convent. In coming through the market-place, in the way to my lodgings, I met with a very disagreeable spectacle; which was two men, lying stark naked, without their heads, which had been just before cut off. They were said to have been spies.

Vol. II. 3 Z After discharging my commission to the Grand Visier, which I effected through Mr Damiral, and obtaining an order for post-horses, I lest Adrianople the 17th, and proceeded on my journey to the northward; in which I need not be particular, having mentioned most of the places in the former part of this relation. I took the nearest way for Yasiy in Moldavia.

The 26th, we passed the Danube in a boat, at a place called Kalass, a few leagues above Ismayl.

The 29th, we arrived at the city of Yaffy. The next day I waited on the prince,
who received me in a most friendly manner. He gave orders for horses, and two
of his guards, to conduct me to the frontiers of Poland. He likewise sent an officer to accompany me as far as Nemiross. I
then discharged my tzaush and janizary,
who returned back to Constantinople.

May 1st, I left Yassy, and came the next day to Soroka.

The 3d, I left Soroka, passed the Dniester, and came to Tamas-Poly, where I lodged.

The 5th, I got to Nemiroff, and at this place delivered all my despatches for Europe to General Russotsky, to be forwarded according to address.

The 10th, I arrived at Kioff, and set out again the same day.

On the 17th of May I arrived at St Petersburgh.

It is to be noted, all my dates are old stile.

I shall subjoin a list of all the stages and distances from St Petersburgh to Constantinople. As I have, in a former journey, particularized the stages to Mosco, I need not repeat them here.

THE RESERVE OF THE PARTY OF THE		

VOL. II.

The whole distance from St Petersburgh to Constantinople, I take to be about 1925 English measured miles, of 1760 yards each mile.

The several distances as follow, viz.

From St Petersburgh to Kioss 1051 meafured miles.

From Kiuff to Soroka, the frontier of Moldavia, 253 computed miles.

From Soroka to Yasty 72 Ditto. From Yasty to Bender 81 ditto. From Bender to Ismayl 87 ditto. From Ismayl to Con-

stantinople 311 ditto.

1925

Thus I have finished my fourth eastern journey, which, in all probability, will be my last to that quarter of the globe. I would not advise any man to undertake this last, at such a season of the year as I did, or in time of war.

FINIS.

ADVERTISEMENT.

THE high character which thefe Trawels bear in point of authentic information, and the great variety of curious matter to be found in them, respecting those countriesthrough which the Author travelled, by a route which as yet is very little known, joined to the extreme scarcity of this Book, from the demand for it upon the Continent, were the motives for the publication of this new Edition. The Maps in the former Edition being wretchedly executed, and at the same time quite erroneous and imperfect, the Publisher has substituted in their place new and accurate Maps, taken from the latest and best authorities, particularly the Russian Atlas, in which the Author's route is carefully traced, together with the several towns, villages, and stations, which are mentioned in the course of his Travels.
